Future forecasting can seem overwhelming...

Even to me, and even after all these years examining data and creating reports. So if it gets to you, or you have questions about the reports, my best contact email for such will be clif@halfpasthuman.com. For background on how these reports are created, there is a primer in the last 8/eight pages of this report. If your questions about preparation are not answered after reading these, then send an email and I will get back to you when I am able to get through the daily work (there is a lot of it).

If you have a need for yet more words on the subjects discussed herein, albeit 'live', please visit the webbotforum.com. Please note I have to isolate the forum due to the language causing a circuitous reference issue for our work. For the sake of not affecting my interpretation I do not visit the forum.

Note to new readers, our work tends to concentrate on a negative view (see primer at the end of this report).

Refunds available on request, no questions asked, so do not feel you need continue into information you would prefer not, simply over purchase price.

Meta data

The majority of this report is devoted to the USAPop and the Markets entity. The reasons will be obvious. Where time permits, sub sets of GlobalPop have been annotated. The data suggests that a USAPop focus will be continuing through to at least April of 2017 as USAPop leads the rest of the western world into the death of the Federal Reserve USA) dollar paradigm. We do not have enough longer term data to determine if this is the death of the 'central banking-warfare' model for humanity, but it is clear the potentials are in place for such an outcome to develop over these next few decades.

I have worked diligently to bring out the positive focus of all the data sets as presented here. Not to slant, but only to try to balance out what could be seen as a negative focus. Remember, humans, especially on the internet, and especially in english, tend to express more negative emotions than positive. This is a known aspect of our work these past decades. So, instead of becoming depressed over the forecast in this (and probably next few) ALTA reports, you do have the option of viewing these upcoming years as some of the most monumental for change in recent decades.

Please note that with all of the manifesting temporal markers in the 'secrets revealed' meta data layers of some years back, many of those sets are now 'new again'. So if some of these descriptions below seem familiar, they may be as we have lots of temporal markers emerging along with the other data 'behind them' so to speak.

Your world changes...

In a similar way to the 'floods' dominating the Terra entity, then being replaced at the top level by 'winds' recently, the data sets are forecasting that 'earthquakes' will be the word of the year over late 2017 through to the beginning of 2019.

The data sets are suggesting that our forecast for 'earthquakes' in North America over 2017 may be the mild expression of what is really going to turn out to be a series of earthquakes with one or several that will be 'notable'. The 'notable' language does not relate to 'magnitudes' nor 'defined scales' but rather to 'damage levels'. The data sets are describing a 'bowl' that will be created across a large area of the north American plains by a combination of the earthquakes being described as 'numerous', and the previous 'damage (such as 'fracking')'. The data sets are describing the damages as 'sunken streets', and 'caved in buildings', and 'cell towers (crashed) down', and 'malls destroyed', and at least one instance of an 'airport' with a 'runway broken in half'.

These earthquakes and their 'cluster' or 'series' are described as being 'interrupted' by 'significant' or 'sizable' earthquakes that are really to be 'earth shudders'. In general the 'earth shudders', as part of the 'earth expansion events' currently underway, are showing as continuing through 2045 in increasingly 'disruptive magnitudes'. There are a number of sets growing that are also suggesting that part of the future earth shudders will be due to the 'rearrangement' of the 'ice masses' around our planet as the 'new ice age' begins with the 'abnormal summers of 2017 through 2040. Of course by 2040, the word 'abnormal' will no longer be used as it will be those generations 'normal', and they will be living in a world very unlike today's. The planet then will be 'ice bound' in differing places, and the resulting 'floods' (pun intended) of the 'ice masses' across the 'continents' are described as 'taking up' so much water from the oceans as to 'expose huge valleys' in which 'ancient civilizations' can be 'observed'. Note, not found, but 'observed'. The data sets in some parts of GlobalPop are forecasting 'people watching' for recreation, the tides slowly moving out, and 'staying more' each day, until the 'vague shadows' of 'former (glorious) civilizations' will be 'firm buildings' and 'mud covered relics' revealed yet 'more with each tide outgoing'. Of course these 'outgoing tides' which do not come back in quite as far each day are a huge disruption for our 'ocean based society' as it dawns on all of us, that 'new coast lines are NOT a good thing when all the 'ports' have to be moved, and then moved again, and again, and for how long? Further, much of the 'lands revealed' are not going to be 'suitable' for 'human habitation' for many reasons, most of which have to do with 'mud', and some of which have to do with 'toxic mud'. Other data sets are showing that we will get language discussing the 'futility of chasing retreating oceans' until 'stability returns'. However this will not slow down the push to come up with solutions, but due to the 'economic fraying (of the ties that bind civilization)' {See Markets below} in some areas, the 'dry land ports' are not going to be much noticed, given the other problems.

Other earthquake events are to be occurring in 'antarctica' (of all places) as the data describes 'ice shelves' that will 'peel off' like 'crumbs from layer cake'. These earthquake events are also described as 'glacier quakes', and their descriptor sets include language around very large 'ice movements' that can be 'continent shaping'.

These are apparently the predicted 'earthquakes' that will 'rearrange the land' such that a 'critical river' will be 'draining' into a 'new inland sea'. This is forecast to cause all manner of chaos for USAPop as several 'nuclear plants' become 'suddenly dry (no cooling water)'. These sets are still growing and still

forecasting for this to be in the South East of north America. No further clarification of exact position.

The 'climate' sets are now indicated to be 'blending into' the earth changes such that 'jet streams' will no longer be as 'predictable' as in the past, and thus nearly all the 'ocean currents' are going to be 'altered'. These 'new current patterns' are indicated to have all manner of impacts on both the 'shape' of the coasts of the continents, and 'human use/interaction with the oceans'. Piling on top of that, the currents are indicated to alter the coasts such that new heat patterns are created, that in their turn, then form a new feed back loop which alters the wind patterns.

The very long term data sets are gathering anew around Antarctica and its future 'shape'. This set for 'shape' also includes its 'ice pack'. In these sets, even though seemingly contradictory to other sets forecasting an 'ice age', the 'Antarctica ice pack' is described as 'withering' over the next '2/two human generations'. The data indicates that this will be 'visible' to the 'human eye' in only 6 or 7 years', but will take some number of years to progress the greater distance being forecast. The data sets are describing a situation where 'ancient human habitation' including 'technology' will be 'exposed' by the 'withering ice packs' and create something of an 'archaeology (for profit)' boom at the 'newly exposed (edges) of the continent'. The 'antarctica' data sets are describing a 'melting' of the ice pack, as well as 'drifting off', yet the over all global impact is also being described as moving 'currents', and 'altering wind patterns', but in general not 'swelling the oceans'. This last is showing up as being due to 'so much rain' being now dumped back onto land, some places in the form of snow that will grow into its own 'ice pack' as has been forecast over these few years.

Modelspace continues to show that new 'air currents' as forecast will be taking the lead in the language for this coming Winter 2016/2017 over large areas of the 'northern hemisphere'. These 'air current changes' are to include very bizarre behavior from the 'jet streams' that will be 'inexplicable' according to the new accretion patterns. It maybe that have a swing, gradual or sudden, of some of the jet stream currents to a more 'pole to pole' orientation. Needless to say, these shifts will turn all 'weather forecasting' into a 'devolving mystery' until the 'shift' is 'noticed and explained (as the cause of the new weather pattern)'. The 'shifting into polar wind patterns' shows up as also causing new 'ice formations' and 'extreme snows' in some unexpected areas of the northern hemisphere over Winter, but more in 2017. The data sets are describing a 'pattern shift' for the 'seasons' that will put some parts of the 'northern hemisphere' into a 'late occurring Winter' with 'extreme (end of season) snows' such that 2017 will also be the 'year the snow stayed through summer' with images showing up later that summer with typical summer heat stories against a background of 'still melting snow piles'.

These and other 'excessive snow' and 'snow in unusual places' and 'snow frozen repeatedly (into a) big ice lump' are all part of the larger sets of the 'developing ice age' language that has long been in these reports. The new data sets are suggesting that in spite of the 'push for global warming efforts', the 'climate' will not be cooperative over these next few decades as we experience the 'coldest winter records' in some number of years, albeit in 'very unusual places'. Some of the places showing for really strange weather include Antarctica. The sets for the southern polar region are forecasting the 'climate shifts' in this area to be 'pivotal' for the planet's oceans. Further, the reports of odd weather occurrences in this region will be temporal markers for changes in other regions as the expansion effects alter the earth under our feet.

Your Global Population changes....

GlobalPop is going to get a case of the 'flushes' according to the data sets at the primary supporting position for the GlobalPop entity. The 'flush' is described in the data sets as being a 'period of (approximately) 5/five years'. This 'flush' has been labeled as a 'wave of innovation' in previous reports. The GlobalPop entity now has 'flush' as the top level descriptor. This is further reinforced by many human body process words such as 'skin flushing', the 'blushing (rushing feeling) of excitement', and others including the 'flush to the cheeks at the shock of the new'. These sets are all clustering around and supporting the previously described 'innovation wave' set as modelspace is progressed forward through to 2022.

Within GlobalPop, in the USAPop sub set there are many indications that USAPop is going to 'lag the crest (of the innovation wave)' by about 4/four years. The data has the near 'peak' of the 'innovation flush' in the USAPop as being about 2028. Without regard to the USAPop as a whole, there are going to be many persons with USAPop will be 'participating' in the 'flush' from its inception in very late 2016.

The 'innovation flush' is a very large and growing set that is forecasting a 'break out' of the 'global population economy' from the 'dying dollar empire'. The 'break out' is showing as being 'visible' in the media starting in the first half of December 2016. The 'break out' is also showing as 'gaining momentum' in a very large 'surge' in late February just as the 'Federal Reserve system' is 'staging' (theater?) for its 'final crashing'.

The 'innovation wave' is a large set that includes many, previously reported sets including some of those within the SpaceGoatFarts entity. Some of these included the 'DIY biology', and the 'self altering machines that produce time-like fields'. Other sets at the longer end of this meme include the 'flying carpet (hovering vehicle)' that will be invented in USAPop over these next 8/eight years as both the 'field energetics or dynamics' area of 'energy manipulation (of) matter' disciplines are described as 'escaping (from the lab)' to go 'run wild (in humanity)'.

The 'flushing' of the 'global population economy' is described within the data sets as having a visible temporal marker forecast to manifest in early December of 2016. This temporal marker is described as being a 'fundamental breakthrough invention' that will make its appearance 'out of Africa'. The 'out of Africa' set is very complex, and includes many shorter term sets with details going to the idea of a 'Russian and African collaboration' that has been 'developing for decades'. Interesting details within these sets point to a 'masking effect' of the 'field mathematics breakthrough' that will be described as 'nearly instantly profitable'. It is actually the 'sudden appearance' of the new (self describing) 'third force dynamics' that will be the 'visible tip' of the start of the 'innovation flush' within GlobalPop. The data sets have it that the 'profitable' part of the whole 'break-through' is going to be the first 'visible' sign of the 'flush' beginning. Sets in the detail layers provide the vision of a 'global in chaos' that is 'suddenly shifted (by the) strong (unique) vision (of new) dynamic math' that is 'nearly instantly profitable' and 'productive'. The 'out of Africa' phrase is also an important component of the language that will develop from the 'flushing'. The 'out of Africa' phrase is described as becoming an 'expression' in many languages, though most will take their cue from the 'Russian (paruski)' wording of the expression. The 'out of (or from heart of) Africa' phrase will come to mean something close to 'out of the blue', or 'shockingly (good) and unexpected', or 'beneficial trends manifesting' for future

generations. However, this will not be occurring until another use of the expression 'out of Africa' also comes up with associations to 'new discoveries about human origins' and 'off planet influences'. At that point the 'out of Africa' phrase will cease to be used in conjunction with 'human evolutionary paths and diasporas'.

The data sets are presenting a situation in which 'compounding (of) impact/grow' will be occurring as the 'emigration surge (from EU/N. America)', and the GlobalPop 'flush', and the 'developed world drowning under debt' all join up temporally. This is forecast as being the 'fuel' for the 'emergence' of the 'new (global) point-of-view' that goes to the idea of a 're-imagining' of the 'global social contract'. Interestingly, this 'global mental shift' will take many years to progress and will be done, according to our data sets, without 'global trade deals'.

PopWar – European Theater

As we are all linguists, born to it, growing into it all our lives as our relationship with the words we chose to use becomes internalized over youth, then defining by middle age, please note the choice of words in this heading. Population War (PopWar) – European Theater. It is the 'theater' that concerns us initially. The idea of 'war' as 'entertainment' is not new, nor misleading as war is not as we understand it when caught up in it. During the emotions of the moment, the bigger picture is lost as our emotive response to the events whipping around us like deranged dogs demand our consciousness focus on that alone, that is to say, we see only our emotional state which we then 'assign' to the 'external circumstances'. While not considered particularly as entertaining to those experiencing it, 'war' nonetheless meets the definition. It is also not we who label the 'place of war' as a theater, this definition in english and several romance languages is very old, even noted in the greek. It is so labeled by those who knew, in the past, that all 'war is theater', just as 'all politics is war which is theater'.

Then of course there have always been the 'mock wars' put on as deliberate 'theater' for, or by the 'ruling elites'. As a child roaming Europe, I remember being fascinated by the depictions of ships battling it out in the flooded Colosseum in Rome. Humans are strange, 'war' is destructive, deadly, decied, yet remembered, replayed endlessly, and honored! And it takes place in theaters.

Well, those and many more words will be applied to these next few years across much of the northern hemisphere. The 'theaters' of this next round of global 'wars' will shift from the Middle East over into both Europe and as the elites are planning now, north America. As the 'ruling elite class' (defined by the words from the Tavistock Institute and the Council on Foreign Relations) have decided, it is better for the elites and their minions if the peoples of the earth are 'divided' that they may be 'controlled and conquered'. The old form of division, that of nation states, is failing, and now the idea circulating among the ruling elite is to try the same game plan, just smaller units. Their thinking is that the 'shattering' will allow for 'more control' at a finer degree. The only hitch in the get-along is just that administration of this will require more 'controllers', and that is where the whole plan falls down. The existing stink at the top of the pile is, as ever, and always, reluctant in the extreme to share power with new smells rising up from the rot. So the control structure is also breaking down.

It is to the point of the 'breakdown of control' that the PopWar sets are forecasting. They are suggesting that the 'age old relationship' of the 'assassin' to their 'employer' will become very apparent to both parties in the near term as the 'shake-out' within top level 'heap (pile of rot) politics' starts taking a very

'unexpected' and 'unexplain-able (for a while)' turn with very 'high level killings (suicides)' showing up in the 'european theater' of PopWar. The data sets are suggesting that it will not be until after the middle of January 2017 that we will begin to learn of the 'causes' of the 'eruption' of 'suicided elites (and very top level minions)'. Then the data is forecasting several layers of 'obscuring stink' that will be 'let out' as cover. The real story may be much closer to the 'employer' not 'honoring' the 'terms of the contract' with their 'assassin'.

Other aspects of the PopWar in Theater EU will include 'battles through and over rubble' over 2017 as the 'movements (of the clashes)' go south for the forecast 'brutal Winter'. The data sets are suggesting that the 'ruins' in Italy will be the sites of next reports of PopWar as 'officialdom battles against invaders' and 'officialdom battles against core peoples battling against invaders'.

We are also getting more growth for sets under the 'heroes' of the 'street wars' in northern European cities. Some of these will become very well known throughout the EU. Some in ways no one would wish. We are now getting language suggesting that the 'purge (of invaders)' is going to get very 'ugly' as 'retribution squads (some mostly female)' are going to appear from the 'core peoples' of the 'northern coasts'. These 'squads' are indicated to be 'brutal', and (usually) 'not lethal' as they are after the 'shock' and 'horror' value of what they will do to their 'quarry'. The data sets are defining this as a situation of 'revenge tactics' for the 'core peoples' where the 'victims' of the 'attacks' by the 'invaders' are going to be 'let loose' for 'revenge' with the 'scarred attackers' being 'sent back (to their side of PopWar)' as 'messages to leave'. The data sets are no longer referring to 'control their behavior' and other language about 'go along to get along' with the 'host social order'. Now the data sets are speaking to 'incapable (of adhering to the social contract)', and 'unwilling to accommodate (the barbaric ways of the invaders)'. In the new language sets the details are suggesting that many of the 'squad members' will become known and named (by both sides) by their 'revenge acts'. Examples would be such as 'Sarah Balls' for her 'taking a trophy' from her 'revenge episodes'. Other linguistic horrors coming out of the data include the upcoming morphing of 'pork sausage' language in Germany.

The data sets are suggesting now that 'trained warriors' will be 'directing' the 'core peoples' in the Winter 'campaign' of PopWar. These sets are further describing the 'revenge squads' as what we would call 'organic', but also 'directed', and 'well used'. The idea from the data is that, as forecast in previous ALTA reports, the 'sophistication' of the 'core peoples' PopWar will escalate radically over the last part of 2016. These new forecasts include hints that the 'revenge squads' are a 'deliberate shifting' of an 'organic development' into a 'tactic' for a 'defined strategy'. The data sets are hinting that a 'single mind' may be 'taking over' the 'core peoples' PopWar 'strategy'. The forecast is for evidence of that by early March of 2017 as we examine the 'shifts' that will have occurred by that time in the 'relative positions' of the 'players' in PopWar Theater Europe.

GreatDeltaPop

This area is so named as to avoid using the word 'amazon' though the data sets are specifically referring to the 'greater Amazon river basin'. The data sets are forecasting that 'earth changes' will both 'cede land to the sea' as well as 'remove it from the Great Delta'. The idea is that expansion events over 2017 will create a new 'vast plain' that will be 'draining and drying out' over the next decade while also 'increasing (the area of the delta)' by 'raising the sea floor'. These are two linguistic descriptions of the

same event (very likely) as both are 'raising up' and appear about the same time within modelspace. The differences have to do with the languages of the peoples being affected. These sets are both suggesting that the 'new lands' and 'drying lands' will be changing the 'local social order' over next few years.

As the GreatDeltaPop undergoes the 'new lands rising' events, and these are reported, the data is forecasting that it will become evident to the 'aware population' of GlobalPop that 'something is different' in both the 'spread (propagation)' of the reporting, and the 'who is involved'. Among the 'aware cognoscenti', the latter will be a very large signal of 'deep deep change'.

CanadaPop

CanadaPop is still gaining new sets for the 'discovery' of the 'flexible minerals' that are part of the long forecast 'new electrics' sets. These 'flexible (metal) minerals' are now within the shorter term data sets so we are likely moving closer to their announced discovery. We will know it when we see it as it will compare the 'mining find' with 'Siberia discovery' already made (also forecast in ALTA reports a number of years back). This will be a very significant temporal marker (TM) for the new electrics and **may** also be manifesting just slightly ahead of the announcement of the 'mathematics' from the 'ex patriot German' which will be the final TM ahead of the 'device build-out phase' forecast over a decade ago in these reports.

DeutschePop

In the 'chaos' of the 'dollar break-down' and its 'impact' on EUPop, we have a central focus of many of the 'side effects (of dollar break-down)' being born by DeutschePop. The DeutschePop sets are dominated by 'rage' which has as its primary support, 'street war'. While it may be assumed that these sets refer to the 'immigrant problem', it takes but a glance at the data sets to determine that it is TPTB in the form of the 'ruling elite' with a specific 'USA' focus that is the object of the 'building rage (of the German people)'.

These sets are deep, broad and gaining support both rapidly and in volume. We will be keeping our spyders running continuously through this period so we will have the data to examine in greater depth when time and events permit.

It is enough to say now that the 'crimes (and their details)' now being 'exposed in USA elections' are going to have an element appear that will 'shock and abhor' the 'collective German self image' in such a way as to 'mortally' or 'fatally offend' the 'USA to German officialdom relationship'.

Please note that while many Americans will take this 'offense' to their hearts it is NOT an American population crime, but one that is specifically 'elitist' in nature.

The data sets suggest that 'en masse' the 'German population' will be 'turning to Russia'. It seems to be a natural response given the 'exposure (of the) crimes against' DeutschePop.

These sets have longer term lexicon data suggesting that it will be over a generation (or over 21 years) before DeutschePop will be able to 'relax' the national tensions that will be 'exposed' by this and other revelations (secrets revealed forecast as long ago as 2007) as the 'dollar empire dies'. The good news about this period if there is any, is that never afterward will there be 'internal German negative

emotional connections' to the 'past century' and its 'wars'.

FrancoPop

The data sets are indicating that the French popular 'retirement system(S)' will be 'in dire disarray' as their 'links to corruption (in the markets)' in the 'USA banking system' are exposed as the 'Federal Reserve banking system' goes into 'hyperinflation shock' and 'credit freeze'. The 'corruptions cleansing' within the USAPop 'fracturing political system', AND the 'break-down in USA bonds (as well as global bond market)' are indicated to 'destroy (the) retirement system (of FrancoPop)'.

As may be expected this will not be 'well received'. The data is showing very large, 'angry protests', and 'attacks' on 'government offices'. The data sets are saying that the 'french government' will 'collapse' under the 'popular outrage', and that 'french corporations' will be 'within days (of failing)' as their 'real costs (for pensions)' begin to become 'evident'. This 'retirement crisis' in France is indicated to be the 'fuse (for the next) EU crisis (of existence)'. Apparently EU mandated 'retirement policies' will be 'blamed (in part)' for the 'crack up' of the 'French government' and the 'defaulting (on pensions)'. Much more here. Very large emotional issue that will carry French people into a new government as well as the start of a new 'economic structure', however the data sets will not be examined further due to sheer volume of data to process.

IrelandPop

IrelandPop has new growth in its 'deep Slope' sets that are suggesting that the formative conditions for the 'ambitious project' that has been forecast in past ALTA reports and that may be an 'off-shore, deep water, energy resource project', are within a few months of become 'visible to the public. That likely some time in mid 2017, just in time to be 'overwhelmed' by the 'dire USAPop news', the 'consortium including China' will be 'announcing' the 'deep Slope project'. This project is not only forecast to 'make Ireland' an 'energy producer (for export to UK and EU)', but to also 'shake up' the 'IrelandPop self-image' as the 'extreme nature' of the 'deep sea work' becomes publicized. The data shows that the 'Irish reputation (in China)' will be akin to 'go to guys!' and 'if your engineering is for extreme conditions, you need Irish implementation'!

ChinaPop

ChinaPop inherits the world! Well, fiscally speaking, and more of a combination of an 'inheritance' from the 'dying Federal Reserve dollar empire', and the 'winnings' of a few 'bets' in the global 'financial casino'. The data sets are indicating that a juxtaposition of 'Chinese' and 'Japanese' interests will be exceptionally 'favored' in the upcoming 'currencies crises (globally, but sparked in EU)'. These 'interests' do include 'corporations', but for some reason not yet clear they are defined within the data sets as 'interests' as though 'larger than corporations'. The label notwithstanding, the data is quite clear that the 'benefits' to be extracted by these 'interests' will include 'land', including 'whole valleys (including towns and villages therein)', and 'other sovereign "assets"'. This last descriptor set includes 'citizens (people)' and 'other dynamic assets (livestock, things that move around, or "make work")'. So

this will be a very interesting time indeed. Will the 'former member states' escape the 'EU fate' of being 'ceded' to China for 'repayment of debts'?

There are also data sets forecasting that ChinaPop 'interests' will also be 'claiming property', including 'businesses, land, buildings, and other assets including goodwill, and operating intellectual property' within the USA, among other western nations. These sets are also interconnected to both USAPop 'social instability', and 'global redefinition' or 're-casting (one's role)'. These sets are indicating that 'contention' will be the dominating language within USAPop over this 'land claims', and there are forecasts of large amounts of language in both 'american' and 'chinese' about the issue over several months through 2017. The previously started 'bonds crash' that causes the 'chinese interests' to 'claim assets' as 'corporate bonds collapse (freezing, seizure)' lead to 'defaults'. These 'defaults' are the actual 'legal claim', but most of the 'anti-claim' language will be 'nationalist' in nature. This is indicated to elicit similar response from ChinaPop. All this is going to escalate and be waged across the internet over late 2016 through much of 2017. LT data types indicate a 'reasonable idea (proposition)' is going to come from USAPop that will be 'accepted (emotionally)' by ChinaPop after several 'major Chinese banks implode' over 'internal real estate market scandals'.

While ChinaPop may be inheriting the world, the world has great problems including 'yet more debt' issues that are forecast to arise over early December 2016 that will continue through to March when the 'offending debt holders' as well as the 'claiming credit issuers' will be among the 'Great Leveling' that will be the 'first (great) deflationary wave' to 'ravage global debt markets' as 'reality' or 'mark to actuality' is forecast as 'overtaking corporations'. The idea coming across from the ChinaPop data is that some 'American (based) international firms' are going to try to 'distance themselves' from '(american dollar financed) global elite hegemony of the past century. This is going to 'spark' a 'truth and reconciliation' response in ChinaPop advertising that is forecast as 'feeding the process'. The data is indicating that the 'push to purge (of wrong doing) (with the not-so subtle hints of do it to continue doing business here)' is indicated to 'magnify' the 'oscillating market instability' such that it 'feeds back' into the ChinaPop debt markets as well.

MexicoPop

The data sets are indicating that 'significant social changes' will begin almost immediately following the 'Trump victory', or alternatively the 'Confusion of the USA Election'. The reactions within MexicoPop are not restricted to the 'shares markets', nor the 'political posturing', but also include impacts on 'cross border deliveries' as various 'funding sources' for 'cross border imports/exports' are 'pinched off' by the 'seizure reaction' within the 'credit markets'. However, in spite of the 'pinching of funding' the 'economic activity levels' within MexicoPop are showing as taking a big jump up with the 'Trump victory' and the 'confusion storm north of the border'. The whole of the MexicoPop economy is indicated to both 'consolidate' as well as 'grow' as the 'relationship' with the 'northern insanity' forces MexicoPop to turn to Asia and to southern neighbors.

The data sets are describing a series of 'panic days' in which the 'flow south (across the border into Mexico)' will be so large as to 'strain the system' and have 'delays (of) hours' to 'drive (out of the) USA'. These sets are referencing 'panic', and 'desperation' that is going to 'drive (actually, no pun intended)' people across the 'border' in a 'surging wave' that will seem reminiscent of recent events in Europe only

involving cars.

Much more (as may be expected) in the data about MexicoPop. Much of it is far more pleasant than what will be taking place north of the border.

SaudiPop

The continuing problems in Arabia are forecast to grow exponentially as the 'house of Saud' tries to 'defend itself' in the 'court of public opinion'. While the 'Saudi princes' will end up causing far more trouble for 'hidden directors' and 'lying politicians' and 'deep state operatives', they get no break from universe as their 'internal rebellions', and 'external wars' will be 'going badly' all the while. It will take but a few months into 2017 before the data shows the 'house of saud' finally 'getting wise' and announcing 'nor more oil for dollars'! It will also be true that their 'dollar holdings' will be 'greatly reduced' in all definitions of the word 'reduced' by that time. The data sets are placing the 'saudi announcement' at a hugely critical period for the USAPop in late Winter 2017.

UKPop

The data sets are indicating that the 'breakdown of the rule of law' in both the fringes of Europe, such as Turkey, and Syria are going to have extremely serious consequences in the UK. The data sets are forecasting that PopWar will be coming to the UK in several forms. The actual 'street battles' are forecast for later in 2017 as the 'purge (across) Europe' gains 'visibility' and 'open support' from the EUPop and UKPop.

These sets are also suggesting that information about 'dirty politics' and 'murders' and such that will be 'leaking out' in December will be magnifying the already 'burning social contract'. The 'crash (of the dollar based debt financing system)' will provide a 'hard edge' to the 'end of business in London (and the rest of the "commonwealth")' for 2016 that is forecast to be 'punctuated' by the pending 'information dump' on British 'royals' and their 'minions'. Usual 'end of the year celebrations', including 'annual pledges for a sober month (January or February)' will be both 'easily forgotten' within the 'financial chaos' and 'emerging political upheaval'.

The 'popping' of the 'growth bubble (for the debt system)' is going to hit the UK very hard with much of the damage being centered in London. The data sets are describing a few years of upheaval in UK property markets as the 'property ladder' is 'separated' into a couple of 'poles' and a few 'sticks'. The impact on the 'debt for property markets' will become 'visible' over early 2017 as the 'criminal skim' off the 'economy' slows to the point of 'exposing' the 'frauds' and the 'loss of value' of 'properties (including very high end London)' that will exceed '50% within the FIRST YEAR' of the 'currencies failure'. A good temporal marker for the further leg down on 'UK property values' beyond that first year of >50% will be the 'gold being moved' out of London, as well as 'runs (panic to buy) gold'. When the 'rumors (that quantities of gold)' are being 'removed from London', the data forecasts that a 90% 'devaluation' of currencies will be emerging shortly thereafter.

USAPop

The data would suggest that Trump triumphs over Hillary by a margin so large as to seem and be

labeled as 'ridiculous' in 'modern American politics'. Nonetheless, the 'victory' is indicated to be 'clouded' at several levels. Some of the data sets are suggesting that an attempt to 'install a president' will take place, albeit in a rather 'slap-dash' fashion that ends up being little more than a 'foot-note to history'.

Confusion reigns in USAPop as a result of the 'presidential election'. The 'results' are 'denied', and 'taken into conference' by some 'participating (in the) theater', while self-organizing 'victory parades' are taking place in other areas. The whole of the sets involved with the 'elections' are filled with 'confusion' and 'chaotic thinking', and 'denial (of) manifesting reality'. Those 'confusion' sets do NOT include the 'precious metals', or 'bitcoin', but all other 'financial system assets' including 'real estate' are filling with 'confusion' supporting data sets. Many of these linguistic structures are also going to 'paralysis (of action)', and 'inability to make decisions'. These sets are supporting the Markets entity and would seem to be indicating that the 'participants' will 'recognize' that there is 'risk (having returned)', and 'no clear path (to safety)'.

The 'confusion' sets spread from the 'shock (of the new) political reality' out to 'finance', and 'financial markets' nearly instantly and bring the same 'confusion' elements into prominence within the Markets entity. The spread of the 'confusion' within the global 'Forex and other markets' is indicated to be extremely 'rapid', and extremely 'wild'. See Markets entity for more on this aspect of the forecast. Within USAPop the 'turmoil' in the 'markets' has a nearly instant impact on a very wide and growing portion of the 'paper debt investments'. The data sets are forecasting that the Federal Reserve Bank will be 'operating (at levels) never before imagined' as the 'packaging peels away', and 'risks flood (global) markets'.

The cross links for the various 'markets' sub sets throughout GlobalPop entity are terminating in sets that indicate that the 'spreading confusion' will be seriously impacting 'pre-existing arrangements' (perhaps many of them criminal in nature). These impacts are indicated to include 'stopping' and 'delaying' the 'movements' (payouts?) of 'hundreds of millions of dollars' as the 'understood certainty' of the past 'decades' will be 'disappearing over night'. See Markets entity for discussion of larger impacts.

The data sets has the 'deep state' linguistic structure forecasting a 'wave' of 'government employee "suicides"' that will have the 'news (of the) suicides' being 'eerily similar' to the 'bankster suicides' in recent past. The 'government employee suicides' are forecast as 'creating vast amounts' of internet chatter that will include some 'startling (shocking) revelations' which will appear just in the 'pause' between 'suicide waves'. When the 'chatter' takes up the 'cause (of the) hobbled (bad legs) soldier', the data is indicating that a 'new (political) force' will be 'emergent' from within the group directly affected. The appearance of this 'new political force' will be 'barely ahead' of the 'major crises' with which it will contend over the next 7/seven years here in USAPop.

The data sets are suggesting that a 'weak attempt' at 'control' appears within days of the 'election confusion'. This 'weak attempt' is described so as it is 'spotty', 'disconnected (from reality on ground)', involves '(poorly) trained employees', an 'unclear chain of command', and many more descriptors of similar nature that seemingly are describing a 'poorly conceived, improperly implemented, no goal plan'.

The emotional sums of the USAPop primary descriptor set of 'confusion (election)' are coming into modelspace before the election and building rapidly thereafter. As modelspace is progressed forward

from October, the 'confusion' based emotional sums are growing and will be dominant from mid November through to late December. Not that 'confusion' goes away, it is just that modelspace has the emotional energy being redirected into many other areas of what will be passing for 'life in these united States'. The data is showing that other challenges in the areas of 'weather', and 'natural disasters' will be magnified by our 'spreading financial system ruination' such that the 'confusion' of the 'election outcome' are going to be less of an issue.

The 'impairment' of the 'global banking system' has some very interesting side effects. Many are being referenced here in USAPop. These 'side effects' are indicating that the 'first layers' to 'float (off) the failing banks' (also defined as 'become exposed (and non supported)') will be the 'corruption' and 'malfeasance (at officialdom level, banks et al, employees et al)'. These sets are indicating that 'tens of millions (of global banking employees)' will be 'fired' or 'dismissed' or 'abandoned'. The data has many of these employees also 'aware participants (in the corruptions)'. However these may be 'hidden participants' who are 'riding (the tiger (of their employers corruptions))'. The data sets are forecasting that the reactions of the 'hidden layers' will 'kick out (the floorboards)', and induce a 'global exposure' of 'widespread corruption'. This exposure will not only 'destroy pension funds (here in USAPop and elsewhere)' as 'shares melt down', but will also 'induce social changes'.

These social changes include people 'changing their names' to 'not be linked' to 'global criminals'. Other changes are indicated to include the 'rupture of families' as 'cousins' discover their 'relation to criminals'. Other side effects include 'criminals (the more open, non political kind)' who will 'skate by' due to the 'developing judicial' and 'political/economic crisis' here in USAPop.

Baby boomers are 'kicked out' of their 'pensions', and 'homes' as the 'health' of the 'economy' reaches the point of 'government (caused) failure'. Much of the new language in the 'kicked out of house' sets are also tied back into the 'confusion' sets. These cross links also bring in the 'big bank' that 'is dying (data favors it being a USA institution) within the structure. The way in which the supporting sets grow suggests that a 'big bank' reaches a 'point of desperation', and 'dumps out' their 'cache (of) mortgages'. The idea would seem to be that a 'giant mistake' emerges from a 'small action' {ed note: likely a 'wrong key press' in data is going to be accurate but not revealed}. The 'giant mistake' is further described as including 'wrong people (victims)' and these are showing as being in the 'millions'. As may be expected, this situation of 'foreclosure run amok' is also showing as 'inciting political change', and in a fairly 'rapid pace'. The detail sets show that the 'protests' against the 'dumping (of) houses' and 'wrong foreclosure' will get both 'violent' and 'viral' as videos of 'attacks' on the 'offending bank' lead to 'national copycat episode'. It would appear that even people not affected, that is to say, people who are not victims of the foreclosure will still 'participate in the bank hazing' and 'assaults on banksters'.

The data sets are indicating that the 'police' will be 'brought out' in 'force' with their 'armor' and their 'armored vehicles' to 'protect the banks' and the 'banksters'. The data shows that, indeed, the presence of the police with their rifles, and watch towers, and technology does work to stop the 'bank ATM burning' in those areas where the police are able to be stationed in force. However the issues for TPTB and the banks become both the 'spread out' nature of the national banking system', and the 'decentralization' that will have 'every bank manager screaming at the top of their lungs' that 'their branch is critical' and 'requires protection' from it's customers. The data further describes the 'lonely police' who will first be 'scattered' to the various ATMs until that strategy 'fails', then they will be clustered around the 'branches deemed strategic' until that fails. Then it will be 'protect the vitals'. At that point, the 'police' will be

largely broken up and ineffective in a number of areas within the USAPop. This will be after only a brief few months of 'no pay', or 'money that won't buy anything', 'or family/community displeasure and censure'.

While it is primarily the 'baby boom generation' that is described as being 'victims' of the 'foreclosure big mistake', the other victims include the children living in basements who will also be 'in jeopardy' as a result of the 'aggressive foreclosure mistake'. Some of the 'children also affected' are showing up with the data sets as being 'rising political stars' as a result of the 'big foreclosure mistake' and its rippling ramifications through the USAPop. Their vehicles will be 'new media'. Some of these new 'displaced' or 'instantly homeless' will become 'stars' of the new media, as well as 'mega-global-internet fabulous' in spite of the 'breakdown' of the (former) USA centric media view promulgated by the 'dying mainstream-propaganda media'. In our data sets are new areas of growth indicating that 'backlash' against the 'lying USA mainstream-propaganda media' will include many within the USAPop millennial generations. Please note that this will become a very crucial trend in about 12/twelve years.

Others of the millennial generation(s) within USAPop are indicated to 'rise (to) public prominence' as a result of their 'participation' in the 'global innovation wave'. The data shows that these individuals will include some 'charismatic personalities' who are going to 'shape (youth POV)' within USAPop. The data describes these people (including some 'young expat germans') as being the 'leading lights' for their generations within USAPop as they 'look outward' for 'new frontiers'. The 'look outward' does include 'space industry' as a very large set, but in general the supporting sets are focusing on South America, Asia, and Africa. The data sets have details describing USAPop 'millennials' who will 'come back rich' from their 'ex-pat status' to 'pitch' the 'new frontiers (of Africa/Asia/S. America)' to the 'poverty destroyed USAPop youth'. Some of these new 'shining examples of young success' are indicated to 'get into trouble' with the 'USA political class' as they are seen as creating a 'talent drain' by 'talking up emigration' as a route to 'entrepreneurial success'.

The data sets are forecasting that the 'worsening cash crisis' will lead to calls to 'forgive' the 'criminals' such that 'drug dealers' and others with 'cash stashes' will be 'offered redemption for dollars' as the local governments start talking about 'pay to get out of jail' policies. These are indicated to 'break open' the 'last parts (of the) judicial system' such that 'peoples courts' begin to 'form' in which 'independent parties' are 'paid to compose and judge matters fairly'. At this point, the temporal markers for "people's courts" are going to prove to be the beginning of a very 'fiery period' in USAPop 'political evolution'.

As modelspace is moved through the new year (on ST and LT data sets primarily) into late Winter, the 'confusion' issues over the 'election chaos' are showing as being 'cleared up'. What the DeepState had hoped would be an 'acceptable victory' of the 'corporations corruption model' is indicated to be 'crashing' along with the 'fake money (federal reserve notes)'.

For USAPop the data sets are describing a 'very bad, and very very long year'. The data sets are showing that the 'fiery period' for USAPop will be 'marked', as in 'tattooed' with what can really best be described as "the seismic event". These sets are labeled throughout the supporting structures with 'earthquakes' as a plurality. This is further amplified by repetitious appearances of multidimensional descriptions in which 'earthquake' is only used within the first 'few hours' of 'the seismic event'. Note that the destruction is indicated to NOT be proportionate to the 'defined magnitudes'. In other words it may be a 4, but kick like a 6. The idea coming up through the descriptors in both the Terra entity as

well as the USAPop entity is that 'fracking' will have created a 'lattice work' of 'crushed rock' that will be 'amplifying damage levels' for the 'seismic shudders' we will call "the earthquakes" for a number of years.

College Degree deflation in the sense that 'universities' and the 'expectations of life (post graduation)' are going to 'disappear' as a 'guiding path' within the 'American social narrative' over these next few years of the 'Unfolding' of the 'crimes of the power structure'. The data sets are suggesting that a period of over a generation is emerging now in which 'universities' and 'colleges' will be thought of as 'from then', in much the same way that the French population had a 'before the guillotine' and 'after guillotine' view of history.

Minority 'employment crash' then 'work boom'. The data sets have an 'urban work crash' that will 'affect minority hiring' over the first part of 2017 in ways not seen in decades. This will be due in part to the 'credit freeze' and the 'breakdown (of the) just-in-time delivery system', however part of this is also indicated to occur as a direct result of the 'erosion' of the 'democratic party (and its ancillary organizations)'. The good news in the data sets include a 'revival' of 'self determination' as a rising meme within the 'urban minority population' such that 'visible evidence' is presented over the last half of 2017. This is appropriately good timing according to the data sets as the 'seismic events' in the northern hemisphere will be requiring much more in the way of 'self sufficiency' in general, and especially within 'urban environment's. Other aspects of the more positive forecasts include a 'general return to inventive activities' including 'urban farming', and 'urban manufacturing'. Note many of the centers of the 'new electrics' are shown as being in 'inner city production facilities' that spring up as the 'formula' and 'protocols' become both 'known' and 'tested (and replicated)'. One of the larger memes within the 'minority work boom' is the linguistic difference between 'working' and 'is/been working' will be expanded to new definitions to include 'has work' with the 'ownership (entrepreneurial risk/reward)' aspect denoting 'respectable public-good supporting activity'. This linguistic change should not be discounted as it will be a solid temporal marker for the 'emergence (at that time)' of the 'new (american) morality' to be expressed in a new symbology.

The idea coming up from the data sets is that the 'make-a-way' movement begins in 'urban America' as the 'sudden crash' of the 'support system' will force new approaches to 'everyday life' in the sense that 'new' everything will need to be 're-invented'. New food sources, new energy sources, all of it. The data sets are forecasting that the 'plan of the elites' is going to 'run into bad timing issues' such that 'it will fail', and USAPop will be faced with 'adapt or die'. Many will die. Circumstances will not favor them. Others will be able to adapt, and will lead yet others into new paths through our emerging 'years of struggle' here in USAPop.

Real estate as an 'industry' is about to encounter spectacular conditions that create 'abandonment' of the McMansions at heretofore never seen levels. The 'abandonment' sets are describing a strange situation where the 'foreclosure attacks' by the 'banks seeking blood' are going to be responded to about half the time with 'acquiescence', followed by abandonment of the property to the 'fates', and the other half will be 'fierce resistance' and 'legal responses'. The data sets are suggesting that a 'conundrum' or 'great problem' is going to be 'created' as the 'half (of) USAPop' that 'fights eviction' cause the 'great court clog of 2017' just as the 'justice system' is under 'the most severe attacks' in 'centuries'.

The idea is emerging in the data of a 'deliberate strategy' to not only fight individual bogus foreclosure,

but to also 'clog the courts' until 'justice prevails'. There are hints of a 'national organizing presence' behind the strategy. There are also other hints within the longer term data of the 'rebellion mind' catching 'fire' within USAPop as several of the 'successful property owners (in the SW? Arizona? Nevada?)' will become 'international heroes' for 'having beat the banksters'. However, these are but 'early years' examples. The real estate markets globally have been 'fueled' by the 'credit creation machinery' of the 'western central banks'. All that is going away, as will the 'global real estate market' as we know it today. Further pain within the USAPop real estate markets will emerge from the 'fracturing politics', and the 'ripped up/destroyed political landscape'. The 'instability' of a nation is NOT good for 'real estate prices'.

Other sets for 'abandonment' within the 'real estate deflation' sets are describing the 'banks' as 'giving up'. Some of the 'giving up' language is forecast to arise from 'new persons (working for the banks)'. These sets are within other sets that are forecasting a 'great purge' of 'employees' within the 'banking sector'. The memes showing at the detail layers are of 'bank employees' who get 'fired' due to the 'crack down on corruption', then, as they were 'rubbished' and 'not protected', they 'mouth off'. The 'ex-bank employee as whistleblower' meme has many levels of support, and extensive cross links. The cross links are describing a USAPop 'scandal' that is the 'mother of all corruption scandals'. The data shows that the 'mid level employees' turn out to know a great deal more about the 'operation' than (would be/ will have been) thought by the 'upper management'.

The new USAPop government is not viewed as 'legitimate' by USAPop and all kinds of 'reactions' occur. Confusion is the ruling linguistic structure that dominates the emotional sums at the top level of support. The data sets are describing 'confusion' to the point that 'worst case scenarios' are 'put on stand-by' in a number of places by large scale organizations both private and government.

Budget crashes. State level. Local government level. Also, all the subcontractor organizations that work for state and local government are going to be hitting the 'budget crash wall'. The data is showing that the 'corporations' that are the 'largest costs' for 'local and state government' will be 'struck off' the 'public dole' by the 'crashing dollar'. These sets are indicating 'yet more problems' for the 'central banksters'. As modelspace is moved through November and into December the data accruing in support of the 'central (banks) authorities' going into 'panic mode' that will be 'visible' to the point of 'video' showing '(too many) presidents (of Federal Reserve Banks) arguing (in public)', and 'abusing (minions) and reporters' out of 'desperation'. The images that will come from this incident are indicated to become 'meme icons' of 'out of control', or 'losing it (in public)'. These sets are filled with language about the 'struggle' of the 'central authorities' trying to 'defeat' the 'rising enemy (of crypto currencies)' and 'alternatives (to the) dollar'.

The 'continuous' and 'constant inflation' of the '(dollar) money supply' and the 'dollar-proxy currencies', are indicated to cause a manifestation we are calling 'the shedding'. The 'shedding' is a new meme {ed note: likely misnamed herein, but the actual label for it still is showing as 'unknown'. This means that we have a meme we can describe, but the populace will have to settle on the 'new word' that will be its name when it actually manifests late this year and into next.} that is describing a 'deliberate removal' of 'all things dollar-world' from ones' life. There are many emotional ties to this 'shedding movement' that describe it as though 'addicts getting off drugs' or 'people leaving repressive religions'....it is being described as a 'feeling of liberation', of 'new freedom' such that many people will be 'making videos' about their 'new liberation' from 'paper currency' and 'central bank tyranny'. The data describes some of

these videos as very much like 'a 12 step program'. While the data shows this as a 'cross generation' meme, with very 'bonding (emotional) ties' being captured in the videos, the meme is indicated to 'flare up' from the millennials and to take its emotional tone from their expression of 'new (mental) awareness (of) personal (liberating) action'. The data sets are showing that for many of the millennial generations, this is going to be initially viewed as a 'yet another (internet) challenge', but will turn out to become 'their (life altering) pivotal experience (of their youth)'. In some of the language we get echos of the language that arose from the participants at Woodstock in 1969. A meme that will change the internal perceptions of a generation!

These sets are describing the global millennial population as 'struggling (to define) their lives' in the 'decades of paper money death' with a forecast of a 'collective response' so large as to 'provide (the emotional energy (of tens of millions))' that puts a 'global floor' under 'crypto currencies'. The data sets are showing that the 'personal liberation (from central bank tyranny)' movement are going to 'flip (throw/propel/overturn/upend)' the 'global monetary system' in less than 'a single year'.

Taxes collected crash (2017) as the 'tax revolt' becomes a 'national force' in the midst of the economic 'plunge' into 'shocking deflation'. Much of the language builds around the idea of a 'national tax revolt' as the perceived 'lame' or 'limping government' of USAPop goes on a 'pension harvesting spree' that is 'claimed as 'required' for the 'emergency period'. The idea is that 'legislative authority' is some how 'bent' to the 'goals' of the 'deep state' is forecast as a very large meme that will evolve from an 'incident' of 'exposure' of 'deep state control' over a 'minor legislative issue'. The 'bent legislative incident' is indicated to grow to a dominate theme as 2017 moves into Spring.

Military bases being closed, and abandoned. Hidden money relationships, including 'corruption' and 'murder' are forecast to be revealed by the 'global pull-in' of the USAPop military. The data has 'hundreds of bases' to be affected by 'currency crises' before the end of April 2017. Further sets are suggesting that the first of our 'begging for a lift home for the soldiers at these military bases' episodes will be shortly following yet another 'major corruption scandal' that will be 'breaking out' {ed note: remember this language in Spring 2017} throughout the 'dark ops' world. The data sets for the 'no money to bring the soldiers home' meme are gaining more new shorter term and immediacy data than longer term. This is not to say that the longer term data grow has declined, but rather is now being overtaken by the more near term data types. The implication is that there will be some near term visibility as the meme manifests, but that there are still many longer term impacts developing. These data sets have been growing since early in 2003. The core of the data sets goes to the idea of the USA 'military' running out of money to 'bring soldiers home' from some of the 'hastily abandoned military bases'. The 'running out of money' is a complex set that shows many countries and corporations will not be accepting 'Federal Reserve dollars'. In some of the supporting sets for this meme there is reinforcing language going to the idea of 'local area collections' and 'charity' that will be 'used to raise money (for) airfare home for American soldiers trapped (out of) the USA'.

The 'crashing (credit based) speed' of 'currencies (circulating)' through the actual economy is showing as 'rearing up (jumping up suddenly)' as the 'election confusion' starts to take hold in the USAPop. What is indicated to 'shock' the 'markets participants' is 'how rapidly' the 'obamacare health insurance system' is going to 'crash'. The data sets are forecasting a very 'brutal drop' in the 'volume (of) available

money' for the 'healthcare industry (from the insurance side of things)'. This is indicated to 'arise (appear/present (itself)) so fast as to seemingly 'catch (the) society unaware (and) unprepared'. The result is indicated to be 'rapidly failing clinics', 'hospitals (that) can't pay staff', 'suppliers (not) being paid and refusing deliveries (to hospitals/clinics/government medical institutions)'. The supporting sets are focusing on the 'credit freeze' and the 'slowdown (or outright failure)' of 'state and local government spending') within USAPop. These supporting sets are incredibly diverse and reference millions of products and procedures. This is unusual in our work, and needs to be understood as tens of millions of people, perhaps hundreds of millions, of USAPop getting on line to complain about not being able to get 'XZY medical procedure'...or worse, not having it paid for, and 'being collected (by the system)'.

The 'credit freeze' language continues to grow at very steep rates in emotional sum values as well as to gain breadth and depth with new supporting sets. All of this language can be encapsulated into 'broken', 'chaos', and 'frustration'. The data is describing a situation developing in USAPop over this next year as a 'seize up (or 'lock up' or 'frozen tight' or 'clogged up' or 'not moving' or many others in the same meaning context)' in which the 'banking structure' goes 'rigid' in the sense of 'getting credit' or 'cash'. As the current USAPop 'banking system' exists at the level of 90+ % being 'debt' (another name for 'credit') the 'seizure' of the 'debt system' means that all of the 'functions' of a 'bank' will fail. This is showing as being 'system wide', meaning that the USA based banking system, including all its 'foreign branches and operations' will be 'seizing up' like an old jeep in a deep water filled hole at the top of a lonely trail on a high mountain in the middle of a very cold and snowy winter. All of which means, as the data says much more succinctly, 'no rescue' for the 'federal reserve note (and its system)'.

The data sets are showing that the 'credit freeze' means 'no checks cashed', and 'no checks honored'. This does not happen everywhere, at least not all at once, nor all in a day. The data is forecasting that first it becomes a 'regional issue' at least in so far as how the data describes. The descriptor set is filled with language in support of 'business' that will be 'grinding' down to 'no activity'. Bills may be given to the post office, but delivered? And then the problem is 'will the banks honor them?' After that, the question becomes "is the Federal Reserve Clearing House System functioning?" and will it long enough for the funds to be transferred and your account 'cleared' of the charges? It is going to be a 'stinking huge mess' that will 'slowly roll across the business landscape' like molasses-monster (slowly) run amok!

Other problems will come from 'empty ATM'. This and 'banks' not performing any 'lending', including the 'credit floats' that will be 'desperately required' for 'payrolls' and other functions including 'trade' and 'delivery of goods in transit' will be causing forecast 'business crashes' over all of 2017. The data sets are showing that 2017 will be a year of 'staggering business failures' as the 'rot' is exposed by the 'bribery' and 'corruption' that HAD BEEN supported by the 'Federal Reserve Note (criminal) empire'.

Much of the 'chaos' forecast within USAPop is indicated to be a result of the 'corruption exposed' and the 'new ethos' that will be emerging within USAPop over 2017 through 2029 as 'morals' and 'ethics' will be 'touted' as the 'basis for success in (business) life'!

Break up or re-invention' of the 'democrat party' is showing up in the longer term data for later in 2017 as the 'financial failures' and 'corruption scandals' continue to induce yet more 'resignations' nearly 'weekly' and yet more 'investigations' as may be expected. The unexpected components to these sets are the forecasts for the large numbers of the 'republicans' who will also be 'leaving government service'. It

seems that corruption runs as a river, and 'both sides' of the aisle (bank) will be 'cleansed' at the same time.

Other side effect of the credit freeze includes the forecast realignments 'of power' within the 'relationships between the states'. These sets are indicating that 'states' with 'resources' especially 'precious metals' will, over the course of 2017, find their 'relative positions' within the 'federal alignments', as well as 'regional politics' become the 'sought after date to the dance'. The data sets are forecasting that the 'regional politics' will be much more important as the idea of a 'fractured USA national alliance' is a 'possibility', maybe even 'probable'. The forecasts include that 'power (electricity, coal, oil)' and 'food resources' will become rapidly involved in 'interstate bargaining'.

Other side effects of the 'credit freeze' will include no more 'snow birds' as the 'annual migrations' of 'seniors in motor homes' become 'victims' of 'government economic crisis' and 'failing purchasing power' and 'failing (collapsed in some areas) supply chains including gasoline'. These sets are suggesting that some of the 'senior population' will be 'unwittingly relocated' as they become 'stuck by (financial) circumstances' over this coming 'winter' and 'spring' (northern hemisphere). These sets are indicating that there will be some amount of internet language about the 'economic downturn' all along the 'snow birds migration trails'. Other institutions will also feel the impact as the 'retirement system' becomes a more visible 'casualty' of the 'credit freeze'. The data sets are indicating that many of the 'snow birds' are going to be placed in a position of having to choose a location this coming year as the conditions will prohibit moving about as 'hyperinflation' will hit, and as the 'just in time supply system' grinds to a halt with the 'credit freeze'.

As the 'credit freeze' emerges across the USAPop 'financial landscape' new forms of 'new economic activities' will also be emerging. Some of these will revert back to 'regional power structures' while others will seem to go even further back toward something 'feudal'. In both cases, these are but steps along the path that will take us to the long road ahead, so nothing to be too alarmed over. There will be many reports of 'extreme circumstances' over the next few years within USAPop, and many will be quite real, however the 'early prognostications' for where USAPop is heading are but the 'reactionary' or 'alarmist view'. These are the people who while be shouting about the burning building and the smoke and confusion around them, never even imagining the 'rebuilding' that will follow. However, readers of the ALTA reports are advised to take heed of 'bad behavior' and its 'spill over effect', and to proceed cautiously.

The 'good news' to be had from the upcoming 'political fracturing' and its 'visible manifestation' as the 'financial' and 'economic' systems come under 'unyielding pressure'. The data is piling up supporting sets under the 'economic expansion (of debt in China)' as 'hitting the maximum limit' such that the 'global banking system' is both reaching the 'end of the expansion possibility' as well as the point at which 'political support' disappears from the 'concealing politicians'. These 'concealing politicians' are described as 'fleeing' in different forms' as the various 'layers' of the population are 'exposed to public scrutiny' over 'past crimes (against) the public good (wallet)'. Fundamentally the 'debt bubble' is 'popping globally', no longer putting support under the 'currency markets', and thus the 'central banks'.

Yet more 'central authorities mischief' is being forecast becoming 'revealed' over the next few months as the data sets are describing the 'removal' of 'Yellen' from the Fed and the 'push (for her intended) replacement'. The data sets are arguing that the 'internal politics' and 'mechanisms' of the 'Federal

Reserve' will be 'thwarted' as the 'israeli' (who is chosen to be the next Fed chairman) is 'disrespectfully dismissed' as a 'viable candidate'. Further problems for the 'chain of command' within the Federal Reserve Bank include the 'daily damage' being done to their 'confidence level' by all of the 'horrible stories' being 'exposed' that 'demonstrate evil intent'. These sets are also coincident with the 'disrepute (of) israel' which is a group of sets going to the idea that 'corruptions' within USAPop 'ruling elites' are going to 'spill (blood) onto Israeli hems'. This is a metaphoric 'spilling', but the 'taint' language is rising in emotional sums rapidly. There are other supporting sets indicating that there will be 'open fighting' in USAPop both within the 'population' as well as within 'government' that will be 'openly emerging' during the first of the 'money shocks' in early 2017 about 'canceling aid to Israel'. The data shows that by mid Summer of 2017, there have been mostly successful moves by 'officialdom' (what is left functioning enough) to shift the language to 'how much should we give to Israel' with the intent of ending up with the idea of 'how much we should reduce the aid to Israel' with their intended answer being 'not much'. However, the data sets are suggesting that this is plan will be washed away during the currencies crises that emerge over the rest of 2017.

Please recall that ALTA reports have steadily maintained that Yellen was chosen as a 'throw-away' to be used to 'soak up anger' at the 'appropriately timed juncture' during 'known to be coming dollar crisis of confidence'. It will be interesting to watch the Federal Reserve Banking system in chaos as their plans and their crises all deteriorate simultaneously with their (former) political support. The data sets are even suggesting that the mainstream-propaganda outlets such as teevee news will be 'forced' to 'report on (the) chaos within the banking system'. This is showing as a temporal marker to the 'failure (outright)' of several major 'mainstream media outlets' as their 'payrolls' and 'facilities' are 'shut down/off' by the 'credit freeze'.

The same 'Federal Reserve indecision' and the 'presidential election confusion' that is forecast as causing problems for the 'pension system (of) France' is also showing up as 'devastating' the 'pensions' and 'social security system' here in USAPop. This is showing up as being a 'big point (of) national debate' by early December with 'fatalities' being 'blamed (on) indecision (and) inaction' by early March of 2017. Much of the language in supporting positions for the 'fatalities' are referencing the 'breakdown' of the 'pharmaceutical' side of the 'just-in-time supply system'.

As the 'political fracturing' continues apace the leaks and the 'secrets revealed' about the 'corruptions of power', the data is indicating that this period is going to be hugely 'difficult' for 'democratic party faithful' within USAPop. Much of the language showing up is eerily similar to what may be found in the 1800's that led to the resignations of over 50,000 Freemasons from their lodges and directly created the Anti-Mason political party here in USAPop. The language showing up for the 'break up' and 'break down' of the 'political party structure' at the level of the 'participants' not the 'party movers' and not the 'party workers'. These sets are focused on the 'crushing (mental/spiritual) burden' that will be 'laying upon' all of the 'party faithful' who will be some of those in USAPop who will be 'most burned' by the unfolding of the 'secrets revealed' meme.

The data are forecasting 'social contract change' at levels that, while reflecting the 'anti-mason' language, are several orders of magnitude greater in the current emotional sums. The implication is reinforced by the very long term data sets that are within these areas. These are forecasting that the 'political fracturing' is just the set-up for the 'political restructuring' such that it will last over '4/four generations' or over 88 years.

The 'public linkage' or the link in peoples' minds between the 'unfolding (secrets revealed) exposure of the corruptions' and the 'financial panic' (and its long running aftermath) will also reinforced both the emotional pain, and the 'repulsion' at the 'decades of deception'. These data sets are presenting a picture of a 'dedicated public' whose 'fundamental morals' will be 'repulsed' JUST as their 'economic world' falls apart and renders the vast majority of their country, as well as their vision for the future, in 'ruins'.

The data sets are describing a USAPop trying to 'make a way' through the 'chaos' of the 'destroyed (locked down)' financial infrastructure. These sets have 'armed police' and 'military (eventually)' who will be 'guarding (the) major banking centers'. Banks outside of the major metropolitan centers will be given 'rent-a-cops' and 'private security' as their 'armed support'. The data sets are suggesting that this will NOT end well as the 'crisis continues'. The data shows that 'private security' will provide a number of instances of 'arming (your) robbers' and 'giving them the keys'. Other results will include 'private security run amok' when their 'employees' are faced with 'mobs'. Many more sets with a huge range of immediate effects of the 'financial panic' that will be the direct result of the 'overseas reactions' to the USAPop 'state of confusion'.

The rest of the country will be 'increasingly left to fend for itself as the credit freeze continue to 'ice across' USAPop financial landscape. The picture being presented includes 'ATMs' being used by mobs as 'soccer balls' (with their trucks). Other imagery includes details forecast to include 'real horror' for all of the 'social justice warriors' as their whole existence will be 'ignored', by their entire audience, once that audience has to actually 'work to eat (survive)'. This is going to be part of the 'Great Unwinding' as the 'life supported' these last few decades will nearly 'instantly vanish', to be replaced by a world seemingly so 'harsh' as to spawn generations of 'deeply philosophical novels' and books about the 'meaning of human suffering'. None of these will be created in the near term as time and resources will not permit the luxury of 'reflection'. That is for future times when there is the freedom to 'retire' and 'explore the life lived'. Now we move into a time, already previously labeled as 'The years of our Struggles'.

As the longer term sets are examined in modelspace, USAPop goes into a period of 'rediscovery' what we are capable of at an individual level. Most of what will be reported initially will not be favorable to our self-image. But this is understandable, and we as a nation will have to come to grips with the reality of our situation, and that will both take some number of years, and will not be pretty. The data sets are describing the 'early years' as 'defining our state of misery' and 'linking (our) individual suffering' to 'corruptions at the top'. The data sets are describing the 'deep pain' of the next decade's 'financial destruction' as the 'cementing emotion' for the 'political reformation' of USAPop (seen more visibly from 2018). In several years, please recall the use of the word 'fracturing' for the descriptor for USAPop political structure.

The attempt over 2017 of the 'remnants' of the 'global power elite' to 'impose (their) monetary solution' to the 'unfolding currencies crash' hits a wall, in the data sets, in the form of almost instant 'collision' with the 'flailing' and 'failing political structure' within the USAPop. Basically, the data is showing that the 'political power structure' here in USAPop is so 'screwed up' with most of the 'established members' of the 'power elite' in 'desperate scramble mode' to 'cover their own ass' for all their 'crimes' that there is no 'political will' showing in the data sets as being 'capable' of 'imposing' the 'world (elite collective) currency solution'.

As modelspace is progressed over the next few years, it shows a total of 3/three such 'global elite solutions' being offered to the USAPop as 'their way out (of the financial pain)'. Each, for differing reasons is rejected. The first, and the one the 'elite banksters' are most confident of, is the 'world bank money'. When this 'fails to be accepted' within the USAPop, even though the economy will have 'suffered a large (huge) drop' in 'government statistics' it will still be referenced as 'key' and 'lynch pin' and 'pivotal' in global press. Thus the 'failure' of the 'world bank money' to 'gain any traction' in the USAPop will lead to a second proposal within less than a year according to modelspace movements. The second proposal is indicated to fail as it will not be either 'strategic' or 'timely' for the Russians and the Chinese as 'economic enhancements' within their areas of influence will be 'escalating' as they are viewed as the 'source' for 'energy', and 'new technology' within dollar-free, global markets.

The third offering fails because enough of the USAPop has already entered into the 'make-a-way' stage of our 'years of struggle'. This will mark a 'turning point' that has been long forecast in these reports when all things 'independent yankee' will be taken up again as the USAPop, especially the hard pressed, and suffering '(formerly) employed population' part of it, becomes 'desperately' in need of 'moral/spiritual fiber' to 'endure'. This will lead to a forecast 'resurgence' of interests in 'stoic Americans' as role models. The appearance of this trend will first be tentative, given where we will be 'at' as a nation, both emotionally, and politically, and functionally, HOWEVER, please note that the aware observer will be able to use the 'return of pride of image' in the 'old yankee stoic' can be taken as a very positive temporal marker, though do not expect to see it for years yet. And those years will be viewed and so labeled as 'our years of struggle'.

The rise of 'political chaos' at this particular time, as is showing in modelspace, will be labeled in history as 'pivotal' to the 'failure' of the 'global elite central banking system'. The data sets are putting 'political chaos' within USAPop right up there with 'shrinking global oil supplies', 'falling ocean levels (rising lands)', our soon-to-appear 'ice age', and the 'global currencies crisis on the break-away civilization' as being a 'primary factor' for the 'historic' (or 'monumental') changes we are about to experience.

These coming years here in USAPop are forecast to include really tough times as we learn to 'rapidly rediscover' very old ways of doing things, then to 're-invent them' around either 'modern resources', or the 'lack thereof'. These are the 'Cuba-like years' in which 'American youth' are going to be educated by universe in new ways of doing things simply as 'we must'.

Yes, the 'struggle' will be 'economic', but at its core is the 'rotting empire' stink that will have to be dealt with through opening the wound to let out the pus. And the incising of the infected flesh. This will be the next two years politically here in USAPop. Prepare for it now. The Art of Peace (aikido) offers that compassion for others will defuse 99% of all conflicts. That remaining 1% are (obviously) cases of mental illness, and so compassion must also be extended to oneself for what must be accomplished.

But not to worry, the really long term data shows that by 2050 it will be 'cool' to be a norte Americano again. Mostly the data is showing this to be true exactly because of the decisions that we will all make, that's right, I am speaking to you, over these next 10/ten years.

Markets

The Markets entity has new primary supporting sets headed by 'pinching (off)'. These sets are describing a nearly 'instantaneous seizure reaction' in which the 'arteries of funding' within the USAPop financial structure are 'pinched off (funding stopped abruptly)'. The data is arguing that it is the 'unintended consequences' of the 'Trump victory' as well as the 'confusion' within the USAPop election.

The 'pinching' of the funding 'arteries' is indicated to have a 'ripple on effect' within the 'financial system' that includes the 'banking system'. These data sets have pointers toward individual banks' as well as the 'banking (flow of dollars) stream' that is also being shown as being 'constricted' by the 'pinching effect on the arteries'. These sets are suggesting that the 'constriction' is on the ability (and or the speed of motion) to create dollars. Yet another interpretation would be an ability to create dollars that is being restricted by its 'acceptance space (and or speed)'. These sets are arguing that the 'dollar' is going to 'sell off' as the language of the traders expresses it.

This is forecast as being a period of 'heaving dollar' as the 'traders' are also 'heaving (puking vomiting)' over the 'speed' and 'whipsaw' of the 'currencies' as the 'dollar empire' is being 'rocked' from within and being 'eroded' from the edges. These sets are describing a series of 'waves' of 'nauseating currency moves', against each other and collectively against precious metals and some other assets. These 'waves' are indicated to begin very shortly after the 'fading (of the USAPop presidential election' into 'confusion' instead of 'resolution'. The 'waves' are forecast to continue over the rest of 2016 and into March of 2017, before 'resolving' the 'global currency crises'. Unfortunately for all concerned, the 'resolution' is indicated to be a 'global sell off' or 're-positioning (of the) global currencies against gold/silver'.

The 'dollar problems' that will be 'emerging' over the rest of November and December will not only drive 'gold' and 'silver' into 'growing (premiums)' as well as 'expressed fears of developing shortages'. Note that these sets are also reporting that not only the language of fear will be discussing the 'fears of shortages', the data also forecasts actual 'shortages' as the 'fire (panic to own)' starts to 'grip the global precious metals' markets as the USAPop 'mental instability' and 'confusion' continues further into the end of the year.

The data sets are referencing several aspect/attribute sets that are going to be 'tying Bitcoin' and 'precious metals' as both are heading up as the 'currencies' are going 'down'. The addition of the 'crazy days' of the USAPop and the 'USA markets' are showing up as being 'crazy making' for the 'global markets' for 'assets' and the 'gold/silver/bitcoin' are valued against. The data sets are indicating that the 'break-down language' around the 'USA government' and the 'federal reserve bank' are going to have very long lasting effects lasting over a decade that will result from the 'decisions' or 'lack thereof' that will be or won't be taken over these next few months. The data sets are forecasting that the 'federal reserve bank' is going to be facing it's 'end state' for the 'Federal Reserve Note'. These sets are gaining more support as modelspace is progressed from November into December and beyond. These new supporting sets include 'break-down (of the dollar (and other currencies))' against 'gold (and silver and bitcoin)'.

The idea coming from the new data sets are that the 'confusion' which is 'dominating the USAPop' over the 'political process' will induce a sense of 'real panic' in the 'investment community (and especially the speculative side of that community)' such that 'dollar exchanges' and 'dollar denominated debts' and

'dollar denominated trade deals' become 'unstable' over the course of just a very few months. This is indicated to further 'deprive (the) just-in-time supply system of goods (and credit sources)'.

The data sets are increasingly showing that what would have been considered to be 'radical thoughts' if ever allowed to be expressed on mainstream-propaganda press, will soon (in 2017) be coming to a 'teevee screen' across USAPop as the 'media liberation' begins just as the 'breakdown' of the 'dollar' reaches the 'fatal stage', thus forecast to 'incite calls for the end of the Federal Reserve'. The language is forecast to be much more 'violent' the further into 2017 with such sentiments as 'fry the bastards in the oil melted from the fat of politicians' more or less reaching the emotional tone forecast to emerge around the idea of 'central banksters' in general and the 'Federal Reserve structure' in particular. As an interesting side note, the data is showing a huge 'surge' in the 'popularity' of such notables as 'Max Keiser' due to the coincident 'timing' of 'recent events', and 'consistent message'. The 'spread of Max' throughout the USAPop as a 'new voice (of the) populace' is a very good TM for the next very large level of developments (i.e. 'leg down') in the fortunes of the 'losers' of the 'confusion selection' here in USAPop. Most of the 'fame and glory' part of the forecast involving Max Keiser shows up in modelspace as it is progressed across 2017 and into 2018. It appears that 'officialdom' will "meet it's Max" in early 2017. Max wins. The 'repercussions' of the 'Max(imum) encounter' for both parties will continue to 'echo', according to the data accretion patterns, well into 2020.

Note that bitcoin is discussed in other sections below.

The Markets entity has gained new growth within sets that are showing that the 'Federal Reserve' is to 'hit (a) deflationary wall' which will be the 'Chinese Great Wall' of 'forced devaluation'. This is showing as causing a 'deflationary effect' that will produce a 'rapid 60% reduction' in purchasing power of the failing US dollar. This is indicated to develop NOT from 'currency versus currency' valuation, but rather from 'dollar against (items/commodities/goods)'. These sets appear as modelspace is advanced into the end of November. These sets continue to grow over December and into the new year. The data sets are showing that there is a very large 'shift' in the 'relationships between currencies' that will be 'causing' a 'new social order' to begin to become 'visible' in the 'propaganda press'.

The data sets are showing that the 'monetary system' is being 'pumped up' through 'back channels' with 'deliberate efforts' on the part of the 'monetary masters' to 'fund criminal activities'. The data sets suggest that this is yet another way that they are trying to 'get money circulating'. Not to say that they are going to 'buy drugs' (more than they do already), but rather that they are going to 'fund' channels that they know to be 'criminal' in nature. The idea is 'money velocity at any cost by any means whatsoever' will be the 'new mantra' that will overtake the 'Federal Reserve Bank' as it discovers it is 'not part of the federal government, has no reserves, and is not a bank' with the '(social) impact crash' that occurs immediately following the 'USA elections'.

The data sets are clarifying the situation described above. It is the apparent 'pinching off' of the various 'funding tentacles of the octopus' that will necessitate the 'attempt at a revival'. This 'revival attempt' on the part of the 'monetary masters' is described as being only partially 'successful'.

Montsatan crash? Data suggests that 'GMO productions' are going to encounter a 'giant liability' that is described as 'bankrupting' the 'future (for) GMO'. This 'liability' is going to arise from the (currently unfolding) 'dollar crisis-crash-cade' in such a manner that 'corporate death' comes so swiftly that 'shorting' and other 'speculative participation' will be but a 'momentary window' as the 'giant falls (face

first) flat' in 'mere weeks'. The 'liability' is cross linked over to the SpaceGoatFarts entity, and terminates in 'officially denied' sub set. The data has sets including 'back fire', and 'taken off leash'. Other sets include language that suggests that a 'feedback loop' is going to become 'unusable' in such a way as to 'prompt' or 'create' problems that are described as 'internal to the process'. It would *seem to be a situation in which their very 'tools' will 'turn against them', and 'contaminate' their 'production process' such that 'locations' have to be 'isolated' and then 'quarantined' in a 'desperate attempt' to 'short circuit bankruptcy'.

The data sets are continuing to bring up 'panic' in the 'central banks (officialdom)' view of the 'markets' for '2017'. These data is forecasting that the 'markets' will be 'exhibiting bizarre behavior' so the 'panic' will be having some impacts on the 'trading activities', however, the 'panic' does not show up within the data sets until later in November, post election. The data sets are forecasting that the 'confusion' of the 'political fracturing' is going to 'create' a 'dumping effect' within both the 'international community (of traders)' and within what can be called 'Wall Street Establishment'. Note that this latter is really run by a number of software programs as 'trading algos' that will be the actual 'push on the pendulum' that causes the 'panic' to be 'spreading' throughout the 'markets'. There are a large number of sets new to support under the idea of a 'compounding (of the) wave' as the 'selling of falling assets' gets to the levels set by 'monitoring algorithms'. The idea is coming out that the 'software trading' will be somehow 'freaked out' by the 'central banks activities', and will, as forecast a number of ALTA reports back, start to 'liquidate' against a 'suddenly rising dollar'. Further the data is forecasting that the 'dollar' will 'rise so fast' as to 'require chinese central authorities' to turn to 'devaluations' very rapidly. This will further 'exacerbate' the 'dumping trend (of ancillary treasury notes)'.

The new processing is producing linguistic structures for Bitcoin that provide details for BTC as it is described as 'climbing' into 'power position'. This climbing is further described as 'upscale by tens (10s)', which in past interpretations for ALTA reports has been seen to mean orders of (multiply by 10) magnitudes. Past interpretations have had successful manifestations as in when both 'gold' and 'silver' went upscale by 10s from their pricing in 2001. The interpretation for the 'BTC going upscale by tens' within this processing run is reinforced by cross links referencing the 'rush of RMB (yuan)' into 'BTC' as well as other internal cross links within Markets entity that also point to 'multiplication (of) BTC price' in both 'dollars and yuan'. These sets are within the supporting chain of data for '\$13,000 BTC' as well as '80808 yuan (to the BTC)'. These sets are also both within the larger group of supporting sets for 'hyperinflation'. As these sets are still growing in new support, as well as gaining new cross links, it may be that these prices for BTC will be manifesting in the 'hyperinflation bubble fest of 2017'.

The data sets are indicating that the USAPop 'healthcare insurance implosion' is going to 'jump (on the back)' of the 'global nightmare' of 'bank lock ups' and 'magnify the credit freeze' within the USAPop economy. This is, as may be expected, showing many impacts forecast for the 'global (non USA) economy', and very few of the details may be characterized as 'good'. Most of the detail sets are showing the 'giant (wave) of (goods) orders cancellations', and a 'scramble' to 'recover (already sent goods)', 'stop shipments', 'attempt to collect money', and 'resell (elsewhere) goods (made and packaged)' for USAPop delivery. The data sets are growing around a brief, but 'enjoyable' phenomenon that will 'spend several months' in Russia (in Spring 2017) as the 'global merchants' try to 'sell discounted merchandise (from the credit freeze cancellations) to the 'delighted' RussiaPop. This is indicated to be such a 'big phenomenon' that the 'government' will be 'dragged into' the process at

several levels as it tries to cope with a virtual 'flood' of 'inexpensive (cheap/discounted) goods' from India and China. Once the global markets get wind of the new 'openings (for business)' being created by the 'Russia government' in 2017, the data sets show that South America, and Africa also 'join in' on what will mature as a 'russo centric design shift' for 'popular global items'.

The data sets are indicating that the USAPop initiated 'scrounging' for 'gold' and 'silver' will be picking up globally as 'precious metals' start becoming 'known' to the 'younger populations' of the 'western world'. These new waves of 'awareness' are indicated to come at the expense of the 'fiat currencies' with gold showing a per ounce price after a specific set of temporal markers place it at 'over '\$7900' and 'climbing'. These temporal markers were more or less coincident with the \$13000 to BTC data in recent reports, however the number sets are shifting forward such that the \$7900 is now appearing at the far end of the Shorter Term data sets. This implies a manifestation sometime in early 2017, HOWEVER please note the bulk of the data for that price is still within the near side of the longer term sets (see end of this report for definitions and descriptions of the process and terms).

The 'scrounging for gold' language in USAPop begins in late November 2016, as the emotional sums around 'gold and silver' form new highs from incoming broadening supporting language. Stated another way, the pyramid of supporting sets for 'gold' and 'silver' grow larger from the bottom, and these new sets are emotionally hotter over all such that the whole of the pyramid heats up at the level of the emotional sums. The data is forecasting both the 'election confusion' within USAPop internally to USAPop as well as that same 'confused state' of USAPop and its effect on people outside of USAPop.

Further problems for the 'outside USA continent dollar based world' are showing as springing up during Winter as the 'Federal Reserve Bank' and it's systems become 'visibly incapable' of 'coping with emerging events'. This is showing up within the cross links from USAPop over to Markets entity in both directions as being a 'pivotal point' in the 'failure of (a) complex control system'. The idea coming through the detail layers is that some 'markets events' in late November will 'hint (to far seeing minds)' of a 'potential trade (bet)' in December or later, and then the 'hungry speculator community', already 'reeling from shocks' will be 'piling onto' the 'formerly hidden position' such that 'emergency meetings' of the 'Federal Reserve power structure' will have to be 'called secretly'. However, it will be seen that 'movements betray', and word will 'leak out' and the 'Federal Reserve power structure' will be 'thrown into disarray' as their 'options narrow to nothing'. This period is described as being the 'ballooning (of) hyperinflation' and the 'open repudiation (of the) dollar' by 'foreign holders (en masse)'.

While there will be parts of the 'gold and silver rush (global)' that will be 'sea based' the 'new frontier' for 'oceans' is showing up in markets as being 'minerals and energy'. These are both not good signs as they have each separately displaced 'fishing' as a 'primary commercial objective' within our language sets. Just viewing the data shift over time, it is as though humans are realizing that mostly the 'ocean life has been eaten', and now we are (at least the corporations) turning our attention to 'minerals' and 'energy harvest'. These sets are cross linked over to the 'food crisis' of Winter 2016/2017

SpaceGoatFarts

Little time was used on these data sets even though growth within the sets has been large, the more demanding USAPop and Markets data was too voluminous to be able to work the SpaceGoatFarts entity to its usual level for this report.

There are new growth levels across almost all the SpaceGoatFarts directly held sets for 'oceans'. These include forecasts of 'ocean currents changing' due to 'earth expansion effects' such as the 'oceanic plains' becoming 'larger', and in some cases, 'splitting'. Other reasons for 'current changes' will be the 'side effects' of 'ocean floor expansion' such as 'coastal outlines (being) altered' by both 'rising lands' and 'separating (existing land features)'. Yet further 'current changes' will be due to 'atmosphere alterations' both forecast in ALTA reports over the years as well as previously discussed in the form of 'jet stream walk-about episodes'. In these new sets in SpaceGoatFarts, we get a glimpse of the 'energy transfer' part of the 'planetary expansion process'. This will include a lot of 'new energy pathways (currents) in the 'atmosphere' that will also 'transfer heat' into the 'oceans' in different places and at different intensities than in earth's past.

Please bear in mind, while we are currently in a very active phase of planetary expansion throughout our solar system, and while in that sense we are going through a predictable cycle of activities, each such planetary expansion cycle takes us into entirely new realms of expression here on earth. One such example is the planetary expansion that made gravity just that little-bit-too-much heavier such that none of the tall dinosaurs could any longer pump blood to their already small brains and they died en masse. Such may happen to giraffes this time around. They are at the very top limit of what is possible in terms of brains, blood pumping, and current gravity levels. Each planetary expansion cycle, as with all cycles, is traumatic in the beginning, then as humans get used to things, we discover just what really happened while we were absorbed in the trauma. We are just getting into the early stages of the 'trauma' part of this cycle according to the new SpaceGoatFarts entity data.

Other new sets in the SpaceGoatFarts entity are accruing to the older sets of 'farmers with shotguns' who will be 'shooting at ufos and space aliens' in the night. These sets are particularly focused on an upcoming 'sighting' that will apparently 'piss off' a farmer in the middle of the night in such a manner that 'his stand (against the space aliens)' becomes 'legend'. This is forecast to lead to the 'young man' becoming more than just a 'local hero' though that will also be in his path.

Other UFO related sets include some within the 'core peoples' sets from previous ALTA reports which are now aggregated under PopWar. In these new sets, a number of cross links over to the SpaceGoatFarts entity are terminating in sets that are describing 'UFO pictures' which is to say, 'pictures and videos of UFOs' that will be 'captured inadvertently and frequently unknowingly' by the 'drones' being used in PopWar for spying. The 'UFO' being 'drone spotted' is forecast to become its own category on video posting sites over 2017. Hmmm....maybe more UFO tourists due to the uptick of crazy behavior from the humans.

Conclusion: Chrysalis begins with dynamic motion

Almost all of the dynamic or body-motion arts of humans will bring the long time practitioner to a great epiphany regarding matter and movement here in universe, to wit: it is easy to shift the direction of something already moving. Thus the gymnast and the person stocking the products on your shelves as part of your personal contact to the global just-in-time supply system are both aware that once in motion, directional control just needs small corrections to achieve the desired result.

Humanity, especially that part of it living under the tyranny of the Federal Reserve dollar empire, is being set in motion. This motion is going to affect all of the 'western banking dominated world' as

'money becomes redefined' and along with it, 'character and morals' will be 'exposed for all to examine'.

In these most chaotic of years ahead, remember that in the worst of the swirling madness around you, things will be at their most dynamic, and in that level of intense motion, and emotion, it takes but the most gentle pressure, so light as to be hardly felt, to effect a very large change in direction of manifesting events.

USAPop is going to 'go inside' in a manner not seen on this planet since the 1830's. Once the Whig party morphed into the Republicans in the War between the States in the 1860s, USAPop was falling under the control of the globalist Powers That Be. The brief respites of the 'anti-Masonic Party' of the late 1800s, and the 1918 collapse of Globalism via League of Nations were minor recesses in the schooling of USAPop by their 'internationalist masters'. Now our data sets are forecasting that USAPop is going to 'cocoon itself' for a number of years as the 'dollar death' process takes place. It will be seen in hindsight to have taken just about 10/ten years for USAPop to 'end its chrysalis' and to 'emerge' as part of the 'new world(s) population'.

Data shows it to be a very very challenging and worthwhile ten years ahead.

Post Scriptum:

A brief lesson is being presented to us by Universe. It is only near sighted humans who label DNA (or anything in Universe) as 'junk'. Universe has a use for all its creations, whether we grok this or not. When you hear such statements as 'junk DNA', remember to think, that is a mind announcing its own limitations. It is saying "I'm too stupid to grasp this, and too arrogant to admit my ignorance."

The data has forecast that you will be hearing statements to the effect that "it is only junk (that opinion, or viewpoint)" expressed about 'woo-woo'. Bear in mind that Universe provided woo-woo *precisely* as the required lubricant for the downfall of the people who will be denigrating 'woo-woo'.

A brief (future) funny story. Recently I spoke with Greg Hunter on video and became famous outside the woo-woo world. This led to many people contacting me, some of whom were unfamiliar with my nature, most of those now know that I bite. The funny part is this young kid who contacted me. I spoke with him as he was a very rare thing, an American who speaks Ukranian Russian. An American of his age who speaks any other language than American is rare, but factor in Ukranian Russian, and you get a polish to 'rare'. So we talked for a bit. He was seeking advice about 'real estate' and, at its core, how to prosper in real estate. He was thinking of choosing to try a franchise approach in the Ukraine. I asked a few questions, then offered responses specific to his queries, but due to his being fluent in paruski, I went further, and, feeling like the 'step-uncle' in the party scene at the beginning of the movie The Graduate, I offered to tell him the path to riches, and to do so in one word, and that it was related to real estate.

As may be expected, he was interested.

I went on to inform him that I was quite confident he would not believe me, but even so, I was quite certain of the information, and was merely waiting for some young entrepreneurial minded young person to capitalize on this knowledge.

Of course, I told him the single word that could determine his success, at least if he took that path, and

as I had presumed, he blew it off...though mostly out of incredulity (so there is a hope he may reconsider over time, and in enough time). But that is the way of it, karma determines how we are challenged in life, and what circumstances will present themselves to reveal our characters for our education. And so it goes. As it will over these next few years of first what we will come to call 'The years of Struggle' here in USAPop, then the 'Reconciliation' to ourselves as a people and to the rest of the world, as a people in emergence.

Oh, that word he did not believe, the one word to success in real estate in the upcoming unfolding of this century.....'warehouses'.

About Predictive Linguistics and our methods

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

As an example, the word 'prophecy' may be read up by our software at a sports oriented forum. In that case, perhaps, due to the emotional sums around the context, and the emotional values of the word itself within the lexicon, it would be put into the contextual 'bin' within the database as a 'detail word'. Note that the context of the use of the word in the sports forum is lost in the process and is of no use to us in these circumstances. What occurs is that the word is picked up as being atypical in its context, therefore of high potential 'leakage of future' value. The way this works is that most sports forum language about future events would be statistically more likely to use words such as 'bet' as in 'I bet this XXX will be outcome', or 'I predict', or 'I think that XXX will happen'. So it is the context plus emotional values plus rarity of use within the context that flags words for inclusion in the detail level of the data base. Further, it is worth noting that most detail level words are encountered in our processing mere days before their appearance. Within the IM (immediacy data) primarily, and then within ST (shorter term) data next. But a preponderance are discovered within the IM time period. Perhaps an artifact of our processing, if so, one not explored due to lack of time (cosmic joke noted).

Words are linked by their array values back to the lexicon using our set theory model (see below), and the language used within the interpretation (detail words excepted) derives from the lexicon and its links to the changing nature of contexts as they are represented within our model.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **ALTA report** is an interpretation of the **asymmetric trends** that are occurring even this instant as

millions of humans are typing billions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

In our discussions, the interpretation is provided in a nested, set theory (fuzzy logic) pattern.

Definitions:

Aspects/Attributes are: collections of data that are within our broader linguistic structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

Entities are: the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

Lexicon is: at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

composed of: **emotional qualifiers** which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

Spyders are: Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

List of entities explored in this report:

GlobalPop

The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

USAPop (and any other nation state/territorial reference)

All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

Markets

The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

Terra

The Terra entity is the master set for all structures that relate to the planet, and the physical environment of planet earth. This master set frequently and increasingly has

extensive cross links to the SpaceGoatFarts entity.

SpaceGoatFarts

This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

Data Types

IM = Immediacy data with forecasting effectiveness from 3 days to the end of the third week. Error range is 4 weeks.

ST = Shorter Term data with forecasting effectiveness from the 4th week out through and inclusive the end of the 3rd month (from date of interpretation). Error range = 4 months.

LT = Longer Term data with forecasting effectiveness from the end of the 3rd month out through and inclusive of the end of the 19th month. Error range = 19 months.

Terms employed:

Cross links – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

Linguistic structure – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

Meta Data Layer – in modelspace, when a meme appears directly held in numerous sets, at the same level of support, it is labeled as a 'meta data layer'. These 'layers' can be thought of as a common linguistic structure that forms with differing supporting sets in the various entities. For clarity, a meme in Terra entity would not have the same supporting sets as that same meme in the GlobalPop entity, but both would be part of the larger meta data layer that the meme reveals.

Modelspace – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

MOM – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

Set – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

Temporal Echo – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

TM = Temporal Marker, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.
