Wild Ride —

July, 2016

covering 2016 - 2037

Introduction

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

As an example, the word 'prophecy' may be read up by our software at a sports oriented forum. In that case, perhaps, due to the emotional sums around the context, and the emotional values of the word itself within the lexicon, it would be put into the contextual 'bin' within the database as a 'detail word'. Note that the context of the use of the word in the sports forum is lost in the process and is of no use to us in these circumstances. What occurs is that the word is picked up as being atypical in its context, therefore of high potential 'leakage of future' value. The way this works is that most sports forum language about future events would be statistically more likely to use words such as 'bet' as in 'I bet this XXX will be outcome', or 'I predict', or 'I think that XXX will happen'. So it is the context plus emotional values plus rarity of use within the context that flags words for inclusion in the detail level of the data base. Further, it is worth noting that most detail level words are encountered in our processing mere days before their appearance. Within the IM data primarily, and then within ST data next. But a preponderance are discovered within the IM time period. Perhaps an artifact of our processing, if so, one not explored due to lack of time (cosmic joke noted).

Words are linked by their array values back to the lexicon using our set theory model (see below), and the language used within the interpretation (detail words excepted) derives from the lexicon and its links to the changing nature of contexts as they are represented within our model.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **ALTA report** is an interpretation of the **asymmetric trends** that are occurring even this instant as millions of humans are typing billions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

In our discussions, the interpretation is provided in a nested, set theory (fuzzy logic) pattern.

Definitions:

Aspects/Attributes are: collections of data that are within our broader linguistic structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

Entities are: the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

Lexicon is: at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

composed of: ***emotional qualifiers*** which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

Spyders are: Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

List of entities explored in this report:

GlobalPop

The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

USAPop (and any other nation state/territorial reference)

All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

Markets

The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

Terra

The Terra entity is the master set for all structures that relate to the planet, and the

physical environment of planet earth. This master set frequently and increasingly has extensive cross links to the SpaceGoatFarts entity.

SpaceGoatFarts

This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

Data Types

IM = Immediacy data with forecasting effectiveness from 3 days to the end of the third week. Error range is 4 weeks.

ST = Shorter Term data with forecasting effectiveness from the 4th week out through and inclusive the end of the 3rd month (from date of interpretation). Error range = 4 months.

LT = Longer Term data with forecasting effectiveness from the end of the 3rd month out through and inclusive of the end of the 19th month. Error range = 19 months.

Terms employed:

Cross links – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

Linguistic structure – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

Meta Data Layer – in modelspace, when a meme appears directly held in numerous sets, at the same level of support, it is labeled as a 'meta data layer'. These 'layers' can be thought of as a common linguistic structure that forms with differing supporting sets in the various entities. For clarity, a meme in Terra entity would not have the same supporting sets as that same meme in the GlobalPop entity, but both would be part of the larger meta data layer that the meme reveals.

Modelspace – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

MOM – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

Set – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

Temporal Echo – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

TM = Temporal Marker, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.

Data and Interpretation

Meta Data

At a meta data level the new accretion to modelspace is **not** forecasting this to be a lazy, hazy Summer. Rather the whole of this report is titled Wild Ride for the explicit references to a very 'intense emotionally charged' Summer this year.

Modelspace has repeated sets going to 'financial distortions', and 'deviations' and other linguistics that go to the idea of the 'ultimate pollution' of the 'officialdom numbers' by their own 'lies'. The data sets are continually putting 'lies' in the data chains for support for most sets involving 'financial' matters. The data further, across the meta data layers, is being 'overwhelmed' by the 'intrusions' of the 'false data' into the 'officialdom numbers'. The idea at its core comes to a 'threshold' having been 'past' as the 'mechanisms' of both 'government' and 'finance(banking/commerce/insurance)' are now so totally 'distorted (by lies)' as to prevent 'operations' at mostly 'any level'.

Among areas that are showing as being 'distorted' are the 'energy (oil/gas et al)' levels. Yes, there is certainly a glut at this time, however as modelspace is progressed through 2016 and into the middle of 2017 the focus has already shifted to 'dwindling supplies' and even more than the 'rising prices' which were already showing for 2016, the data sets are referring to 'lack of production' and 'loss of production capacity'. These are emerging meta data layer memes as they are showing as directly held values in many of the entities and are continuing to add new aspect and attributes sets.

Terra

Of course the planetary 'expansion' continues to make headlines in spite of never being mentioned in any of the thousands of articles which explicitly confirm its details. Within the new data sets we also have continued growth for 'yet major episodes' of 'expansion terra (in dynamic motion)'. These 'terra-dynamic' are indicated to include yet more 'long running rifts (tears in the crust)' that will be 'revealing' themselves in major 'alterations' to 'continental topography'.

The data sets are continuing to forecast yet more, and 'new' volcanoes that will be 'pushing' the 'populations' of the planet around as the 'new lands' meme is also showing growth via 'eruption' and 'new land forms (made from lava)'.

These new sets are also including heavy references to 'Japan' for 'new volcanoes'. Additional areas in the greater Pacific basin including 'Hawaii' are indicated to also participate in the 'new lands' events albeit in differing forms. In the case of 'Hawaii' the data accretion patterns are showing that 'waves' and 'abnormal currents' will be the first indicator for the 'island populations' that 'something new rises'. In these sets there are forecasts for 'new channels', and 'new current patterns' indicating that 'new lands (are just below the surface)'.

Many of the 'new volcanoes' and 'rising (sub sea) lands' are also cross linked internally to the 'cracks', and the 'stitches (of the sinkholes)'. The majority of these are cross linked over to the GlobalPop entity. A significant minority of these are also cross linked over to the Markets entity. The implication is that the planetary expansion 'pulse' that we are currently riding has the potential to 'shift populations' (from Terra entity), and 'destroy (financial) empires' (from Markets entity).

Winds, oh the winds...at least what the data sets are forecasting to be a new, and (to some) 'annoying' part of the 'new life of planet Terra'. 'Straight line winds', 'twisty winds', 'tornadoes (in strange places)', 'wet, heavy winds', 'straight down winds', 'horizontal winds (for hundreds of miles....aka 'wind tsunami')' and any other form of language imaginable is being applied to 'winds' in these new data sets. Many of these 'wind' references are also 'storm associated', but there are several, including the 'straight down', and the 'straight-line winds' which are described as 'clear *(no storm)', and 'deadly powerful'.

The 'winds' sets are growing and are extensively cross linked over to many of the other 'planetary changes' sub sets.

The Terra entity is adding a few new wrinkles to the old stand-by of 'floods'. We have 'flash floods' showing up in a large number of sets within the Terra and other entities. These 'flash floods' are going to appear on 'five continents' over these next few months as the 'flooding (rivers from the sky)' meme gains its new strength in manifestation. These 'flash floods' are showing in 'rural areas', and 'cities'. In all the sets there are supporting sub sets for 'cars' and 'people' and 'animals' being 'swept away' by the 'muddy waters rushing down'. These sets include many descriptors for 'damage', and 'road destruction', and 'landscape erosion'. In several of the sets are pointers to the idea that 'videos' of 'major highways' acting as 'instant river beds' will be appearing in some numbers as 'tourists' and 'locals' are 'fighting for their lives' while 'rivers (from the sky) dump water beyond our ability to grasp'.

Other problems cited as arising from 'flash floods' include 'train wrecks', and 'track dislocations', and 'flooding (of government facilities (trapping vehicles, people, and stuff))', and 'scouring (away) building foundations'. Many of the detail sets within the 'flash flooding' show that a large number of 'vehicles (cars trucks et al)' are going to be involved in one of these events in that the 'flooding' is showing as 'washing away (thousands of) cars'. Further, the data shows that these 'cars' will be 'floaters' and 'navigation hazards' for 'years' after the 'flash flood' event.

The 'flash flood' supporting sets for the 'flood' set are also indicating that 'ports' will be 'scrubbed away' from the 'land' and that 'ships' and 'boats' will not be 'able to dock' due to 'damage' to 'facilities'. Many of these sets are specifically focused on 'river ports'. The 'mountains backing' the several 'river ports' indicated to 'be washed out (into the river)' are all described as 'blocking and cupping' the 'torrential (river) of rain' as it 'continues to pour out'. These 'cupped river ports' are many, with 9/nine separate descriptor sets able to be separated out.

Yet again, in all three data types, long, short, and immediate, are gaining new sets for 'mining' and the problems that are going to 'roll over' the 'mine landscape'. These new sets are a 'primer' in the 'stretching effects' from 'earth' and their 'impact' on the 'below ground activities' of humanity. The 'stretching' sets are showing that 'mines' and 'drilling operations' are being singled out to receive 'operational impediments' and 'obstacles' as the 'earth expands'. Note that the upside is showing up in the form of longer term aspect/attribute sets that are forecasting a 'resurgence' in 'mining' in the future (not near term, longer than a decade) when the 'new mineral deposits' that are now being pushed up into

the 'crust and the bottom of the oceans' by the planet become 'discovered'.

There are still new growth areas in sets for 'underseas (new) lands' as well as 'rising lands', with this latter now also including 'new (rising) lands' that will 'jut up' from within 'dry land'. These sets are suggesting that 'passing motorists' will be able to get video of the actual moment of the 'new plateau' emerging.

Many of the 'expansion of earth' and 'earth changes' sets are growing with 'impacts' on 'drilling' and 'extraction' of 'oil'. The data sets are describing situations where 'proven reserves' will 'disappear overnight' very much like 'sinkhole drained lakes'. A similar effect is the root cause for the 'disappearances' of 'vast oil pools'. Some of the sets referencing these 'vanishing national resources' are also showing that 'regional wars' will be 'threatened' there are going to be 'suspicions (of illegal) slant drilling', and other forms of 'oil theft'.

As modelspace is progressed through the Summer (northern hemisphere), new sets appear for 'yet more occurrences' in the 'rupture (of) below ground (storage places)'. The data sets are showing that 'earth expansion' is going to 'rupture' all kinds of 'underground storage' at the 'micro level (think local gasoline station) and the macro level (pipelines and giant salt domes filled with fluids/gas)'. Modelspace picks up a number of these sets for 2016 such that the 'diaspora' memes are triggered by the 'eruptions (of material from underground)'. Some of these 'underground eruptions' include language for yet more 'gas leaks' that will be the result of 'ruptures' in the 'rocks'. Noting some of the detail sets are suggesting that 'miles of distance' will be 'separating' the 'storage site' and the 'actual emissions'. This is indicated to cause all sort of 'confusion' within the 'human social order' around these 'leaks' as some of these areas are thought to be 'mass mental illness'. While true, the data nonetheless shows that the 'mass mental illness' was 'legitimate' in that the 'population' was being 'gassed'.

Other aspect sets in these groups show that the 'ruptures' are going to include 'storage' of 'waste', including 'nuclear waste', and other 'hazardous materials'.

The data sets are forecasting that the 'heat' and 'cold' oscillations will be causing all manner of 'fires', and 'freezing(s)' at a globally. The data is forecasting that the 'fires' will be on multiple 'continents' simultaneously. There are many sets for the 'formation' of 'globe circling fire fighting brigades'. Note that the data reinforces the idea of 'brigades' as being on the order of 5/five thousand members.

The 'freezing(s)' sets are presenting a number of sets that show that even 'military bases' are going to be 'shifted' or 'altered' by the oscillations as they produce 'incredible cold' that is described as 'striking' like 'lightening' in 'very strange places'. These 'lightening strike cold fronts' are also described as causing an 'instant deep freeze' effect in many, disparate places. These places include the 'very high', but also, some 'low land deserts', and 'coastlines'.

Also affecting 'low land deserts' are several linguistic structures forecasting that 'salt water intrusions' will take place. These are into 'dry desert conditions' and 'deep inland'. The idea is that a 'sub sea sink hole' will be 'draining deep ocean water' into 'under continent fissures' which in turn will then be 'pumping' the 'ocean out (into) the desert sun' to much 'amazement' globally.

GlobalPop

Revolution is the operative idea at any level of humanity's journey over these next 18/eighteen months.

The data sets are showing that the 'hyperinflation' of the 'major currencies' is forecasting a 'ricochet' of the 'human energy' back into the 'revolution' meme.

The data sets are forecasting that into 'a particular someone's life' a 'politician will fall'. Noting the ambiguity of the sets so far, it would seem to be a bit of a ways off in time, but the idea is quite clearly of a 'falling politician' who will 'land (on someone's) house'. No indication just yet as to what the 'politician falls off from', but the result of the 'impact' will be 'shattered roof beam', 'ruptured walls', and a 'big, gooey mess'.

Other sub sets for 'revolution' include 'political revolution' as 'immigration' becomes 'invasion', and 'resistance' becomes 'violence'. The data sets yet continue to have new growth for 'battles' between 'government versus citizens', and 'government versus immigrants', and 'government versus other governments', and 'governments versus (some other part of themselves)'. These many sets are also extensively cross linked within the GlobalPop entity over to sub sets showing that 'food pressures' coming later in Fall (northern hemisphere) 2016 are also going to be bringing about a situation of 'government versus damn near everyone' as the 'shortages' created by 'bad growing weather in 2016' cause something to 'fail to show up to a shelf near you'. These 'food shortage' sub sets are, at the primary level of support for GlobalPop described as 'exacerbating' the 'already tense' situations around 'politics' in many western countries at that time, and being 'triggers' for 'massive street demonstrations' that will precipitate 'large scale (political) calls' for 'reform'. The data notes that these 'soon-to-be occurrences' are even as you read this report, being 'engineered' in a 'darkened room' somewhere below ground.

A number of new sets in the 'revolution' major set include a curious, and well structured sub set for 'ocean life' as in 'humans choosing to live full-time on boats' is rising across a large number of the more discrete geo-political subdivisions within GlobalPop. These new 'ocean life' sets are rising in both number and emotional intensity, as well as spreading out across the data types. It may be that a general new 'meme' is developing across the generations' for 'boat people life'. These sets are also showing as being a 'problem' for both the 'officialdom of the planet' as well as the 'markets' of the planet. In cross linked sets over to the Markets entity, there are a number of sets pointing toward (a relative) better success for 'boat companies' globally, as well as the emergence of a (tentative) '(near and coastal) cruising boat market' developing in China. This latter also has indications that it is being 'supported' at least at some level by 'central authorities' within the 'chinese state mechanism'. The 'ocean life' sub sets have substantial emotional values at this point and continue to gain new aspect/attribute sets bringing in higher levels of emotional intensity. The overall impression is that a 'some form of unknown event string' is going to 'captivate' the 'global public attention' in such a way as to generate 'funding sources' for 'ocean life activities'. It may well be the 'new lands rising' sub sets are correct in showing that a strange form of 'land rush' develops over 'mineral resources being 'brought to the surface', however the end does result, the process will bring a number of years of greater focus on 'ocean impacts (on humanity)' as the 'earth expansion effects' continue to 'shape' the 'next world' we will all live in some tomorrow ahead.

EuroPop

The new data sets for EuroPop have the 'invasion (by camping immigrants)' of the 'rothshield lands'

moving into the shorter term sets as well as its 'aftermath' which is described as 'running battles' across 'fields of rapeseed (oil crops)', and through 'villages'. The data is showing that 'shotgun battles' with 'local farmers' will be 'instigated' by the 'migrant hordes' as they 'fight their way back' from the 'rothshield thugs/enforcers'. The data is showing that 'the 'rothshield property managers' will have 'imported talent/mercenaries' come in to 'evict' the 'squatters' and that is when the 'countryside erupts' into 'violence and 'warfare' that shows as lasting several days. In at least one instance, 'local video capture' of the 'battle scene' will be 'hours long', and 'involve the videographer hiding in a culvert' while filming.

Other scenes of 'violent clashes' will continue to make it to 'social media' in spite of 'government interdiction', 'orders', and 'intervention'. This 'constant video stream' is forecast as 'producing' the 'kids with cams heroes' previously discussed in past ALTA reports. These 'new folk heroes' are described as 'young', 'brave', 'hard', and 'to be envied/emulated by their peers'. The data is showing that their peers, the 'second generation' does not do so well, and 'suffers greatly'.

EuroPop entity has new growth for 'enclave wars' and 'warren/ghetto battles' as the 'core peoples' data sets are forecasting that 'migrant uprisings' in many differing cities in a 'coordinated manner' will end 'badly' for the 'migrant population'. In several of the sets the 'backlash' from the 'local communities' are indicated to 'force' the 'newly arrived migrants away'. It is the 'enclave battles' that the data sets show as the 'initiator' of the 'reverse wave of emigration'.

Other 'initiators' of 'diaspora' include 'floods', and 'volcanoes', and 'new sinkholes', and 'crumbling mountains (into valleys, onto houses/buildings)', and other 'earth expansion impacts'.

As EuroPop runs into the 'earth expansion impacts' the data sets are forecasting that the 'crippling debt (levels)' will 'crush (the) insurance companies' such that 'much of the damage' does 'not get repaired'...in many cases, for 'years'. There are a number of sets indicating that 'major tourist attractions', some of which have 'attracted crowds for centuries', are going to be 'damaged' by the pending earth expansion effects. Several 'attractions' are described as being 'washed away', and 'scrubbed (off the) coastline' by the 'floods', while others are to be 'shaken (into) rubble' as 'earthquakes' and 'volcanoes' cause 'severe trembling'.

Other parts of EuroPop are to be 'exposed' to 'radiation' in some new form. This appears to be NOT a nuclear power plant. The data is sparse, and is 'ocean' connected, and maybe forecasting that a 'nuclear powered vessel' has 'difficulties' and is 'beached' which creates the 'horse-shoe' shaped area of 'radiation exposure' that will be a proximate cause for 'diaspora' from that area.

There are a number of sets that may be indicating a 'down turn' in 'central european river traffic' due to 'drying (up) rivers'. The data seems to be indicating that 'barges' and other 'river vessels' will be 'visible' as they are 'stuck' in the 'middle (of) mud flats' that 'used to be rivers'. The data sets are forecasting that 'rescues' of 'river cruise boats' will be video offered on line following this episode.

The EuroPop entity is also forecasting that the 'street battles' in major metropolitan regions are going to take a distinctly 'african turn' as the 'migrants' will 'stake out', and 'try to control', the 'oil refineries', and other 'importation points'. During one such incident, the forecast is for 'bullets' and other 'explosive devices' being used in 'dangerous places' to cause just what everyone did not want, the 'total annihilation' of the site.

AfricaPop

Lots of new data sets forecasting that AfricaPop is going to be 'contributing' to the 'global economic depression' that shows up in modelspace in 2016. That said, we need to note that AfricaPop is also showing as being 'golden' through all of the 2020's and well into 2030s as the 'new global infrastructure build-out program' really ramps up. The data sets are showing that not only is AfricaPop to be a 'recipient' of the 'infrastructure build-out', but also, due to the 'minerals' and other 'resources', is going to 'fuel' a lot of the effort. There are several new sub sets for 'mining discoveries' though these are being populated by mainly longer term sets pointing into 2018 and beyond as the 'infrastructure programs' start to be 'globally unveiled' along with the 'new global currencies'. Note, plural...several new currencies will be offered over next 6 years.

While the data sets have lots of 'emigration (from EU)' growth, there are also many sets for 'asian emigration' to Africa. These sets also contain new aspect/attribute linguistics for 'national support (campaigns)' that will be apparently put in place as a result of the 'global financial depression'. As modelspace is progressed from late Summer through to early 2017, the 'Asian emigration' meme is showing as being 'brought forward'. This 'government sponsored campaign' is forecast to be 'active' across all of SE Asia and especially effective in Indonesia, and S China.

Other rising sets within the AfricaPop entity include 'Africa (as) floral (plant matter, not just flowers) resource' to ChinaPop. The data sets are showing that 'new interest' in 'specific plant species' will result in AfricaPop (first southern Africa, then western) becoming major players (over next 14/fourteen years) in the 'plant species development business'. The first indications we will see are forecast for late 2016 as the ChinaPop 'presence' in South Africa takes an 'official turn' with some form of 'Chinese central authorities (state level?) visit' to the region. This 'visit' is indicated to be temporally related to 'financial crisis meetings' occurring in much of the 'western banking world'. The descriptors within this set include data going to 'processing' and 'funneling' of 'information' that is also indicated to 'cause consternation' within the the 'western banking world'. Many of the ChinaPop sets are cross linked to the AfricaPop entity and many of the terminating sets within this entity relating to the 'plant species resource efforts' are also cross linked over to the SpaceGoatFarts entity.

Other new sets within AfricaPop are clustering around the many linguistic structures relating to 'climate change'. The data sets are showing that 'flooding' and 'drought' will dominate the language in many of the same locations, merely separated by a few weeks time. These sets are also indicating several episodes of 'banded winds' coming in 2016 and early 2017 in which the 'winds' will 'separate' the continent into '3/three bands (of) divergent weather'. The 'divergent weather' sets include references to 'abnormal precipitation' which will include 'ice' in regions never before exposed to such a thing.

CanadaPop

The data is forecasting a really 'strange' rest of 2016 for CanadaPop. The details are showing that the 'feeling' of 'what the hell just happened here?' will be dominating large segments of CanadaPop over the rest of this year. These 'question unanswered' sets contain supporting data for 'radiation', and 'other 'hazardous chemicals', and 'solar radiation', and 'water shortage', and 'poisoning (metals)', and 'rust (as in crop disease)', and 'washout (from high mountain lake in a long run out slide)', and 'more fires', and 'more fires, this time in buildings', and seemingly on and on...with the idea coming up from the detail

sets of a 'thousand cuts' and still continuing 'feeling' emerging within CanadaPop. These sets also contain data for 'mysterious' stuff being involved in all of the 'officialdom stories' that will be used to 'move (CanadaPop) about' over this year.

CaribbePop

The data has 'storms', and yet 'more storms' in line for the Caribbean region, but they will not be getting the 'pop corn storms' which will affect Florida and points north. However the 'storms' within the CaribbePop will also feature 'revolution', and 'financial revolution', and 'cultural upheavals'. These sets have details showing the 'global financial depression/crash' has a dual aspect set going to both 'good' and 'bad' in that the 'global depression' is not going to significantly disturb those who are already 'depressed', and further, the 'reallocation' of 'time' and 'resources' by the 'formerly rich' will 'boost' the 'tourist' and 'ex-pat' economies of the region.

What attracts the eye to these sets in modelspace is not the above, but rather some sets indicating that 'storms' will 'reveal (old) shipwrecks'. One of the two instances noted in the data has 'fights' developing between 'local salvers' and 'island (and international) officialdom' over the 'recovered gold (and silver) and art'. What is also revealed in the 'fighting (it out) in the press' during the 'struggle over gold', is that there were 'bodies', which included 'mummies', and 'stone boxes' among the 'recovered items'. These 'bodies' will bring the 'attention' of the 'USA space (and science (repression)) authorities' who then get themselves 'embroiled' in 'local politics' while 'trying (to keep a lid on) their taking the bodies'.

ChinaPop

The new data sets for ChinaPop are showing that 'industrial accidents' are going to be a main 'topic' for national discussions as 'several accidental fires' and 'explosive discharges' will be causing 'central authorities problems' with the 'moving/relocating (of) potentially millions (of near-by) residents'. The data sets are also forecasting that one of the first ever 'biological (GMO) escapes' will take place this Summer in NE China as a 'contaminated sample' from a 'GMO development laboratory' is discovered to 'have escaped'. The data shows that the 'authorities' in the region are 'caught off guard' by the 'discovery' of the 'escaped creature' and both much 'time is wasted', and much 'verbiage is caused' by the delay in 'retrieving' the 'escapee'.

New growth in the sets are indicating that 'men in white (closed environment) suits' will be 'seen' in the 'region' for 'months' following the 'discovery' of the 'release' as the 'authorities' become very 'concerned' about some 'unvoiced fears' around the 'contamination'. Within these sets we have repetitious occurrences of the word 'mutation'. Likely NOT good for the soon-to-be 'jittery/anxious locals'.

There are anew sets indicating that ChinaPop is about to undergo a 'shaped (thought) evolution' into 'culturing/cultivating' all things 'floral (plants of all kinds)'. The data sets are suggesting that a 'planned education effort' will be undertaken by the 'central authorities' as one of many 'anti-pollution measures'. This new 'interest' is showing as being 'promoted' to become the 'chinese national pastime' over the next decade. The idea is that an effort will be made to form a link between 'chinese sense of national identity', and the 'cultivation of plant-life'. These efforts are showing as so successful over the next few

years that 'Africa' will be seen as a 'resource' for the 'plant seeking chinese population'. This is indicated to create new 'cultural bonds' between the Chinese and AfricaPop (see the latter for more on this).

One of the major 'infrastructure build-out memes' that is developing in modelspace is of 're-forestation'. This is not only within the ChinaPop entity but is also seen in several other area of GlobalPop and may well be indicating that a major push may be coming from TPTB to create 'cadres' of 'workers on behalf of the global forests'. Within the ChinaPop entity these sets do not have any of the 'justice warrior' connotations, and in fact are more representative of 'authorities speak' in terms of how the forecast language is appearing in modelspace. The idea coming across is that, within ChinaPop, the 're-forest China' meme will be 'top down driven', and, without regard to that, will be hugely successful.

Yet more 'China (in the) Arctic' data accrues to modelspace as we move through Summer and Fall of 2016. The aspect/attribute sets suggest that 'new initiatives' will develop from some 'unknown source' {ed note: lots of cross links over to the SpaceGoatFarts entity} that will be 'propelling' a 'multiple nation visit to Arctic waters'.

Other areas of 'sea adventures' are suggesting that ChinaPop is going to exhibit 'new behavior' as the 'central authorities' begin to 'push leisure' at levels not seen before. The data sets are forecasting that 'cruise ships' with 'chinese focus' will be 'touted' for later in 2016 by a number of 'international corporations'. Other related sets have 'new resorts' being 'constructed', as well as 'new (financial) arrangements' being made wherein 'chinese firms' will be 'buying up (resort properties)' in a 'systematic manner'. Some of the data sets are referencing the new 'chinese map (of earth)' as including the 'fan' of ChinaPop stretching over the 'south pacific' as 'millions (of middle class) chinese' set about 'cruising'. Along with these sets, modelspace is presenting a view of ChinaPop developing a 'local sailing/boat industry'. These areas of growth have dominance now of the longer term value types indicating a multiple decade trend becoming visible.

ChinaPop is gaining very large areas of growth in sets around 'aquaculture', and curiously many of these also contain sub sets linked to the 'Arctic'. Other sets are cross linked over to the SpaceGoatFarts entity where our terminating sets include 'underseas contention/skirmish'. In other cross linked sets relating to 'China underseas activities', there are a number of sets showing a curious connection between China and Ireland relating to 'deep sea construction', and 'new materials', and 'new techniques'. In some of these sets the implication is that Chinese 'funding' is going to 'propel' an 'irish underseas initiative' that will be 'globally successful' as well as 'globally applicable'. In related sets the data shows that the 'leader' of the 'irish effort (the actual underwater part)' is going to become a 'next level global hero' with 'planetary levels of acclaim'.

ChinaPop has new set that include descriptors for 'naval battles' between the Chinese and 'South Seas pirates'. These include the 'undercover spies' and other language going to the idea that China puts a 'big effort' into 'removing pirate threats' across a wide area of the 'southern ocean'. These sets also include lots of 'rescue (by military)' language.

ChinaPop has a number of new sets going to the idea that Bitcoin is going to 'cross the (chinese) chasm' in 2016 as more than '100/one hundred million chinese' will 'attempt to purchase bitcoin' this year. As many be expected, this shift in 'popular sentiment' is forecast to have a very significant impact on the 'fiat currency price of bitcoin'.

The 'new (chinese) bitcoin owners' are described in sets by language that includes 'rabid (to own)', and

'desperate (to) gamble (on bitcoin appreciation)', and other language similar to the 'panic to own' language still growing and pending for 'gold'. The 'bitcoin desperation (to) get' language is not only building a picture of the '(current chinese) owners' of 'bitcoin' being 'ebullient' and 'joyful' and 'demonstrating (public) smugness', but now the data is indicating that a 'central authorities endorsement' on top of the 'spectacular rise (in fiat currencies)' is going to 'push bitcoin (into) chinese mainstream'. As the 'mainstream' of ChinaPop 'grabs hold' of 'bitcoin', the data is forecasting that the 'hardware' and 'phone wallet' business is going to 'escalate' beyond the 'concepts' of the 'people involved'. Further the 'mainstream acceptance' of 'bitcoin' is also indicated to include 'use as currency' especially in the 'settlement of gambling debts'. The data is suggesting that thousands of 'new to bitcoin' stories will be 'dominating' the 'chinese social media' over the Summer and into Fall and into Winter and into Spring and over the next Summer ...

All of the 'chinese domination of bitcoin' language aside, the ChinaPop sets have very large support at several different levels for 'currency change'. Noting that the emotional sums within this set are at the extreme end of 'impact', and 'duration', and that the 'anticipated spread (of impact geographically)', and the 'anticipated spread (temporally into the future of the impact)' values for the descriptor of this set are implying that China, likely through the 'central authorities', is going to make a 'currency change' internally that will 'ripple around the planet'. The data sets in supporting positions point toward 'gold' and 'silver' being involved, as well as 'chinese central bank', and 'chinese central authorities', and 'chinese (foreign) policy plans'. All of these are being supported by 'recent history', and 'projections' for 'currency impact' to be 'sustaining' for the 'chinese central authorities'. There are several sets within the supporting linguistics that are forecasting that 'chinese stock markets' will 'rally/boost' as the 'ripple effect' takes hold from whatever form of change is going to be put in place.

The 'chinese currency change' is described as 'fishing in a pond', and 'pivoting (on/in) time'. The data sets are not revealing more than the 'chinese currency change' is going to be 'felt globally', and will be a 'worry' that will 'propel' yet more 'bad decisions' as the 'currencies' begin to 'run to panic'.

The 'chinese currency change' is showing as 'rippling around the world' as the 'real estate markets' globally get 'hit by (a) chilling freeze' that goes around the planet in 'less than a week'. The data sets are forecasting that 'real estate sales companies in (non chinese) markets' will be 'disemboweled' by their 'former chinese buyers' who will now be turning into 'vicious sellers' who are 'desperate' to 'be relieved (of their) financial suffering'. This 'desperation' pops up in modelspace as a 'compounding factor' to the 'global real estate crash' (of 2016 and onward). The 'desperate chinese (real estate) sellers' are indicated to also cause 'shifting fortunes' in the 'chinese internal economy' as many find that they become victims of what will come to be known as 'trapped money (syndrome or disease)'. These 'trapped money victims' are also described as being 'affecting (chinese central authorities)' and the 'foreign policy' of ChinaPop.

IslamPop

The data sets are forecasting that the 'bloody battles' are just starting over the 'saudi (claims) to sand/oil/mecca'. These sets are forecasting that 'channels' of 'commercial activities' will be 'disrupted' by the 'enemies' of the 'saudi state'. These 'channel problems' are indicated to be 'moving' the 'kingdom back to older times'. The 'assaults' and 'attacks' against the 'house of saud' are piling up supporting sets

for 'escalation' and 'strategic pin-pricks'. The latter set is painting a picture of 'precise strikes' rather than battles. These 'precise strikes' sets forecast that the 'strategy' will be 'unseen' until 'far too late'.

The new data sets about the 'war (within) IslamPop' are showing that the 'house of saud' is about to be 'reduced by half'. The 'reduction' is indicated to be 'economic', and to be a 'severe hit/blow' to the 'viability' of the 'power structure'. The 'pressures' on the 'saudi kingdom' are also showing that a 'someone' is going to be 'shorting' the 'saudi kingdom' to very good effect. The data indicates that this 'someone' is going to be made very 'rich' by their 'astute financial timing'. What is most interesting in the data is that the 'shorting (of) saudi kingdom' is going to also be a very good temporal marker for the 'rupture' of the 'financial trends (within the central bank controlled markets)'. This temporal marker precedes the 'flooding (of the gold/silver/bitcoin) markets' by the 'majority (of savings funds)'.

For many of the IslamPop, the 'battles for Mecca' and its subsequent 'errors of war' with the resulting 'destruction' will be the 'trigger' to 're-examine (the) Islamic world'. Not good times for IslamPop, but apparently necessary. This period is indicated to last greater than 4/four generations (or about 85/eighty five years).

SouthAmericaPop

Many of the new sets for the SouthAmericaPop are focusing on both the 'economic shitstorm', and the 'earth expansion effects'. The 'earth expansion effects' are including more instances of 'sinkholes', and 'rifts', but within these sets we also find that 'glaciers' and 'droughts' are also to be featured in the future news from South America.

The 'earth expansion effects' include longer term data sets for a 'new pass' in the Andes mountains as 'shifts' and 'slides' will 'open up' a 'new high valley pass'. In some of the sets we find that the 'new pass' will be 'discovered' by 'travelers' who will find that the 'road around the mountain is gone' due to the 'mountain (mostly) being gone'. These sets are forecasting that a 'shift' in the 'earth below' the 'mountain base' will cause a 'small movement' at that level that will reach up to create a new 'valley' very 'high in the mountains'.

Other sets are focusing on the 'crushing economic deflation' and the 'resulting social/political revolutions'. The 'over-capacity' of 'global commodities' and the 'attempts (by south American governments)' to 'reduce (their) currencies' is showing as 'inducing revolution' as the 'economies' (of many countries) start to 'crumble'. Note that those countries referenced are all, in some manner, 'pegging' their 'currencies' to the 'US Federal Reserve dollar'.

The 'social/political revolutions' are also bringing in sets for 'diaspora' that, again, will be augmented by the 'earth expansion effects'. In some areas the 'aquifers leaving' will also mean that the 'humans must leave'. Other areas have new supporting sets for 'out-of-place/out-of-season snows', and the 'formation of (new) glaciers'. The aspect/attributes accruing for both 'aquifers' and 'new (glacial) snows' are extensively cross linked to 'shifting populations', and 'diaspora'. Within the 'diaspora' sets are some painting a picture of 'tribal peoples', as well as 'rural' and 'city populace' who will all be 'forced to relocate'. New sets also include 'volcanoes' as a 'prompt' for 'diaspora' as well as having extensive cross links over to the Markets entity where the terminating sets have to do with 'mines'. Not all of the 'earth

expansion effects' are totally negative in that some of our sets are pointing toward 'new mines' being 'discovered' both as 'new veins (of metals)', and, perhaps more meaningfully, the 're-discovery (of ancient) mines'. In both instances these sets have 'new mining (output) coming on-line' in just about 8/eight years as the 'energy tools' start to 'impact industry'. As a side note, the 'emigration (to) south america' sub sets link '3/three (german) engineering students' to the 'practical turn' that the 'energy tools' take in South America.

USAPop

The USAPop entity has some very disturbing sets going to the idea of 'second -guessing (our) decisions'. The emotional sums are indicating that these new sets are going to be at the extreme ends of impacts on the emotional stability of USAPop. The idea coming across is that we, regular humans, start 'second guessing' our 'investment (and other major life) decisions' as a meme is going to appear that will 'grab' USAPop by the 'throat'. The meme is described as being about 'mass mind control' and 'small group mind control by government'. The data sets are suggesting that a 'lawsuit' will 'trigger' some 'disclosure' that will, in its turn, 'induce (yet) more lawsuits'. The core of the 'lawsuit' is showing as making it past the first 'obstacles', and will be that 'government' is 'actively (using) mind control technology' in the 'investment media', and on 'investment managers' and other 'wall street workers'. The idea from the data is that someone sues the 'government' over what they did to his 'investment advisors' and thus he was screwed. The data suggests that this suit will be allowed to proceed, at least to the point of 'generating (the mind-manipulation) meme'. The result of the 'pending suit' and the 'mind-manipulation meme' are showing as being 'disruptive (to) persons (working)' in the 'financial world' as they start 'wondering' if they have been 'targeted'. The data shows that the entire picture of how the 'financial world works' is going to be put into a state of 'upheaval', and 'chaos' both internally, as above, and then externally as is showing in the very large growth in all things 'financial' or 'economic' within the USAPop.

Within the USAPop entity there are newly emerging sets for the 'session of (their) state' movement which is indicated to include a newly revitalized 'republic of hawaii' movement, along with offshoots wishing to return to 'indigenous aristocracy'. Other 'states to secede' movements are forecast to emerge around 'corruption (in the) federal government', as well as its offshoots that will wish to 'abolish the federal reserve'.

The data sets are showing that the 'fracturing' of the 'national political machinery' will continue to express itself in 'brown shirt tactics' as the 'PowersThatBe' and their 'minions' attempt to 'regain control' of the 'process'. The data sets are forecasting that 'escalation' of the 'brown shirt attacks (paid political disruptive)' will be reaching a near term 'pinnacle' in which 'several (operatives)' will be 'killed (in acting out their parts)'. These sets are forecasting that the 'consequences' language will be appearing very rapidly thereafter. Other sets are showing that the 'propaganda press' is going to try to 'paint (the) attacks' as being 'self-inflicted' and a 'publicity stunt'.

The second largest growth set within the USAPop entity is headed by descriptors for 'economic changes' and actually has more geographic references to 'china' than to any place in the USA. These data sets are emphasizing the 'competition' between the two countries, however they are doing so

within a context of 'roles' in the 'global power structure'. These data sets are suggesting that the USAPop is going to be a 'pawn', over the rest of 2016, in the 'shifting arrangements' within the 'global currency trading'. New growth in the 'economic changes' is going to the idea that there is a 'crumbling' of the 'global economic base' while the 'power elite' are busy 'playing with money'. The data sets are accruing for 'gold (and silver) markets' in 'disarray' with 'fears (of) offering' within the 'economic changes' sub set. The 'economic changes' sub set could be easily interpreted such as to be called 'welcome to failed state status', or 'highway (to) 3rd world hell'. Many of these sets are pointing toward a 'June ' or 'Summer (*(near solstice)northern hemisphere)' period in which we 'enter' the 'aggressive decline' of the 'base economy'.

The data accretion patterns are reflecting a 'new shape' of the 'failure (process)'. This 'new shape' set includes data for 'social collapse'. The 'social collapse' sets are clustering around 'frenetic attacks' that are described as being 'planned' and 'coordinated'. While the idea of 'government control' of the 'social protest process' is an assumed reality, these sets are suggesting that 'new players' are about to enter the 'social consciousness exploitation game', however without any of us knowing. The idea is that some 'free-lance (unaffiliated/self-controlled) social engineers' will be 'discovered' to 'have been (are then in the future currently) active' in pursuit of 'unknown goals' but using 'very sophisticated social engineering tools' which are just 'barely seen' by 'authorities'. Further the data sets are showing that mostly the 'tools' are 'totally misunderstood' by those 'few authorities' who actually are able to 'grasp' the idea.

There are a number of longer term sets within the USAPop that can be labeled as the 'great hardening' with the understanding of the context as the 'hardening (of the) USAPop' in the 'crucible' of 'suffering'. However grim some of the data sets portray the near term future of USAPop during, and after the collapse of the financial dollar based infrastructure, there are areas of universal irony. The data sets are quite clearly indicating that near term mortality rates rise very rapidly during the collapse, but due to the failure of the just in time delivery system and the resulting 'rupture' of the 'corn based diet', many within USAPop will end up living longer. Again though, not that this will be necessarily viewed as a blessing as there are many years of hard challenges ahead.

Part of the 'hardening' linguistics include sets for a 'real collapse' of the 'housing market (nationally)'. The data sets are indicating that in spite of all 'efforts (to) re-inflate' the 'housing bubble', it 'deflates' as 'prices' start to 'crater' in the 'high end markets'. The data is indicating that the 'lower cost' areas for 'housing' will 'hold up' better than any of the 'higher priced regions'. This is showing as being true both at the macro and the micro level with the more 'expensive properties' in all markets dropping both 'faster' and 'further' in price than others.

At the macro level, this new 'cratering' is described as promulgating 'side effects' in the form of 'regional real estate depressions'. These sets are forecasting that 'entire regions' of the country will become 'known (for their) poisoned real estate market'. The idea is that 'over building' and 'under employment (locally)', and the 'sudden disappearance (of) foreign buyers' is going to turn some of the previously 'hottest real estate markets' in the country into 'black holes' where 'real estate (especially condo's)' go to 'die'.

As 'housing' and 'real estate' so critical to both personal well being and the 'domestic economy' it is not surprising that the subjects have some of the highest level emotional values within the lexicon. This is

being reinforced in the accretion patterns as the data is flowing like rivers into new sets for 'dislocations', and 'foreclosures', and 'evictions', while, at nearly the same rate, there are alternate sets growing with 'squatting', and 'secret (living) arrangements (where in 'property' being 'professionally managed' while 'vacant' will form a 'black/gray market' for 'short and long term rentals')', and 'collective assumption (take overs of whole building complexes by more or less organized 'squatting gangs')'.

Not only is 'housing' indicated to be 'falling (into) real (price) discovery', but all of the sets referencing 'commercial real estate' are also filling with support for the 'great crash'. In some of these sets we find that the 'squatters' will also be 'moving into (abandoned store fronts)'. In other sets we have data for 'store owners' who will 'take up residence' in their 'retail stores' in spite of 'zoning problems' as their local 'economy deteriorates'.

Along with the 'crashing real estate' the data sets are continuing to build for 'car dealerships' going 'bankrupt' and 'shuttering'. In some sets we have data for these 'car show rooms' and other 'dealership properties' becoming 'squatters housing', as well as being 'converted (into) warehouses'.

New longer term sets within USAPop are growing for the 'return' of the 'Yankee (sea) trader'. The data sets are forecasting something of a 'surge' in 'young people going to sea (for) work/career'. The data set growth suggests that there will be 'social pressures' that will 'change thinking' for many of the 'stuck generations (living with parents)'. These 'stuck generations' {ed note: more or less the millennials} are going to be 'faced (with) expectation crash' in which their 'view of potential future(s)' comes 'crashing down'. However, the data is indicating that the 'crashing (of the jobs/career/work) potential' will actually be a good thing as it will 'motivate' many 'millions' within the 'lost generations' to 'evaluate (theirs and developing) circumstances' and to 'choose paths not before considered'. In many of these cases, the result will be a 'return (to the) oceans' as a 'way for opportunity'.

Other sets with 'opportunity' include many with 'retirees' who will be seeking to 'recover pensions'. In these sets the 'opportunity' sets are focusing on 'going to Washington DC', and 'going to (the) state house'. Much of the language paints a picture of 'jawboning', and 'pandering (to the) mobs', and other data indicating that the 'politicians' are 'lying (to) save (their) skin'.

More of the 'lying politicians' sub sets are forecasting that there will be a major 'national effort' put forward by the 'federal government' to 'establish (a) national environment authority'. These sets have data suggesting that there will be a 'homeland security' style 'power grab (power round up)' within the disparate 'federal and state environmental agencies and departments'. The idea coming across is that a 'naked power grab' is going to 'attempt' to 'shove (all local) environmental government work' into a 'giant federal bureaucracy'. These sets are appearing in modelspace for a 'roll out' in early 2017, however, the data suggests that the 'groundwork' is going to be 'prepared' over the latter half of 2016. There are a large number of sets within these structures supporting the idea of 'theater' and 'drama' being 'prepared' within the 'environmental crisis' area in order to 'sell the idea (of giant federal oversight)'. Many of these sets are also internally cross linked back over to the 'secession movements (at the states level, note Hawaii is especially featured in these sets for 'environment' conflict with 'federal authorities')'.

Within the 'mega environmental agency (to be imposed)', the data for 'propaganda' are gaining as new supporting sub sets that include 'fracking (well water) contamination', and 'fracking (cancer) clusters', and other 'water/environment pollution' sets accrue to the larger structure. In these sets and their cross

links, the 'propaganda' sets are painting a picture of 'government' using its 'own failures' to 'justify (more) bigger government'.

Other new sets within the USAPop 'diaspora' sets include references to the 'resurgence' of 'gas well leaks' as 'new episodes' of 'methane (natural) gas spewing (from storage containers)' will be 'forcing' the 'population' from their housing.

Many sets either have 'housing' as directly held linguistic structures, or are internally within the USAPop entity or externally to other entities around this subject amid its many contexts. The 'housing' sets have dozens of types of prompts for 'housing market crash' that include 'diaspora', and 'environmental contamination', and 'financial (markets) corrections/movements'. These sets also have many links over to the 'bonds' and these include both 'sovereign' and 'corporate' as the contexts around the 'bonds' linguistics. The data is forecasting that a 'bond (backing) component' to 'financial contracts' relating to 'housing' is going to 'leave the market' and 'not come back'. There are sets going to the idea that the 'prices offered (for the bonds)' will be 'imploding' relative to the 'assets (on books)' being 'backed' by the 'bonds'. The 'billions (of dollars)' are indicated to 'disappear' as the 'bonds fail' due to the 'backing (for the bonds)' that will be 'fading (leaving) from the market'. These sets are showing that the 'imploding bonds' are going to 'light the fire (under sellers)' of almost 'everything' as the 'desperation' for 'cash' and 'liquidity' rush to the 'headline level' of the 'propaganda press' and the 'alternative media'.

Also to be found within the 'housing' sub sets, are many with 'earthquakes' and 'flood damage' as primary supporting aspects. These are mostly showing for the coasts, with the west coast having the 'earthquakes' as their proximate 'damage cause' while on the east coast, especially in the south-east and Florida, it will be 'flooding' from the many, 'short intense storms'. The data sets are showing that the storms will be 'brief', but also 'violent' and loaded with 'water' to levels not 'believed possible'. Much of the 'evidence' for 'amazing water levels' in the 'storms' is going to come from the 'videos' of both the 'rain downpours' and the resulting 'floods'. Within the detail layers are sets describing 'marinas' that will 'flood out/be washed off shore (floating piers, docks, boats, buildings, et al)' due to the 'waters (from a storm in a near-by county) seeking the ocean'. Other sets forecast videos in which the viewer will watch in time lapse as nearby lakes grow and grow and grow until the whole area (never before flooded) is under water and still the rains come. Further supporting sets have these 'storms (popcorn storms from previous ALTA reports)' coming at such a pace as to hit 'daily' with 'each day' having its 'flood added to that of the day before'.

Other 'bad aspects' for the 'housing markets' include the 'freezing of the credit system' as well as 'failing (government backed entities)'. These sets are suggesting that all levels of 'federal government funding' are to be 'suspect' in both 'purchasing power (as the central bankers create digi - dollars as a hyper rate)', and even 'availability' as many of the 'funding sources' (including taxes) are 'failing'. These data sets are also pointing toward the 'coagulation' and 'disintegration' of the 'foreign purchasers (of real estate)' in ALL the 'high end markets'. These sets in their turn are forecasting that the 'concentration' of 'real estate companies (agents et al)' are going to 'be reduced (to less than) half' within a 'year' as the 'stream of buyers' is described as 'stopping'.

As modelspace is progressed through the rest of 2016 the USAPop sub sets gain supporting values for 'riots', and 'open (armed) assaults'. These last can be described as 'skirmishes' between various groups including 'law (police) enforcement', and 'heavily armed gangs'. Other groups involved are showing up

within the supporting sets as 'near (like/similar to) law enforcement'. In two separated sets geographically we have a 'near law-enforcement group' that is showing as 'starting/beginning' one of the 'strangest' and 'longest street battles' yet seen in modern USAPop. These sets are describing a 'near law-enforcement group' with 'near uniforms', and 'weapons' that 'gets into trouble' with the 'wrong (group of) criminals'. They then get 'back-up from real law-enforcement' who also then get 'overwhelmed' by the 'forces they face', and then yet more 'back-up' until a very significant portion of a 'large (eastern (yet could be Chicago?) city)' goes into 'lock-down' as the 'battling forces (take over) the streets'. The 'street battle' is showing as being 'won by attrition' in which 'more (of) them get killed' than 'us (presumably the police)' and things eventually calm down, but not until several blocks of 'multiple million dollar houses' are involved in the sense of 'shot up' or 'burned down'. What many in the USAPop will find even more remarkable is that the very next few days, it 'happens' all over 'again', only this time in yet another 'city'.

The 'riots' sub sets continue to build for a 'foods/goods distribution crisis' in which the 'population' gets 'angry', and something 'initiates' a 'confrontation' between 'angry populace' and 'local government' resulting in an 'emotional spark' that sets off 'more days' of 'riots' and 'looting'. Such scenes are within the data at increasing frequency as modelspace is moved through July. From that point forward there is (more or less) a 'continuous boil' going on of 'displaced/disenfranchised' and 'angry population' at 'battle' some place in the country with 'government officialdom' (usually at lower levels).

There continues to be new growth for 'government offices' being the 'site' for 'riots' as the 'welfare system' is describing as 'bending (under the weight)' of the 'failing dollar'. These sets further are indicating that 'welfare' as an 'institutional view (of humanity)' is going to be 'assaulted' by the 'propaganda media' all the while that their 'masters' are 'struggling desperately' to 'keep the system going'. The data sets show that the 'failure' of the 'welfare system' will be 'sporadic' and 'irregular' in terms of the 'when', and the 'where' that it will impact. The data sets are showing that the 'cards' will 'fail' as the 'banks *(managing the system)' will be 'under pressure (from hackers and from assaults)' such that their 'operations' are 'disrupted'.

The USAPop entity has new sets that are labeled as 'destructive' of the 'economy'. Now, not only are the accretion patterns showing the 'death (of the) financial system', but also we have new sets forming that go to 'economic destruction'. The accretion patterns do change as modelspace is progressed through June and July. In these two months the aspect/attribute sets increasingly are filling in the 'economic destruction' sub sets. These include 'lower (rates)', and 'loss (of ANY jobs)', and 'failure (of the income tax system (which is heavily linked over to the the Markets entity))'. As modelspace is moved through these two months, the 'turn' becomes 'visible' across all media, including the 'propaganda press'. It needs to be noted that ThePowersThatBe likely have sanctioned the 'economic collapse' in these months as the 'distorted numbers' are actually reflective of the 'dismal economy'.

The 'economy degradation' sets are dominated by 'cratering' of the 'purchasing power' of the 'Federal reserve note (aka the 'dollar')'. The data sets are clearly stating that the 'failure of the federal reserve' is going to 'destroy' both the 'USA economy', and the 'dollar'. The 'end of the dollar' is showing as being 'active' over this Summer, 2016. This is not to say that 'dollars' will not be used after Summer 2016, but rather that the 'dollar' will be 'cast off' as the, or any, form of 'global currency'. Further, the data sets are forecasting that 'US Treasury bonds' will be 'sold en masse', and 'treated (like) plague carriers' as Fall approaches. This 'sell off' is showing up as a 'giant obstacle' for the already 'stumbling US

economy'. It is indicated to 'crush imports', and 'send ships back home (in mid transit)', as the 'dollar unravels' at the 'international level'. The USA Pop entity, as it is progressed along with modelspace through July and into August, brings in new aspect/attribute sets for the start of 'the riot season'. Further sets are showing that 'traditional venues' across the nation for 'summer activities' are going to be either 'canceled' or 'curtailed'. Some of these sets are forecasting 'near empty beaches' as 'only locals' are there since the 'tourism traffic crashed' along with the 'dollar purchasing power' as a 'result (of the) global treasury sales'.

Other detail sets show 'county fairs' and other 'summer attractions' such as 'harbor festivals' and 'planting socials' will be 'drawing good crowds' as the 'local population' comes out for 'cheap entertainment' and 'social contact'. These two sets are growing rapidly, and gaining large intensity and duration values. The implication of the 'social contact' sub sets includes the idea that 'social networks' are just 'not going to do (the job)' when the 'economy fails' and 'anxiety' rises to 'the back of the tongue'. The data sets are suggesting that a 'feeling of community' will be 'driving (the) crowds' to 'local venues' while 'poverty (of the economic system)' will 'keep tourists away'.

The data is revealing that the 'summer (attractions)' will be a 'real problem' for TheNationalPowersThatBe as 'groups' able to 'freely discuss' and 'reinforce (each others) opinions' are NOT what 'officialdom' desires right now. In fact there are repeated sets showing that 'video' of 'mercenaries' will be distributed as the 'officialdom' sets out to 'incite social (violence and) chaos'.

Markets

The Markets entity is gaining new growth around the 'next phase' of the 'financial (markets) changes'. This 'new phase' is showing as persisting until just about April of 2017. This 'phase' IS being defined as the 'ending (conditions) period' for the 'US (federal reserve) note'. The data growth patterns are suggesting that over the next '11/eleven months' the 'Federal Reserve Note' will 'depreciate' to the 'extent' that 'thousands' are 'required' for even 'small purchases'.

The data sets are stating that now, as in, at the time that this report is being prepared, the 'markets' are at their 'most dangerous' period that exists JUST ahead of the 'roll over'. The 'roll over' set is also filled with 'bonds (to their knees)', and 'no escape (from bond crash)'. The data is indicating that the 'crash' component is active in late July and throughout August and September. Prior to that, the data is showing 'weeks (of) stagflation' that will be 'wearing down' the 'populace'.

Other sets are explicitly stating that 'hyperinflation' and 'deflation' will be 'battling it out' in a series of 'overlapping (time windows)'. The data is arguing for a cycle of 'hyperinflation' to be followed by 'crushing deflation'. This is apparently to be the developing pattern as 'country after country' goes into 'degradation' of their 'financial system' over these next '4/four years'.

The data sets accruing to the 'degradation' and the 'coagulation' descriptors include support for 'barter (systems)' and 'ersatz script' as being 'temporary replacements' for 'disappearing money (in circulation)'. The idea rising from the details is that as the 'base money supply dwindles away', the local populations will, on their own initiative, 'develop alternatives'. In some of these 'alternative sets' we find that 'barter', 'local trade scripts' and 'coupons' and 'base units of value (aka 1 pound of butter)' are forecast to

emerge from the 'chaos of the 'hyperinflation' and 'deflationary experience' of these next few years. However, the vast majority of the data sets within the 'alternative sub sets' relate to 'crypto-currencies'. Specifically the data sets are forecasting that 'crypto currencies' will be the 'emerging currencies of choice' as the 'old system crumbles about our ears'. These sets are forecasting that 'bitcoin' will become the 'king' of the 'alternative (to paper) currencies', followed by 'ether' (the coin). However it is worth noting that dozens of other forms of 'crypto currencies' will be 'coming out (of) these next few years' including all manner of 'sovereign mined crypto money'. So the data sets are showing that ether (the coin) does gain traction over its other alt-coin rivals, but it is going to be a long time before it can come even close to Bitcoin as the 'financial collapse pressures' of 2016 and 2017 push more of the planet into the BTC as money mind-set.

The data sets within the Markets entity that house the 'smuggler' and other sets related to 'underground economic activity' are growing at very fast rates for 'gold smuggling', and 'silver (bars/coins) smuggling' in which the data is suggesting that 'authorities' all across the planet are going to be 'setting up (staging) criminal (smuggler) busts' JUST in an effort to 'create media' that will be an attempt to 'instill fear' in the 'general classes (of citizens)'. The idea coming out of the data is that the 'propaganda press' and the 'governments' are going to 'try to drive (the herd) into restraint' as the 'financial system' unravels to the point that 'border crossings' and 'anti-capital flight police' will be 'underpaid' and 'severely lacking' at the 'transit points' for 'smuggling'.

The data sets are suggesting that 'criminal arrests' in several countries will focus on 'border guards' and 'capital flight cops' {ed note: general class of police tracking financial criminals} who will be found to be 'corrupt'. This is showing as causing something of a 'crisis' in the 'power structures' of several countries as the 'potential scope' of what was occurring became known.

Related sets gaining new supporting sub sets include the 'small country (tries gold as money)' sets from previous ALTA reports. These sets continue to gain supporting sub sets from 'smugglers' and 'traditional arrangements'. In these sets are divergent areas of growth including 'pressures (on global finances)' and 'debt problems (settled with smuggled gold)'.

Other sets related to 'smuggling' are forecasting that 'desperation among governments' will lead, likely over 2017, to 'stealing (then leasing) gold bearing lands' to 'foreign mining interests'. These sets have clear indicators that 'things do not end well'.

Other sets with 'underground' sub sets in support include many 'real estate' sets within the Markets entity which are showing as 'collapsing (commercial) real estate' will be 'bringing (out) goofy ideas'. In some of the sets, the ideas are not necessarily 'goofy' and include such as 'turning empty malls' into 'regional distribution sub-warehouses', and it appears some 'bright young kids' will make 'names (for themselves)' as 'convertors'. The data is showing that the 'giant empty spaces' of the 'abandoned (or nearly empty) malls' will be turned into 'warehousing space'. Note that there are very large links between these sets and other sets within the Markets entity that go to the idea of the 'emerging world of robots'. The idea coming across here is that not only will the 'convertors' use 'robotics' in making the 'warehouse space', but also in 'organizing (and) operating them'. From the many detail sets it would appear that the 'warehouses' are more likely to be merely 'built up' on the 'slab' of the 'old mall'. The idea coming up from the details is that the 'slab' and 'utilities (roads, electricity, et al)' are what are valuable, and the 'building shells' are 'removed'. Curiously we know that the 'slabs' are valuable as the

'warehouses' to be 'built out' over these next few years will 'carry forward' the 'display art (in laid into the floors of the former malls)' into the next decades.

Some interesting sets are forming up around the 'real estate (owned by foreigners)' sub sets as these are showing that 'tussles' are going to arise as 'local laws' enacted by 'desperate politicians (seeking revenue where ever it may be found)' will 'clash' with the 'mega trade deals (TTP/TTIP et al)'. The idea from the Markets entity and the GlobalPop entity is that 'governments' currently facing 'dwindling tax revenue' will do things like 'tax foreign owners, non-resident' of local 'real estate' at 'higher rates' than 'resident property owners'. While the 'justification' is indicated to come from the idea that 'foreigners do not keep property up to standards, and cannot as they are non-resident and therefore cost the city more money than local guys', the forecast is for 'huge (players/mover-shakers)' to become 'involved (at a) daily level' as these moves will 'rot (the) foundations' of the 'mega trade deals' if 'allowed to stand'. The data sets are quite clear that the 'problem' for the 'big boys' is that 'all politics is local', and all 'local politics' are about 'thin money'. So the data sets are indicating that the 'bribery scandals' that will 'erupt' as the 'big boys' simply 'buy off (the) local guys' are going to lead to 'lynchings', 'killings', 'burnings (of dwellings' and other examples of 'bad behavior' by 'local mobs' where 'they have (real) power' (like over 'local politicians who sold them out'). The data sets are suggesting that in at least one instance, the 'representation (of the) big boys' will be 'trapped (in a) motel room' as the 'mob sets fire' to the 'building'. We will all have to stay tuned to reality to see how that episode works out.

The 'big boys' are showing as being 'flummoxed' by the 'impasse' at 'many (disparate) locations'. Further the data sets are showing that the 'mega trade deals' will 'run into' their 'first tests' as they will be used to try to 'silence' the 'global cooperation' between the various 'local interests' whom are all encountering the same face of the 'big boys'.

Other cross links from the attributes of 'death', 'fatalities', 'murders', 'suicide' are terminating internally within the Markets entity in sets for 'bank workers', 'insurance workers', 'crime investigators', and 'financial executive'. These sets are in a linguistic structure that was used many years ago to forecast the 'wave' of bankster suicides, and it appears that new growth in those sets is forecasting that yet again the world will be treated to stories of 'bizarre suicides' by 'banking elitists'. Again, these will appear to be 'unwilling, assisted suicides'. This wave is indicated to begin in late Summer (northern hemisphere) and to continue through to at least the following Spring.

Other problem sets appear for the 'mining industries' as the various cross links from the Terra entity terminating in sub sets including 'earthquakes', and 'volcanoes'. In the case of the 'volcanoes', these sets are indicated to be 'intruding into the mining operations'. This is showing as affecting both 'deep tunnel' and 'pit mines'. The 'pit mines' are also indicated to be impacted in several locations due to the 'lakes in the sky' from previous ALTA reports wherein very large, and nearly 'cohesive lakes of water' being held up in very high altitudes are 'suddenly let go'. Other problems for the 'mines' include 'new aquifers', or 'new pathways (for) aquifers', as well as 'underground rivers' which will be 'rerouted' by 'internal earth changes'. The data sets, especially the immediacy data types, are focusing on a near term 'shock' that will be coming to the 'mining business' as a 'large, underground river' will be 'shifted upward' with enough 'force' to cause the 'lower levels' of the 'mine' to start to 'weep water faster than pumps can remove'. So the data sets are forecasting that 'yet more pumps' will be brought in, and then more pumps, yet the 'water (will) keep rising' until 'level after level' are 'underwater' and yet 'more rises'. The data sets are suggesting that this process will take 'days' if not 'weeks' before the 'entire mine' is

unreachable, and yet still the 'water rises'. The data sets are indicating that the 'press (mainstream propaganda media and alternative)' will become involved in the story fairly early on. It would seem that this is going to result from 'several earthquakes'.

Other (sort of) 'problems' for the 'mining industry' is that in late 2016 the 'ratio' of 'available' to 'pre-purchased mine-out puts' will hit just as the forecast is for 'demand to soar'. The data is suggesting that the 'pre-purchase' of the 'mining output' by a number of differing firms and industries is showing as leading to a 'crunch' in the 'availability' of 'physical metal' as the 'former suppliers (to the public)' go 'dark' and the 'supply shrinks rapidly'.

Amidst the developing 'chaos' for the 'commodities industries', the data sets are gaining support for a 'take off' of Bitcoin that will rapidly push through the 500s and then seek for over \$650 per BTC. The growth patterns of the new aspect/attribute sets are showing that it is 'no longer possible' to 'ignore' the 'bitcoin phenomena'. These new 'price seeking' sets are also extensively cross linked over to the 'hyperinflation' sets that litter the Markets and GlobalPop entities. As modelspace is moved forward into late Summer (northern hemisphere) the data shows that the 'currency wars/contention' is to gain 'large amounts' of 'propaganda press' as this next phase of 'economic policies clash' is kicked into a 'higher level' of 'dollar trading activity'.

Nearly a third of all new 'bitcoin' sets contain 'hyperinflation' sub set links, or the descriptors held directly. These sets are all 'federal reserve note (aka US dollar)' cross linked, even if their primary reference is to some other form of 'currency'. The implication from the accretion patterns of these sets is that the 'dollar' is going to be under 'selling pressure', not only from ChinaPop, but also from other parts of GlobalPop as their 'local currencies' are 'tied to (the failing) dollar'. The 'rate of rise' of Bitcoin relative to the 'failing dollar' is showing as taking a very large 'leg up' after BTC passes \$650 or so in dollars. At that point we can safely assume that the 'confidence value' held by the 'public' globally regarding the 'Federal reserve' goes to 'near zero'.

Without regard to the 'hyperinflation' language, there are several hints in modelspace as to how the flow of events may occur. Some of these hints indicate that a period of 'calm' will emerge in the 'precious metals' markets over late June, that will hold through the solstice. The data sets are showing that this is the period of time of the 'response' from the 'central bank authorities'. Then, sometime in early to mid July, the Markets entity is forecasting that there will be a 'reaction' from the 'response'. The 'reaction' is described as being the 'kick off' that starts 'hyperinflation' in earnest.

If modelspace is progressed through 2016 and all of 2017, and noting that in 2017 modelspace is primarily populated with longer term values, the data is showing that 'extreme numbers' for 'gold' and for 'silver'. Additionally, the linguistic descriptors for the 'dollar value' of 'bitcoin', are forecasting over \$14,000 US Federal Reserve notes for each Bitcoin. This is to say, that at some point in 2017 we will get the language about \$14,000 per bitcoin. At that point, the data is forecasting that 'gold' will be just be 'settling down' from having recently 'doubled'. While there are no numerals in these sets, the descriptors are suggesting that a 'dollar price' for 'gold' at that point had been over '20,000' for some period of days if not weeks. Note that longer term data alone is not reliable, and frequently aspect sets are modified by diminishing aspects as they move into shorter term data types and the broader, more dilute context that this provides.

The data growth patterns still maintain that 'Chinese/Indian demand' for 'gold and silver' will be

coincident with the rise of Bitcoin past the 642 to 650 dollars per Bitcoin. Initially it will all be about China, but the Markets entity is forecasting that the 'escalation of the (dollar) price (of) gold and then silver' will send the 'technological savvy masses' into 'bitcoin hunts'. New data sets are also showing that an 'Indian invention (likely an 'add-on' to a cell phone)' is going to provide 'collective blockchain mining' such that 'India blossoms' as a 'bitcoin center'. While 'India-Techno-Pop' arrives a bit later, the data is showing that the 'volatility' of the 'chinese stock market' over Summer, along with the 'currency devaluation(s)' will be the 'big push' for the 'spread of bitcoin' beyond the 'techno-hip' segment of ChinaPop. The 'spread of bitcoin' is also indicated to get a big 'boost' from 'gambling (on appreciation) fever', and from 'capital controls', and from 'new hardware wallets' that apparently can 'trade bitcoin' for you 'while you sleep'.

As modelspace is progressed through June to past the solstice, the Markets entity gains new supporting sets for 'upheavals' in 'markets (and more significantly 'market conditions')' such that 'Chinese demand' for 'gold', and 'silver', and 'bitcoin' escalates, according to the data, by nearly '10/ten per cent'. The really key feature of the linguistics are that the 'rise (in) understanding' by the ChinaPop will take us over a 'critical level' within that population such that 'Bitcoin Fever' is described as 'spreading (like a) disease (fever)'. As these sets grow, a very significant portion of the new emotional tone derives from the 'gambling on appreciation' aspect that is indicated to 'really hook' the 'ChinaPop mind'.

Other, cross linked sets are indicating that the 'russian resistance' to bitcoin will 'fade' as it becomes a 'china dominated phenomena'. The data continues to grow over sets showing that Russian involvement with both bitcoin (the currency) and 'blockchain technology' is going to 'alter the global trade balance'. There are sets showing a brief though likely multiple year 'connection/link between bitcoin and oil/energy'.

Returning to the 'precious metals' sub sets, there are several 'russian' sets that are rising in the dominance of the supporting sets. Right now at tertiary level and continuing to grow, these sets are suggesting that the 'Russians (likely the government)' will be 'releasing information' and that the 'information' is indicated to 'affect (the) price (of) precious metals'. These set are also showing that the 'Russian information' has far reaching 'impact values' that give it legs out into 2024, and then it starts trailing off in its emotional impact.

However, without regard to the 'russian information input' to the 'pricing structure', the data sets are showing that 'silver demand', for 'coins', 'small bars', and 'other forms' are going to rise very rapidly over the latter half of June 2016 and this is the described 'low demand point' for the 'year'. As modelspace is progressed into July, we see that new sets are accruing showing that 'silver demand' scales up, and then rapidly surpasses all 'previous high levels'. These sets have huge levels of very extreme emotional sums attached. It would seem hard to over emphasize these sets for 'silver demand'. These sets are descriptors for a 'globe impacting change' in the 'popular mindset' as to the 'validity' and 'value' of the 'paper currencies'. These sets are filling around the 'debt levels' and 'debt (as fake assets)' for the 'pension plans', and 'pension funds', and other forms of 'institutional investors'. These sets are indicating that a 'debt (based) fiasco' will have occurred by mid July to mid August. The data sets are beginning their accretion in mid June, but do not reach a steady state until the middle of July. Then the growth patterns continue at a very steady rate through for slightly over a month.

As modelspace is moved through 2016 and 2017, the 'degradation' that begins in the 'financial markets'

realm over June 2016 increases the impacts on the 'western population'. As the 'western (financial system) population' encounters the 'dollar wall (aka 'disappearing federal reserve notes base currency')' in 2016, the data sets are showing that over the latter half of the year, and then through all of 2017, the 'rushing panic to own silver (no gold available for dollars)' is going to create 'scenes of chaos' at 'coin dealers', and 'pawn shops' and then 'jewelry shops' as the 'lust for precious metals' takes hold at a 'core culture level'.

As modelspace gains the 'markets upheavals' aspect/attribute sets, the 'chinese markets' sub sets are showing a divergent path with the 'precious metals' and 'bitcoin' setting off 'upward' while the 'stock markets' are 'necessarily supported (by central authorities buying)'. As modelspace moves through July and into August, even the 'lucky month' and all the 'propaganda' will not 'keep (the markets) afloat' with the data sets forecasting that 'china markets' along with the 'western (and dollar linked) markets' move into 'yet another steep drop'. The first of the 'steep drop' data sets appears as modelspace is moved past July 6, with a slight lag in new aspect/attribute sets until somewhere near July 11, then a steady rate of growth persists through the rest of the month and into August.

Some of the new Market entity sets include the shift of the 'emerging energy technologies' down into the shorter term value sets. These sets include the 'dissolve it where it sits' form of 'energy mining', and other 'energy tools' that have been referenced in previous ALTA reports of the last few years. These sets are all experiencing the shift into more near term linguistics, and many of these are suggesting that their 'underlying technologies' will be 'emerging' in late 2016 or early 2017.

Other 'technology' based sets include new growth going to the idea that the time of the 'slaughter of the unicorns' is upon us. The 'unicorns' referenced are the 'tech firms' with 'prospects sand profits'. The data sets are forecasting that 'yet another tech bubble' has 'burst' and within July and August the 'financial world' will 'react badly' to yet another 'loss' of a 'place to stick currencies'. Curiously the data sets have higher emotional sets around the loss of the 'capacity to (burn) money' with the 'churn'. The data does have 'on-rushing business collapses' and 'firings', and other such 'misery', but the larger emotional tone values are indicating that a lot of highly charged language is going to emerge around the idea of 'no more (money) sponge!'.

Other sets are showing that some 'financial technology companies' are going to be 'viable', and will be emerging very strongly as the 'banks (continue) to fail'. Many of the supporting sets within these structures are also including 'bitcoin' at some level.

As modelspace is moved through June and July, the 'winds' components of the current phase of 'climate change' are forecast to be 'market influence elements' as the 'damage losses' from the 'straight-line winds', and their 'spinning' forms are described as 'stacking upon (the) insurance business'. Further, there are sets going to the idea that 'markets' themselves will be 'disrupted' as the 'winds (will) trash/destroy/rubbish' the 'required communications' for 'markets tradings'. The 'damage' levels are described as 'severe' and 'extreme'. Many of these sets are now cross linked back to the 'pop-corn storms' forecasts from previous ALTA reports. Many of the supporting 'damage (to) communications' sets are filled with longer term values suggesting that the 'outage' may last for a number of months.

Other new sets within the accretion patterns developing in modelspace over the months between June and September 2016 contain rising supporting sets for 'fire damage', and 'flood damage', and 'food crop failure (due to either heat, drought, flood or freeze (out of season, and out of place))'. These new

aspect/attribute sets include many references to 'failing (contracts)' that will be 'repudiated' and (somehow) 'held hostage' by the 'insurance company (involved)'. These new sets include references to 'chinese (bank)' involvement in having to 'rescue' a '20th century insurance company'.

New growth appears in the 'energy' contexts as the aspect/attribute sets are suggesting that by 2020, there will be a 'global oil shortage'. This is indicated to arise from the events of 2016 and 2017 as several different factors from 'inancial collapse' to 'earth expansion' combine to 'cut production levels' to 'severely constrained amounts'. Further the data sets are suggesting that by the early 2020's there will be 'global oil rationing'. These sets are continuation of the growth patterns previously reported in ALTA reports as the 'oil too precious to burn' sets. These sets are indicating that this period will be in place by mid 2019, and that 'energy production' will be 'paramount' in ALL 'markets' that exist at that time.

The 'energy deprivation' that is forecast is very long lasting in that the longer term values continue to accrue to the linguistic structure. The data further goes to 'exacerbation by way (of) weather (ice age) change'. These sets are forecasting that 'increasing need', and 'decreasing availability' will be crossing in the near future as the 'climate (alters to) ice age conditions'. Additional problems for the 'energy production' not only comes from the 'colder conditions', and 'out-of-place cold conditions', but also from 'sudden oil depletion syndrome' in which the 'cap' to the 'oil pool' will be 'undone' by the 'stretching planet'.

The very last reference in the Markets entity discussion for this report will be this section about the 'global cubano movement'. The reason for the placement of this discussion here is that it is so closely and extensively linked to the SpaceGoatFarts entity that it is difficult to decide in which it belongs. The data accretion patterns down to the aspect/attribute level are forecasting that a 'global *(populist) movement' will be developing over the next 5/five years that will 'take its lead' from the 'cuban experiences' of the 'hard years (of no outside money)'. These sets have subsumed the 'make-a-way' sets within USAPop by cross links, and these sets are suggesting that the 'self-identity' of those participating in the movement will favor 'cuba' over other location labels. The Markets entity involvement centers around 'disruptive technologies' that include 'software algorithms', and 'organization concepts'. These sets are dominating the 'banking' and 'financial/social collapse/break-down' sets within the Markets entity and are pointing at 'new forms' of 'self-organizing collectives (SOCs)' which will be 'implementing radical change' in 'global food (and other necessities) production'. The data sets are showing that there will be attempts to 'control', and 'derail', and 'disturb' the 'rising wave (of) cubanos' globally as they 'set about re-engineering (their local) food/necessities environment', but the data is also clearly showing that 'failure' is the result of the 'attempts'. Further the 'failure' sets are also central to new sets forming around 'trials', and 'tests', and 'assaults' on/against the 'mega trade deal global corpratocracy'. Again, sadly in many of these sets of 'tests/trials' there are sub sets going to 'murders' and 'killings' usually associated with 'representation (of the) trade deal' as the 'victim'. It would seem that the 'locals', when pressed, will 'present (a locally effective) response'. As the data sets indicate the 'rise of the global cubano movement', modelspace is also filling with sets that are going to 'resistance' to the 'intrusions' of the 'mega trade deals'.

These 'resistance' sets are what are most emotionally disturbing to the Markets entity emotional sums. In these sets there are several layers of cross links that go over to the more general idea of 'resistance' which is within the context of the 'markets' in a broader sense as 'resistance (to) central banks (screw-ups)'. The language showing up here is very similar to that describing the bond vigilantes of the 1970's.

In these new sets, it is the 'federal reserve dollar' that is the 'target' of the 'vigilantes'. In these sets there is growth in areas that are new additions to the 'dollar shock' and the 'dollar wall' that hits the USAPop so 'squarely in the face' in our 'summer of completion' in 2016.

SpaceGoatFarts

New sets accruing to the SpaceGoatFarts entity sub set of 'extreme (dis-believed) archeology' are including some shorter term sets for 'chimera', and 'fossils (of) extraordinary (near) humans'. These sets are showing for either late Summer or early Fall (northern hemisphere) as the '(near) human (fossilized) skeletons' are to be 'revealed' by a 'land wash (water induced land slide)'. The 'land (revealing) wash' is indicated to 'excite (tens of thousands)' of 'near by' people to 'loot' the 'site' as there will be 'gold revealed', but the data is showing that the 'looting' will 'empty (the) first two (chambers)' that will then 'reveal' the 'hidden infrastructure' in which the '(near) human' remains will be found. This does not, at this time, have any associations to the 'deep Gaelic (language)' set previously reported, excepting that it appears to follow that 'discovery' as a temporal marker for yet more 'changes (to) human history' coming in these next two years.

A large area of newly forming sets include some going to the idea that 'software eats the world'. As a 'reaction' to the 'wonky financial environment', the 'move to automate' is showing as being one of the very few sections of the economic world where 'real growth' will continue to happen for the 'next (few) decades'. The data sets are showing, via longer term values, that 'automation' is going to 'spread out' across the 'working world' in ways not anticipated even as close as 2/two years ago. The data shows that the 'buzz' and 'emotional energy' that is currently forecast to 'drain (from) financial technology (over these next two years)' will be moving into 'automation (for the) planet' and will do so in a 'bottom to top' manner.

These new sets are forecasting that 'smart everything' is nearly to your door. And in fact will be soon within your 'door' as 'smart doors' that can 'recognize you' and which are in 'contact with (your house management automaton)' will very soon be 'sold to you' over your 'phone' by an 'avatar' that looks exactly like 'you'!

However, that aspect/attribute set has great levels of cross links over to the USAPop sub set where the forecast is for 'judicial authorities' (in a few years) to 'ban' the use of 'self-based avatars' in any 'commercial offering, presentation, or solicitation'. These sets further have other links that go to the idea of 'autonomous law-bots' which will be 'part of the suits' involved in the decision. The basic idea is that it will be 'ruled' as 'egregious' and 'deceptive' to use your 'own image' in a sales presentation to you. Then the cross links continue over to 'general purpose (presenting) avatars' and how some small few people will become the 'global source material' for the 'general purpose avatar business', which is also indicated to 'grow significantly' following the 'judicial intervention', and a very large number of 'avatar induced suicides'.

The data sets continue to clump around in SpaceGoatFarts entity near the sets for 'time' and 'time alterations'. These 'timeline (being) changed' memes are forecast to 'gain traction' at huge levels over the next 3/three years, especially as there are still growth within the sets for 'accident (in a) time laboratory' appearing in this last processing. These new sets are suggesting that we may be close to

'experiencing' a 'time leak' over this Summer. The new aspect/attribute sets have support that includes 'cafe (society) disrupted', and 'social media' within our 'visibility' values sum suggesting that photos if not videos of the event or its immediate aftermath will be 'circulating' at a 'near viral' rate.

According to the SpaceGoatFarts entity data sets Hollywood got it wrong. It will not be zombies we need to address, but rather, 'mutants'. The data sets are suggesting that 'mutations' are going to be the 'next big thing' relative to 'science', and 'social media'. The data would have the 'mutant' meme developing at a slow bubble over the Summer (northern hemisphere) 2016, and then start to 'jump up' in large steps of 'general awareness' over late Fall and into Winter. The 'mutant' data sets are indicating that 'mutations' will be appearing across a 'wide spectrum of species' including animals and plants and humans. Further the data is suggesting that some 'new species' may force us to 'redefine the kingdoms (of taxonomy)' as these 'new beings' may 'blur' the distinctions between animal and plant-life'.

There are many 'social issues' that are going to be coming along with the 'mutants' such that 'new definitions' at many legal levels are going to be required over these next 4/four decades. The data includes longer term values that point to 'governmental reactions' to 'mutants' in a less than 'positive way' over the next 8/eight years as the data forecasts 'global population' will 'wrestle with (the) implications' of the 'appearance (globally) of the mutants'.

Other sets are forecasting that more than just 'mutations' will be a problem for 'global humanity' as there are a number of new sets for 'contact' between 'humans' and 'something other (than human)'. These sets are forecasting that this 'contact' is not 'far out' in the sense of distance, but may be 'far out' in the idea that the data may be showing us humans as not able to 'achieve recognition'. The details are suggestive of our 'achievements' at an 'energy level' as being 'too small to be noticed'. The accretion patterns would have the 'space aliens' just 'go whizzing by' and 'not able recognize earth' as being 'inhabited'. Now the interesting part is that the data is forecasting that some number over 1/one billion humans will have 'visual evidence' of the 'transit (of the) space aliens'. Presumably this will be because they happen to live on that side of the planet that gets the fly-by, or something of that nature. These new sets are in the same linguistic structure as the discussed 'cruise ship visit to earth' data sets in previous ALTA reports.

The 'cruise (space) ship visiting earth' sub sets are describing a situation in which we humans are able to 'view the space aliens' as they 'cruise (earth's) atmosphere', but are (perhaps) not able to be 'visible' to the 'aliens'. Sub sets of these sets may be implying that a whole bunch of humans 'try' to 'get the attention' of the 'passing space aliens'. The idea coming across is that the 'passage' takes nearly 'half a day' and during that time, the 'word' of the 'experience' spreads ahead of the 'viewing possibility' such that 'crowds (in the millions)' are 'outside' and 'looking up' ahead of the 'appearance of the cruise ship'.

Within the many many UFO (and USO) sets there are several repeating patterns about a 're-visit' in which 'UFO' encounters will 'seem like (old) times' in terms of the 'details of contact'. What will be very interesting is that this time around it will involve 'credible celebrities' and 'video/audio' evidence'. The detail sets are suggesting that an 'organization' that is about 'mind (human) study' will find itself at the 'center of contact'. Some of these sets have 'revisit' and others have 'new encounter' (with) a 'newly contacted species'. The conflict within the data is not reconcilable at this point, and may be meaningful as we see this play out. Other sets within this group are forecasting that a 'minor (agricultural?) government employee' will find his/herself in the 'middle' of the 'contact experience' and later, time

period unknown, will 'leverage' the 'experience' into a 'position' as an 'ambassador'. Detail level data elements include aspect/attribute sets for 'pissed (off) officialdom' especially the 'US State department', and the 'British Foreign Office' as they are indicated to be 'cut out' of the 'officialdom side (of the contact) experience'. Supporting sets are also forecasting that those involved in the 'revisit contact experience' will have 'future entanglements' with 'deep state "researchers"' when some of the 'details' emerge. The idea is that the 'stories' make the rounds and then some of the 'originating storytellers' receive 'personal visits' from what we probably should call 'men in black'. This then sets off even further 'stories' and 'entanglements' as the 'contactees' find that 'officialdom' is not saying what they really are after...

Conclusion: Lotus blooming

Propaganda is defined, at its core, as 'biased communications'; while noting that ALL communications are biased, and any claiming the contrary are to be treated with suspicion, it is factual that a human society, flooded and drowning in state-purposed propaganda, will self-destruct. All examples of such social orders in history bear out this conclusion. We need only briefly examine any of the failed civilizations of the past, and if they were not destroyed by the environment, they were destroyed by propaganda.

The reason that propaganda floods cause social implosion is quite easy to grasp, it has to do with facts and truth. You see, all of life is education for those who are alive. So crossing the threshold of life is, in the parlance of the times, your acquiescence to the 'terms and conditions' of the experience. At its core, the 'life experience' is one of seeking for your version of truth among the many facts of experiential existence.

Make sense? Life is about discovery, for you, at a personal level that is continuously unfolding JUST to provide you with the potentials, and clues that you, personally, require. So, if all of your life, to date and to its 'pull date' is all about discovery seeking for truth, then no damn wonder humans don't do well when drowning in deep state bullshit.

Propaganda does work, will always work, at least initially, and temporarily. At some point in the process however, the victims of the process have had their minds walls breached by their personal reality of their life flow intruding beyond the mental constructions put there by the propaganda masters.

Such victims of propaganda rebel. What they are rebelling against, or for, or to, is frequently a mystery to them; but deep in their being, they know, shit ain't right! And that 'feeling' just will NOT go away. So they rebel; slowly at first, in ignorance, and hesitatingly, until the first small success of it all starts crumbling down the edifice of saggy deep state shit-wall, and then it all comes down in a rush.

We are there, now, just slightly ahead of the 'rush' of it all coming down, out, and then spewing out so fast it is hard to track all of it so your mind just gives it up, and ceases instead of seizing.

When it is done, this 'propaganda break-through', you will discover a feeling deep within you that is at once both the scariest ever, and the most thrilling of promises ever, as you look at your own being, standing naked before universe, swimming in an ocean of misdirecting misinformation misunderstood, yet aware, and somehow, 'right with it, here, now'.

No wonder those who have been through the enlightenment process call it 'rebirth'.

On the day when the lotus bloomed, alas, my mind was straying, and I knew it not. My basket was empty and the flower remained unheeded.

Only now and again a sadness fell upon me, and I started up from my dream and felt a sweet trace of a strange smell in the south wind.

That vague fragrance made my heart ache with longing, and it seemed to me that it was the eager breath of the summer seeking for its completion.

I knew not then that it was so near, that it was mine, and this perfect sweetness had blossomed in the depth of my own heart.
