## **This future forecasting stuff can seem overwhelming...**

Even to me, and even after all these years examining data and creating reports. So if it gets to you, or you have questions about the reports, my best contact email for such will be [clif@halfpasthuman.com](mailto:clif@halfpasthuman.com). For background on how these reports are created, there is a primer in the last 8/eight pages of this report. If your questions about preparation are not answered after reading these, then send an email and I will get back to you when I am able to get through the daily work (there is a lot of it).

## ***Your ALTA report changes...***

If you are a reader of the ALTA reports, you will notice our new format. This new look is designed to eliminate some of the barriers for our information by reducing the complexity of the presentation.

## ***Your world changes...***

Your planet is taking off! In more ways than one; both your world of humanity, and your planet, the dirt under your feet, are both taking off. First the planet. The earth is getting bigger, growing from the inside. More matter is being created and clumped around our plasma core deep in the planet, and as a result earth is bulking up.

Because it is expanding, it is moving away from the sun in the spiral as it is being carried along in our Sun's tail. It is an issue of relative gravitational pulls. The data sets are showing that you are going to be feeling that movement soon. We get indications that earthquakes will be waking you up, and shaking you up over these next months so frequently that you are going to want to call up someone and say 'enough!'. But feelings aside, the data are showing that it is not going to stop for years as earth has to adjust to the new matter is forced into it by the energy core. Not only does the energy expansion process make the planet bigger with all sorts of ramifications from earthquakes to gravity, it also makes the whole of the planet cooler. The expansion process is a large participating factor in the planetary cooling.

Your feet will be appreciating the stability that does seem to come along in Fall, though it is a sort of stability of chaos. That is to say that the media of all kinds including the alternative and msm propaganda press whores will all be chattering non stop about all the incredible things that the planet is choosing to do that day.

These chattering days will include storms, floods, winds causing all kinds of problems including moving big stuff like boats and trucks and other things like whole schools to places where they would not normally go if humans had been involved. In one case we have details indicating a new hero will be coming out of the 'wreckage' of a 'small town' as he will be the 'saving' of many many people in his actions both during and after the winds hit. This set would seem to indicate that we are looking at a tornado touch down. Other sets that may be referencing the same situation, or not, meaning a wider meme are showing a lot of 'tractor' words with saving people from mass amounts of wind driven debris.

This episode may actually belong in ChinaPop with the tornado in USAPop, but the immediacy data is not so clear as to be able to separate. So this may be two hero's, one with a tractor, or just two 'views' of the same situation. Nonetheless data suggests wide spread reporting on the story with a decent multiple week following in media.

Pink avocados, blue wheat, safety-orange potatoes with green stripes and more are coming to your planet. Some of these are showing up as being 'natural mutations' or 'evolutions', while others are showing up as 'escapees' from 'DIY gene-tool labs'. Though both the natural and the human-made mutations are mainly in the longer term sets, there are also non-silk worms, that nonetheless are forecast to be 'producing fibers' as well as 'base chemicals (as semi-fluids)'. See SpaceGoatFarts entity area for more on this subject.

We have indications that 'halo winds' (whatever those may be) will be over Canada and Alaska with such ferocity as to freak out people in both areas. These 'halo winds' are conjunct the volcano and volcano under the ocean sets. No indication as to why.

The data growth for earthquakes has certainly settled down, but there are rather disturbing sets for very deep cracks forming that are destined to be the 'continent splitting cracks' of our previous reports. These new supporting sets include geographic references for both north, and south America as well as Japan, and China. In the case of Japan, the data shows that the southern several islands are at risk of 'shifts' as large 'splits' in the island appear. Both Japan and China have data sets relating the 'splitting' of the land to 'water intrusion'. The description are for new 'bays' and 'inlets' to form as a result of the 'underlying lands' being 'separated'. These are primarily longer term values pointing to a 2017 occurrence. It is noteworthy that our data still maintains a large earthquake will traverse north America diagonally from the Pacific Northwest to the Gulf States some time in summer of 2017. These sets have been in the data since 2010.

Yet more language is showing up for 'pockets' of 'harsh winter' as an 'overnight occurrence'. In a few of these cases we have geographic indicators that would seem to suggest that people in equatorial jungles will be losing their minds as they 'experience cold', and 'snow', and 'ice from the sky' for the first time ever. Other areas more used to snow are still going to be filled with people giving voice to 'what the hell' kind of statements as snow blankets large areas months early. Some areas such as Japan are showing as being 'snowed in' both very early, and for a very long time. The cold is showing as being described as 'hyper-cold', and 'ice age cold' in many languages by early January 2017.

Of course, here on earth, the scientists will be perceiving these issues as being caused by the sun disease which relates to sun spots and is being discussed currently in academia. What they are not including will be the 'distance factor' of earth, and all the other planets excepting Mars, 'sliding backward' away from the sun. This is indicated to cause some huge levels of confusion that will, for a number of years, provide a boost for the 'flat earth' people. This will be due to the sun being measurably 'smaller' than in time past. This change in apparent visual size of the sun is also forecast to be temporally linked to the increasing solar radiation and crop damage. Also the moon will appear larger by contrast as the sun seemingly shrinks.

Many other strange or uncommon earth effects are popping up in the data sets for these next few months. Looking at modelspace as we progress through to Spring of 2017, the data is saying we are in

for a very very busy time of 'new earth events/changes/happenings'. In the case of the 'happenings', the data is forecasting that some of these earth expansion events will be 'one-off', or 'not repeated'.

A group of cross links from the Terra entity over to the GlobalPop entity are forecasting that the 'cracks' in the 'sea floor' (likely in the Mediterranean) will create a lot of global chatter about earth expansion at a level that ThePowersThatBe will find to be 'disconcerting'. This last area has lots of cross links over to ThePowersThatBe entity where terminating sets include 'fear' and 'anxiety'.

Other sets around 'fear and anxiety' are associated with yet another 'cruise ship incident'. In these sets a 'local hero' will emerge who will leading the 'rescue crews' after an 'expedition' goes 'really wrong'. The data would seem to be suggesting that our 'dark haired', 'muscular', 'diver', will be able to 'get them out' where others will fail. The 'them' appear to be a group of tourists off the cruise ship, and where the 'out' is located is, at this point, unqualified other than to say that the 'tourists' get on the 'other side' of a 'narrow opening' likely in a large rock wall, and the waters are coming in, and for some reason they are unable to get back through the way they found themselves there. Data further goes on to show that our local hero repeatedly has to go 'pluck people' at some great risk to himself as well as them, but does it with aplomb, and skill. Because of this incident we will be seeing our local hero do well for himself as fame will suit him.

As we go forward into this new century and on this new planet, there are also going to be new phenomena on that planet. One of these is this new form of lightning that we are now learning is appearing across the planet. This new form of lightning is very dangerous as it has demonstrated by killing large herds of animals all at once from a 'single bolt'. The data has a very robust set that describes this lightning as 'threads' that are all connected to a 'single pole', and these 'threads' will be 'sprinting across landscape' to 'collect (into a) rope' before turning into a lightning bolt. So the way it kills large groups all at once is that each of these 'threads' are electrical 'filaments' that are going to be 'dragged across landscape', and as they are dragged across you, you die as you will ground these threads out...and it will still go on to collect into a rope for the actual lightning bolt discharge. These phenomenon are described as being everywhere in a few years and very damaging. Many new words are forecast to be coming from this, and other new physical phenomenon over these next few years.

There are sets that hint of good video of the lightning as one will occur during a 'freezing fog' that will be caught on phone. These will reveal something similar to the description above, and present us with the first of the new words which are forecast to be attached to the video, likely in the title. In some sets the description is more like 'electric jellyfish tentacles'.

Other aspects of the 'new lightning' are going to be revealed, according to the data forecasts, when we get an instance of this 'at sea'. Apparently there is going to be some incredible level of damage that will be totally 'misunderstood' and 'badly reported', BUT those of us paying attention should get enough clues that this is an instance of the 'new lightning' that has 'left burn marks in steel', and 'welded (melted) aluminum'.

More terrestrial problems are showing up for 'buildings' as well as all manner of ports. Again it is more language going to 'planetary stretching' with the attendant 'separation' of matter below streets that is now being described as 'resulting in a plague of smallish sinkholes' around the planet, at the same time as we see the 'blows' beginning where 'sea water' and/or lake water is going to end up miles from where it should be, and we will get to see video of the 'water shooting up' out of the ground in the middle of a

dry vast plain.

The buildings and their supporting infrastructure are described as being our biggest indicator of a new phase of expansion of the planet as the 'minor sinkholes' start gobbling up traffic all over the planet (excepting parts of russia/china), we will also be getting video and other reports of building infrastructure breaking down in spectacular fashion. Some of these are describing miles of piping being 'twisted' such that it 'crushes in (on itself)'. This and other 'below ground strangeness' is described as being a new and growing area of interest as we get into this next phase of the expansion process. The data has lots of videos showing up specializing in tracking down and showing these underground oddities.

A larger than usual percentage of the data within the Terra entity area has 'underground' as a terminating value. These include a number of incidents that will become visible over the rest of 2016 with the data sets forecasting that a few of these will be 'popping up' very shortly. The totality of the sets involving 'underground' as a leading descriptor would seem to be forecasting the expansion of the earth to be moving into the next phase. Unlike the last few centuries of compression symptoms at a planetary level, the data is now forecasting that expansion 'symptoms' will be affecting how humans live for a number of decades. These expansion symptoms will have some benefits in that volcanoes will slack off their visible input to things AFTER a 'big push event' over the rest of 2016 and into nearly September of 2017. At that point the data sets are suggesting that we will have passed (or be near to it) this current phase of 'peak volcanoes'.

Other effects of the concentration of 'underground' incidents include mentions of problems for 'deep ops' on several continents, including a near riot by employees at some government underground facilities in the very near future as their 'environment controls' go bad and they 'want out'.

The underground sets also include many many references to 'cave ins'. A curiously high number of the sets are cross linked over to some form of 'discovery' appearing as a result of 'new looks', or 'cracks', or 'views into' various formerly hidden underground spaces. Many of these will be defunct, but some not, to the great embarrassment of all concerned as 'secrets are revealed'.

## ***Your Global Population changes....***

Not only the general state of humanity changes, but the actual population of animals, plants, and insects around us undergoes a noticeable metamorphosis. Mutations, new species, new animals, and insect species that cause interactions with plants and minerals that then cause new forms of 'something we are not quite sure what it is' to appear. Some of these new 'plant/mineral/?' what-ever's are indicated to be discovered this Fall and Winter as we will all be reacting to rather extreme conditions which will in turn be associated with these 'new life forms'. There is not a direct causal link at the level of the weather, but the data sets are seemingly suggesting that perhaps the 'unknown energies from space' are a potential 'cause'. Some of these new critters will be providing just 'what the doctor ordered' for humans in a very serendipitous synchronization of needs and resources.

There are still growing supporting sets for the 'mummy' ship wreck, along with 'power ships' that will be 'running conduit to (an) island' in support of the 'recovery'. There are new sets that continue to describe 'Caribbean islands' more than any other location. Further growth also shows up in many of the sets for the 'powers that be' who will be 'getting all lathered up' over the 'discovery' and 'exploration'.

There are new growth for the sets for 'underwater caves' and 'underwater (dry) areas' and 'underwater buildings'. These would seem to be serendipitous 'discoveries' around the 'ship wreck' that was discussed in previous ALTA reports. The data sets are bringing in both short term and long term data that is piling up in areas that include 'tunnels', and 'cache \*(of what is not known)', and 'ancient', and 'energy'. There are sets that have support from 'iron dome', and 'metallic looking', and 'dark/faded/dim reflections', as well as a number of other descriptors which would seem to be painting a picture of a very large diving expedition that will be attempted to be conducted without notoriety, without success. These sets are still gaining support for the idea that ThePowersThatBe get very 'lathered up' about the discovery, and many economic and social changes result for the area due to the 'shift' of the focus of the 'power people (of the world)'. These sets are temporally linked to October of 2016 with several emotional tone spikes throughout the Fall and Winter and into Spring of 2017. These spikes are indicative of new surges of energy, and money being put into the 'recovery'. Note that there is more on this in previous few ALTA reports.

There are a very large number of cross links from the greater population areas in modelspace over to the Markets, and the Terra entity areas. The Markets entity cross links are filling with support at an immediacy level, while the Terra entity is bringing in much more longer term view sets, though, there are immediacy level values showing that the GlobalPop is in the midst of transition between planets, and will be reeling under the impacts over these next few years.

Some of the larger of the cross link ropes in the GlobalPop to Markets entity connections are bringing in new and growing data sets for the idea of a 'generalized breakdown' of the 'USA centric trans-national trade agreements' as a 'platform'. The idea coming out of these sets is that the 'state of the Federal Reserve' and the 'federal government' within USAPop are going to be such that most of the 'other players' in the 'international trade agreements' game, will recognize that the USAPop is not going to be 'keeping on' with the program. The data sets are indicating that 'defection' after defection until there is just no-one left will be the fate of the various 'grand alliances' recently put forward by the dying dollar empire.

There are a number of new trends within the modelspace that are rising up out of USAPop as 'corporations' are in the data in a general way as the 'dollar squeeze', and 'credit freeze' cause real problems for large, 'debt ridden corporations'. The 'problem' language is showing that there are going to be both 'swift' and 'shocking' meetings at the 'highest government levels' that will be centered on 'keeping (the) behemoths alive'. The data sets at the point of the 'meetings stampede' will be in response to a number of these very large debt holders reacting to what the data is describing as a 'split' in the 'interest rates'. This 'split' is not well defined in the data sets, but basically comes down to the 'officialdom interest rate' which is mostly negative, and the 'real interest rate' which is showing in the data sets as being near 4% and that occurring so 'rapidly' as to cause 'pissed pants' in 'board rooms' across USAPop.

The 'sudden rate upheaval' is discussed in Markets in the first section, however there are many sets that are including 'social upheaval' at so many levels that are tied to the 'sudden rate up-ending' that this bears some discussion in GlobalPop as well. In the central sets for the 'sudden rate upheaval' are focused on a 'small country' that is 'trying a dangerous game' that will very rapidly 'escalate out of control' across a '(western) global financial system'.

The 'cross over' of the 'escalation' of 'derivatives' into the social shifts of the time is popping up in our data sets as the main cause for 'social distress' that will ripple outward from the 'centers of New York and London'. The 'ripples' are showing up in the data sets as spiraling out from these centers over the course of several weeks. Yes, there is an initial wave of financial destruction, but in the main, the vast populations of our planet are NOT instantly affected. So the data sets are forecasting that within the western part of the world, the cross over from financial system into social systems happens very rapidly, unlike most of the rest of the world where it is really a 'trickle down' effect.

The social impacts in the western parts of GlobalPop are discussed in their individual sections, however it is worth noting that a broad brush view of these next few years of GlobalPop show it as a heaving mass of change as the older financial world really implodes in the sense of collapsing inward. In other parts of the data from GlobalPop are showing a 'growing into' the 'vacuum' created by the failing old paper debt slave system. These sets are indicating that very large social changes will emerge across continents, some very rapidly, changing things from coast to coast in mere weeks, while others will be rolling through the populations over many decades.

Yet more 'ocean' references, many about 'sub sea' activities.

Specifically we have a 'sub sea' reference for 'righting this ship', and we have a 'surface episode' when a 'very large ship' will be 'righted' and 'danger averted'....however, the whole thing will go bad quickly as the data is forecasting the 'ship' to 'come untethered', only to set off on a 'walk-about'. This is showing as creating a 'public danger', induce some 'population shifts', and then 'major damage claims' as it will become evident that the new 'resting place' is going to 'take years' to get the 'vessel righted' and 'removed'. The data hints that the 'local population' will be inconvenienced significantly as the 'cargo' has to be 'transferred'. That alone is apparently going to take some considerable time, perhaps a few years.

Sun disease is showing up in many sets in our work. The phrase in this area is referring to the actual effect of the 'sun rays' on humans, animals, and plants. The 'disease' part is gaining a lot of new supporting sets that include 'vomiting', and 'eyes damaged', and 'dehydration' as well as many other words relating to the symptoms of the sun disease.

The 'sun disease' is not the only form of disease that is going to be occupying us over Fall and into Winter. There are very large areas of growth in the GlobalPop sets that provide hints for both 'epidemics', and 'attempts (to sell) pandemics'.

Further there are a very large number of new sets that continue to grow and gain new values for the 'spread of the time disease'. This is very likely directed at the 'mandela effect'. There are enough sets within the GlobalPop entity for this 'phenomenon' to pursue it at this time. It had been in the SpaceGoatFarts entity in years previous, as an 'unknown', and 'unlabeled' form of a 'time perception phenomenon'. We had hints of this in various forms of the 'time leaks' from 'laboratories' over the years of the ALTA reports. The data sets are now indicating by their growth patterns that the 'phenomenon' has or is or will soon be 'mainstream' in that it will be viral to the point that the mainstream propaganda press in the western dollar empire will be 'forced to react'. The data sets are forecasting that there is going to be 'much revealed' from the 'secrets stashed' by the way, manner, style, and wording used by officialdom acting as minions for TPTB.

Apparently officialdom is wrapped in a trap of their own making. The 'mandela effect' is 'real' insofar

as their thinking is concerned and their media will be forced into a response by the 'rate of growth' of the meme.

The whole of the Mandela Effect issue is forecast as becoming ever so much more complicated for 'government' or 'officialdom' here in the western dollar empire when one of their own will use the 'Mandela effect' as an answer to 'why certain officialdom documents were no longer available on line'. This is described as being likely a 'flip response' by a 'minion under lots of pressure' on a 'public stage', but is also indicated to 'ignite a firestorm' within alternative press.

All of the above are but mere cousins to the main emotive trend showing in the data sets which is a 'burst of hyperinflation' in the USA dollar that is described as catching the world by surprise. It is showing up as a 'burst' that will somehow, 'be responded' to by the 'authorities' in such a manner as to 'slightly contain' the effects. However, this 'burst' is cross linked extensively over to our other big, new data set, the 'spending wall' set. This set is in GlobalPop, but will be discussed in more detail in USAPop as that will be the 'acute center' of the 'hyper inflating dollars' that cause a 'dollar consumer spending shock'.

### ***AustraliaCanadaIrelandNZPop***

The data sets for the 'outlying republics' of Australia, Canada, Ireland, New Zealand have these countries be 'pummeled' by the 'breaking away' of the 'interest rates' from their 'derivatives chains'. Now the data sets are gaining details including 'price shocks (due to rapid, walk-off-a pier rapid) commodity deflation', and yet more 'bribery scandals', and yet more 'economic damage in the tax rolls', and yet more 'environmental damage costs' will all be showing up over a very nasty few months from September through to May of 2017 as the 'dollar wobble' becomes a 'dollar stagger' which precedes the 'head long fall'. These countries are showing as having massive impacts to their in-border economies by the 'bashing' of the extra-national sources of 'derivatives' and 'interest rates'. These outlying republics are showing up as being barely ahead of the major centers of London and Washington DC in their 'sudden crashing'. The data sets are indicating that 'construction projects' of all sizes will be abandoned uncompleted as the problems in the money centers cut off funding flow like an axe through a fire hose.

The data sets are suggesting that a tie-in between Australia and the European banks is just about to 'break' which is going to be a 'temporally close event' such that within Australia the 'cause' for their 'deflationary event' will be blamed on the 'Italian banks'. This is not going to be beneficial to future Italian and Australia relations.

The data sets are indicating that some form of financial contagion will develop over the 3/3rd week in September that will 'flow' into October and will not even slow until mid November. The data sets are referencing large numbers of headlines about the 'destroyed' and 'devastated' financial system. There are forecasts for lots of headlines around 'broken unemployment system', and 'social services freezes', and 'governmental hiring freezes' and 'government shedding (of) functions' that are going to be nearly daily fare for October through well into next year.

The initial round of 'devastating developments' is showing as coinciding with the 'severe banking crisis' in Europe that appears to be 'on the streets' in the form of long lines at any place that will deliver cash

hit the media with force.

There are some bright spots within the 'outlying republics' economically. While the data shows that the 'economic hit' is first, and hardest here in the 'fringe countries' to the dying dollar empire, the data also shows economic bright spots forming up even in the midst of the worst of things mid 2017. So a real economic recovery does germinate as soon as the 'financial herbicides' are removed.

The data shows activities in north eastern Australian, far southern New Zealand, and south central Ireland will be 'drawing populations' due to 'economic dynamism' that will be evident starting about June of 2017. In the first case, new mineral discoveries due to earth expansion effects, in the other two it will be technologies that will be driving the changes, and in both cases, having to do with some aspect of 'electrical generation and delivery'.

CanadaPop is going to participate in the 'new electrics' meme at the 'build out' level. We still have data sets indicating yet more 'new minerals (flexible lattice alloys)' will be discovered in some serious amount in Canada. This will apparently happen late in the year given the descriptions of the terrain and the conditions. It may well be this year that the discovery is made, but no word of it will come out until mid next year, temporally coincident with some of the other 'new electrics' information that will be surfacing. It is the announcing of some of the other components of the 'new electrics' sets that are indicated to ignite CanadaPop with the 'new electrics' fire. The data would have the situation be almost comical in that the descriptors are of a fellow who will actually fall off his chair when he watches a video about the new electrics and realizes just what it was he found in his 'hole' (in the ground...thought it should be more specific).

## **ChinaPop**

ChinaPop has lots of new sets in supporting position for 'disturbance' as in 'social unrest'. These sets are now including several that are pointing toward 'disturbances' which will be as a result of 'bombing campaigns'. These 'campaigns of bombing death' are described as being a 'serial psycho killer', and a 'political copycat'. In both of these description sets are indications that the Chinese central authorities will be 'baffled' by the 'bombings' for a period of time as they will assume a 'geo-political motivation' that will not exist. It will be later when a 'police detective' gets 'connected' to the political power structure that the 'crimes' are solved. This will apparently make a great number of headlines within ChinaPop. Further the data shows that segments of ChinaPop will hold that the 'psycho serial killer' explanation is a 'false story' and thus start a conspiracy theory around the incidents of 2016.

Many other sets are cross linking the ChinaPop set over to the Markets set. The data sets are filling with several layers of new sets for 'dollar dumping'. These sets are not from the central Chinese authorities, but rather a part of the 'global spending wall' at the consumer level. These sets are forecasting that the general Chinese population that had dollar denominated accounts will be 'increasingly' concerned about the 'dollar stability'. Part of the impetus for this reaction by ChinaPop is indicated to be videos of 'instability' in USAPop that will be linked to a popular meme of 'USA meltdown'. This meme, and the attendant dollar dumping, (basically into the local Chinese economy), is showing as causing problems of economic disruption and disturbance for the central authorities.

Yet more data sets appearing on 'new electrics' coming out of ChinaPop including some battery technology that will be 'amazing' and 'staggering' as 'technical barriers' are indicated to be falling very

fast due to a rising technical positive feedback loop building around 'new tech' based on 'field manipulations'.

There are a large number of sets that are connecting the ChinaPop acquisition of gold and silver at a 'population level' to larger, global trends. The data is suggesting that ChinaPop will be 'pressuring' the statistics to the point that the 'mainstream reporting' in the 'western dollar empire' is going to be forced to 'report on news in ChinaPop' as so many of the 'wall street community' going into 'freak out mode' because of the chatter in China. The data sets are describing a curious sort of a scene in which there is a focus, a very sharp focus, on 'chinese street talk' within the 'wall street' media. The data is describing this situation of western media now doing lots and lots of man-in-street kind of stuff about China as a result of the rise of pressure on the western dollar empire by the occurrences in China. Much of this new data points toward the 'opening' of 'new markets' within China, as well as some announcements coming from Chinese central authorities.

ChinaPop is showing that the central authorities are going to be addressing the 'woo-woo problem'. This is described in the data as the 'people who are having unusual understandings of reality'. These sets are suggesting that an incident related to 'perceived time travel', OR also described as 'ghosts of time' will be 'swept through' ChinaPop in late Fall, or early Winter.

ChinaPop has very large new data sets for the central Chinese authorities to be 'seen' as 'turning the helm' internally by the 'young birds'. These 'young bird people' are 'officialdom watchers' who make it their business to analyze the movements, organic or steered, of ChinaPop. Our data is forecasting that there will be 'information' coming out that will point to central authorities having 'altered course'. Now, please note, the data sets are not suggesting that the hints of a small change in the course of the vast state of ChinaPop is breaking news, excepting two points of data via cross links are tied to this 'young birds' who will be 'signaling'. The 'movement' is described in the data as being over to 'THE preplanned course'. The data is stating in several different ways that the central authorities will have received some form of signal from the actions of the GlobalPop, that this September is their 'time to put Plan X-Prime into effect. The cross links that show this are within the larger GlobalPop entity and the Markets entity. Again, what makes this area so attention grabbing is that the Markets entity has the 'singing of the young birds song \*(about ChinaPop steering a new direction)' at the highest ever emotional value in our work for both intensity, and spread (propagation of the emotional tone under consideration). Second to the intensity value of Markets entity being pegged to MAX, the GlobalPop entity has the highest ever 'duration' value as well as a duplication of the Markets entity 'spread' value. So the take away is that the 'leaked news' (likely how it will be referred to here in the West) will have multiple generation impacts on GlobalPop. For the cognoscenti, think "Bretton Woods" and you will grasp its significance to us all. However, the data is not saying a repeat of the previous history, but rather is saying that it is 'time again' for that level of giant concern and multiple nation-states meddling about with the global economic order that will lead to major meetings, and then a new world emerging that we will all try to find a place within.

However, even the ChinaPop entity notes it 'is not easy' in going 'forward'. The data sets are suggesting that while the 'singing young birds' are correct, and the 'leak' of the information may well be planned in advance for its strategic value, the result is the same as if not, that is, ChinaPop will be leading the world this century and beyond, and they are moving to set their 'house in order'. As all ChinaPop knows, a strong house has a strong bank account and is able to exert influence where power fears to

display itself. Thus the world changes.

ChinaPop is indicated to get the coastal pounding of storms in similar manner to what is going to be hitting the north American eastern coast line. Both coasts are going to be receiving so many 'pop corn' storms that the level of interruption will impact the economies of the areas for months. Not only will the economic impacts come from the damage resulting, but also from the frequent shutdowns of everything as the population has to shelter to ride out yet another storm.

## **LondonPop**

The data sets are forecasting that the 'greater london area' is about to hit a few economic walls as part of the general 'dollar empire death' that are going to present some very interesting times for the local population. These sets are NOT about greater England, Scotland, or Wales, but rather the 'heavy bottom' of the UK centered around London economically if not geographically. LondonPop is indicated to get 'hard hit' by both sudden winter weather that locals will put out as WINTER as the shock of it enters their blood, and by a 'hard hit' as the 'economic reality' of the 'inwardly collapsing dollar empire' also brings out its own form of 'blood shocks'. The 'blood shocks' noted here include among others, the crashing, absolutely crashing of real estate prices as well as much if any hope for loans. In the data there are sets indicating that local bookies and other 'reputable geezas' will become defacto 'funding sources' for large subsections of various city enclaves as the 'officialdom' funding flows drop to nearly nil. Other ramifications from this appear to be a twisted form of internal to UK hyperinflation as well as dying money supply. One would think these are not compatible, but the data sets have repeated sets of both so it is being reported this way. The data has the 'officialdom sources' of currency being in 'choke mode', yet somehow 'hyperinflation sets off'. However it may work out, the 'political' follow-on is indicated to 'upend' the whole of 'British' society and replace many in power now with a different sort of criminal entirely. Consequences not showing. Multiple year process for the political upheaval, but real power transfers to them with the money, and as currencies die off, other things become money yet again.

## **CentralAmericaPop**

There are a number of sets for the rising of a 'new social paradigm' from the southern part of Mexico and other areas within central America. This new paradigm is going to include a central focus on 'sound money' which will be 'silver coins', and they will also be using a new form of 'non violent demonstration' to effect social change. These are specifically NOT described as 'protests', and are rather a 'demonstration of [unknown]' that is 'totally new' to our planet according to the data sets. These sets are large and growing rapidly, and we have just over 19% immediacy data so we are approaching a manifestation threshold.

The data is labeling this new social movement as being an 'anti-nation anti-state'. Beyond that the language is seemingly contradictory mostly, and confusing mostly. This does happen when new things are showing up in humanity that will have to be labeled after they make their appearance. Much of the details terminate in 'unknown', and 'not yet labeled' sets. In spite of no real labels for the movement, we have many descriptor sets that are centering around 'discovery'.

The data sets are suggesting that this new social movement is going to 'shift (overnight)' politics for the region; threaten the existence of several countries as the 'political will' of the population moves away from their 'statist view'; cause a very visible shift to openly circulating silver coins as the only money used in the region; create a huge draw for people from both north and south; lead to an economic boom lasting generations; start a new tourism relationship with north and south america; and last create several new cities, including many coastal [unknown] but relates to habitation, maybe a new form of city structures? Without regard to the unknown components, we do have rising immediacy data so the appearance of this movement is within this year. And to their 'chinese connection' for 'silver as sound circulating money'.

## **SouthAfricaPop**

The data sets are suggesting that the proximity of South Africa to a key spot in the southern ocean is going to be making GlobalPop news. Previously forecast problems related to earth expansion events are indicated to be 'popping up' in South Africa. These will likely include some 'strange places for sea water', as well as 'odd debris off shore'.

Other sets favoring South Africa are 'space' focused. These are indicated to be 'attracting the attention' of a large group of 'very well funded chinese investors'. The data suggests that they are not trying to put stuff up in space, but have some other form of commercial interest in space that is best located in South Africa given the other alternatives.

South Africa would also seem to be a hot bed of some very large earth expansion events. These may result in a new volcano building in-country. Given the data sets it can't be determined yet whether this is an on land or sub sea volcano. The data describes it as spectacularly colorful.

Other major data sets are pointing towards a big economic 'bashing' as the currencies are beaten by the derivatives failures. This brings about a 'outlying areas/countries' correction in all commodities, EXCEPTIONS being the precious metals. Even diamonds are going to take a price beating over these next few years, but the data is forecasting that South Africa will be 'rebounding' from the "first" global depression (2016/2017) quite a bit faster than may be expected. This is showing as being due to the ChinaPop influence, plus a tightening of connections to India, and from the precious metals surge that takes place which erupts in several 'gold rushes' in South Africa, AND from a big connection to 'underseas mining' which will bring participation in the 'silver find' that will be found off the coast of Greece in some deep(er) waters. This is temporally coincident with a follow on find of 'silver' and 'other metals (no mention of gold in this set)' off the eastern coast of South Africa. These areas have longer term sets that are forecasting that the area of southern Africa will be a long term underseas mining operation, much of it led by South Africa.

## **SouthAmericaPop**

The new data sets for SouthAmericaPop continue to suggest a large wave of expats from Europe will be making the decision to move to South America over these next few months. This will be in spite of

the economic issues from the collapsing financial systems. The data is still growing for an 'industry' developing to facilitate the relocation of central Europeans to various countries in South America.

The data sets from both 2015 and 2014 had many areas in South America that were to be 'volcanoes active zones'. These sets still are growing, but for less active times for magma, and now for more 'ancillary' effects of volcanoes. These are going to include 'mud flows (lahars)', and 'new ravines' that will form from 'new weather' more than volcanic action. There are also sets for 'sink holes' and very large 'land mass subsidence' across South America. This last may not be 'visible' for a while as the areas described are huge, massive, bigger than whole countries sorts of sizes are being referenced. These areas are to become 'bowls' in the South American topology. Some of these 'bowls' will fill with water. Not flood, but 'fill'. The data is quite clear in showing that 'filling' will mean no recovery of the land surface, at least not this century. Maybe not this millennium.

As modelspace is moved through to December, the South America sets are gaining new values for 'political upheaval'. These sets are suggesting that Brazil will become a cauldron of political change while its neighbors will become the bastions of political stability. All of the political chaos sets are financial system inclusive. That is to say, there is 'economic malaise' and 'economic destruction' within the political upheaval sets as a continuing prompt or 'driving factor'. The idea is developing that the Established Political Powers of Brazil are entering a period where the global economic pressures on debt based, central bank issued currencies are so severe as to expose fraud by the restriction of the flow of bribe money. The result is that more corruption is exposed in a cyclic nature that just seems to keep making things worse. Everything that 'government' touches is exposed as corrupt to the point that the population becomes violently reactive to each new exposure with yet an 'explosive' episode of their own. Things do not go well while this is on-going.

The 'cycle of disappointing political change' is also going to be coincident with many changes to the Brazil landscape, and most remarkably, their coast line. The data sets are forecasting that some very large physical changes to Brazil over their Summer will include expansion of the coast by a number of miles as 'collapses' or 'cave-in events' on the coast create new bays, and inlets. What is showing up as being the emotional hook to these events is not the land form changes themselves, but rather a 'gold rush' that sets in when some strikingly large nuggets are discovered, most likely in mid 2017. There are many sets for a temporal linking of the South American gold rush, and the earthquakes with resultant damage in mid north America. There are some cross links from the USAPop and the earthquake damage to the emigration to South America to participate in the gold rush. The data shows that the gold discovery becomes something of a global 'draw' for adventurers as the conditions will not favor large corporate mining due to the exposure of the gold being due to the earthquake and its ongoing problems, as well as the 'revolutionary' changes in the nature of the local nation-states. Their new attitude toward outsiders in a corporation sense will be less than cordial.

## **USAPop**

New data sets are bringing up the idea that businesses all across the USAPop are going to be 'hitting a sales wall' as a number of conditions converge over Fall and Winter. As the economic crisis devolves into 'crunch time' and 'pain but no gain' time for consumers, the data is showing that 'businesses' of all kinds will be 'scrambling' to 'cover giant drop in sales'. There will be many exceptions that will be

standing out from the general 'gangrenous' business climate. Our data sets have details for restaurants with fewer people in them week over week, and day over day such that even the most highly sought after reservations are 'suddenly easily obtained'. Further, the data sets are showing a significant, almost 'crippling' drop in the 'pre-sales' end of all businesses. So think early sales of concert tickets, or any events local to you. These are showing up as being down over 35% in attendance from last year and continuing to drop. Further the data is presenting the idea that you and your friends will be changing nearly life long habits about your 'leisure time'. These habits will include dropping all but 'last minute' or 'in the now' decisions as the 'money and infrastructure is not there'.

These data sets are describing the USA population descending into a kind of 'psychotic fugue state' as 'millions' become affected by 'hyperinflation' that will 'eat away' their 'spending power' like an 'acid' while others will 'suddenly be vaulted' into 'piles of (fiat) currencies' due to the 'hyperinflation' happening to 'favor their investments'. The 'dislocation of assets' is further discussed in Markets section.

Consumers all across north America including CanadaPop are showing as 'hitting the spending wall'. This 'wall' is indicated to 'kill off' many tens of thousands of local businesses by the end of the year. The label we will apply to this phenomena is 'shopping collapse' which is the view from the 'retailers' perspective as their 'customers' will be 'unable to shop'. The 'spending wall' is showing as being especially difficult for 'food vendors' at all levels, but just like real estate, the 'high-end' is indicated to 'suffer more deeply and more rapidly'. This is seemingly shaping up to be a new wide meme for this current depression; that is that the 'high end' in prices on anything is going to 'plunge' in demand much faster, and much deeper in a percentage than other categories of goods. This has been forecast in these reports for years for real estate, and other 'investment' grades of goods, and now the language is seen within modelspace to be moving over to the 'middle' of our society. The data sets are forecasting that 'restaurants reservations' are going to be much easier to get in the future as fewer people are going to go out for dinner to 'commercial restaurants'. The data does show the rise in 'unlicensed kitchens', in 'officialdom speak', that will seemingly, according to the data, come to be known as 'flavals' or some variant, and are best described as 'collective kitchens'. The idea is that people will still require the 'social release' of restaurants, but not be able to afford them, so will work cooperatively to provide the experience without the 'prices'. The whole of the 'unlicensed kitchens' movement is shown as irritating government, and thus the 'crack-down'. However, it won't work, and the data sets have this idea of a 'collective approach' to low cost socializing evolving into many different forms of new local festivals.

Yet more data is forecasting that the 'economic crisis' is going to morph into a 'political crisis' as the population in many 'politically hot regions' are going to 'turn out (into) the streets' in very large scale protests. These sets are suggesting that 'sporadic' and 'episodic' outbreaks over the course of a few days in separated areas will be a sign of the pending 'rage slash' that the data sets are forecasting to 'burn an arc' or 'burn in an arc' across the north east of USAPop. These sets are suggesting that economic failure, and continuing degradation of the systems that the population depends upon for daily survival are going to reach a meeting point such that 'rage' at the system is going to 'set fires'. The idea coming out of these sets is that even though the weather is bad, the attitude is worse, and protestors will first set fires to warm themselves, then, when attacked by the police, will use the fire as a weapon. It is showing as being a 'defeat for authorities' in which the 'ranked minions' are beaten back, and forced to withdraw with 'men on the ground'. To their credit, the population cares for the wounded from both sides, though

in an interesting twist, will be 'arresting' the 'wounded police officers' while they are administering health care.

The data sets for September and beyond are showing that USAPop will be 'visiting the bank' at an 'obsessive level' over these next few months as the banking system degrades to the point where there are 'local', 'regional', 'national', and 'on-line' versions of 'bank runs' that make it to the 'msm news'

MSM or otherwise known as main-stream media, or the propaganda press is showing up as 'participating' in the 'daily life' of USAPop as the whole 'nation' is showing as 'morphing' into a 'state of chaos'. The MSM is going to participate in the sense of having to 'report' on 'themselves' as they become 'center to the story' in a number of ways. First we have media personalities as 'victims' of 'reprisals from the public', then as 'victims' of thinking themselves immune from the chaos around them, and as 'victims' of the police who are described as reaching a point of 'not giving a crap' any more. Not going to be a good year for the msm media personalities.

Yet more flooding is coming to USAPop. In the data sets we have so many instances of major flooding that it will end up seeming like a 'curse of floods'. Much of the 'curse' language is first showing up after another two or three instances of flooding, and one in which a 'religious university' is 'flooded out', and 'nearly destroyed'. There are other instances of 'flooding' language which are going to be reporting on 'successful preparations' and 'avoiding damage' when all about them 'lies in ruins'.

Much of the 'flooding' is also cross linked over to the 'winds' sub sets forecasting that many of the floods will be caused by storms. While there are still growing supporting sets within the 'pop corn storms' sets, the 'flooding' that will be 'wind driven' over what should have been Fall, are being described as 'towering' and 'space-touching'. This last is as though the storm clouds will try to rise beyond the atmosphere. These storms are going to be horrific, and as with the previous forecasts, they are indicated to 'wash away', and 'destroy' very large amounts of 'infrastructure'.

Many of the other earth expansion effects are showing within our data sets that are specific to the USAPop sets. Some of these are going to also affect CanadaPop. In some instances the earth expansion effect will slop over the border, in other cases it will be the resulting refugees, or 'legal entanglements' that will be the problem for CanadaPop.

For USAPop, it will be the weather, and other earth expansion effects themselves causing dislocation, and other miseries. These earth expansion effects are going to include yet more sinkholes, and yet more volcano problems, though these are going to be limited to Hawai'i and the West Coast. Other major drivers of both humans and news stories will be the 'rains', 'floods', 'winds', 'tornadoes', 'hurricanes', and the occasional 'giant tear in the ground the rips across roads and unsettle buildings from their foundations for miles'.

Other problems for 'real estate' in USAPop are going to occur due to the melt down of the financial system. As it goes further into fantasy land over Fall of 2016, the data sets are painting a picture of an epic real estate crash. These sets contain sub sets for some very large 'crashes' in funding that will 'strand tens of thousands' of deals in the middle of limbo, with no-one knowing just where they are, sold, un-sold, half-sold, or ??? The data is forecasting such a large amount of confusion within the national real estate markets that the msm lying propaganda press will have to focus on the very few places where houses are being sold, and thus will end up highlighting by contrast. The data sets are painting a picture of a story so large that the social order will be changing within the nation as a result.

It will also influence large numbers of business decisions across the nation as people try to cope with the uncertainty. The data sets are describing an uncertainty so deep and pervasive, and so broadly affective of the nation, that government has to come out repeatedly to try to address the problem. The data sets suggest that it won't work.

More detail sets are piling in for various parts of the country showing that the 'uncertainty factor' causes a ripple through the whole of the real estate markets nationwide that in turn affects everything from holiday sales, to schools to voting.

The idea is that a very large conduit of funding for real estate sales is going to 'freeze up' like a mammoth in an ice age. This is then going to 'coagulate' the 'arteries (of) funding' such that other institutions are also affected and it ripples out such that tens of thousands of real estate sales deals across the nation are bust, or in limbo, status unknown until someone somewhere figures it all out.

The detail sets for the 'real estate crash' forecast a 'drum beat' or 'staccato' as in rapid fire level of house devaluations that will be reminiscent of the boom period with multiple offers for each house, only now, as the number of houses in any area increases, those already for sale will start sending out price reduction notices to real estate agents and online services such that people who had once contacted any online real estate sales place or any real estate office will be inundated with 'price reduction notices' and 'instant alerts' of 'new prices' in your area until it becomes something of a national joke, even showing up in late night 'television'.

As may be expected, the uncertainty factor is going to create some major freak out and rage-at-the-banks time for lots and lots of people. These sets are cross linked over to the 'riots at government offices by retirees' sets from previous ALTA reports.

As the 'real estate funding crisis' matures, there are detail sets painting pictures of very very irritated and frustrated people who are stuck with two mortgage payments, but are between houses. Others will be without any house due to having sold, but unable to buy since the market will have 'frozen up' in their locale due to the 'sudden liquidity crisis'. Further details provide pictures of frustration unleashed with cars, trucks, even small airplanes being driven into bank and other offices as the crisis deepens.

In some sets there are descriptors for schools that will have revenues frozen as tax rolls become uncertain. Other impacts on schools are showing up as the national housing prices statistics are thrown into disarray with the cessation of reporting of new sales. This will apparently be a key element in that many algorithms which cannot be stopped will depend on there being new data incoming and when the new sales stop, the algos will still be calculating on an existing sales base now degrading over time so all manner of statistics will go totally out of control. It will be a 'data disease' for the western world. The descriptors do not yet have a label, and have filled this with an 'unknown' place holder. This likely indicates that the 'lack of data to feed the data mining algos' crisis will be named at the time it appears.

The data sets are describing this 'crisis' of lack of data input to the financial algos as being an event similar in emotional and global financial impact forms as 9/11, but many orders of magnitude larger.

In reading the descriptors across all of the entities that are involved in forecasting this incident, there are moments of comedy buried in the tragedy that will affect millions. These moments of comedic relief are primarily the descriptor sets that are government focused. These are describing governmental actions across the planet as being 'bad ideas chasing screwy thinking'. The data suggests that one

approach will be a deliberate 'feeding of fake data' just so the 'algorithms won't get hungry'!

Other sets are forecasting that 'governmental actions' will make their local situations even worse. These are showing up as being attempts to 'isolate the credit freeze' by making 'government money available'. Many of the similar schemes further spread the credit freeze, with predictable results.

There is much Bitcoin data in both the Markets entity and throughout various sub sets of the GlobalPop entity. The USAPop has the higher emotional values for bitcoin over the whole of the western financial empire excepting for London, but now the recent immediacy data has brought new sets for Bitcoin having something of an 'burst' of new adopters here in USAPop as a direct result of the 'failing dollar currency'. The data sets are showing that USAPop in particular, and led by areas in the South East and Central North becoming 'bitcoin hubs' where daily more and more business within the local economies are conducted in bitcoin as opposed to dollars. The data sets are describing the situation such that locals start putting up signs about it, such as no-dollar zones, that sort of language, mostly as true-humor. These sets appear later in 2016 and gain a lot of notoriety over Winter and into Spring such that new labels are applied to these areas by next Summer. An example of a label may be something like 'btc land', or 'bit zone'...as is noted, these are currently undefined, but are forecast to develop from the population.

## **Markets**

Note that as of this posting, there are very large sets showing a huge push coming out of language for an 'October surprise' in both emotions, and actions. But not in time! Rather the data sets are saying that the 'surprise' shows up in the 3<sup>rd</sup> week of September, and it does so with a real 'rush' of events. This rush is what carries us forward into October. Lots of this language points to very large amount of 'breakage' in the 'markets' in this October. BUT, there is nearly twice as much data for ANOTHER crash/breakdown/shake-out for March of 2017. So TWO crashes? The data could be showing that there is a foreshadow crash coming for mid September that gains real traction after the equinox, and is roiling and breaking in October, and then THE BIG DROP in late February and early March of next year!

This scene is being reflected back from the GlobalPop entity as well. Modelspace shows that the first 'crash' is a 'gut wrenching drop' that will result in the 'global banking system' being in 'complete disarray', alternatively, in 'total meltdown'. These sets are describing the 'system fighting to regain standing', or alternatively the 'system struggling to stay standing'. These sets are further forecasting that the financial system, as it 'crumbles' is going to be putting very large pressures on 'governments' globally and many of these are showing as not surviving the experience.

There are a very large number of separate sets that are all seeming to manifest in late September through October and into November about to mid month. Many of these are older, and larger sets that have been reported on for a number of years in some cases. One in particular, our 'caught out' set is being filled with immediacy data and then a gap, and then shorter and longer term data sets. When such a pattern appears, it has usually indicated that the 'event' occurs, then there is a period of 'reactions' including 'hysteria' in this case as the data sets are describing lots of separate instances of 'old(er) men and women' who will be 'in distress', and 'mobbing offices'. There are a lot of descriptors for the kinds

of offices being 'mobbed', and these include all manner of 'financial / wealth management' as well as 'government offices'. In several of these sets we have details that are describing 'riots by old people'...so not the most energetic of riots, but not without destruction and many arrests. The headlines coming out of these incidents are described as being 'shocking' to the sleeping population, and are forecast to 'induce mental (attitude) change' in a very significant 'tenth' of the western countries populations. Basically, the data is forecasting an 'awakening shock' as the 'truth about reality' emerges to a tenth of the general western population from the 'trigger' of the 'caught out' episode.

The Markets entity has new data forming up around the 'expected food crisis' of Winter 2016/2017 here in the northern hemisphere. Previous ALTA reports had discussed the pending food crisis, and now we are getting immediacy data and shorter term data sets for a continuing food crisis both at the 'crop' level and at the 'costs level' over these next few decades.

The credit freeze language continues to gain within modelspace. It spreads out much like ice on a pond through the financial system. The data has spots within USAPop starting in the housing market, while in other areas of GlobalPop the credit freeze begins in foods for local resorts (Spain), or 'fuels for transports (on island)', or in 'casino/resort traffic', or other any number of other areas cited in the new sets. The descriptors are providing a view of a crisis that will be deepening, and widening as it is being reported upon. Some of these reports will include descriptions of all manner of production facilities from factories to factory farms being shut down due to lack of funding for continuing operations. Or due to the lack of such funding elsewhere which means a critical part goes on back order.

The data sets are describing a situation in which the 'gold markets' are going to 'hit a wall'. These sets are focusing attention on language around no gold to be had, and again, the panic to own gold that is going to contribute to a gold fever. The gold fever is showing up as becoming a very long meme, as in decades, and being global. The idea from the data sets are that gold will be 'returned' to status as money in the minds of the masses such that the enterprising among the masses will start mining and panning for gold were it is to be found, notwithstanding the objections of TPTB or the titular owners of wilderness areas.

Years ago, when this work was just beginning, in those first few early runs that were almost completely filled with longer term data, there was a persistent set that showed that the Federal Reserve was going to be labeled as 'irrelevant to the USA economy' in 'November'. Remember, this was in 1997 through 2001 that this set was continually growing, and at a pace faster than any other in the very much smaller modelspace of those years. Of course, the problem was, we had no idea what year was being referenced. There were a number of reasons to think that 2001 was that year, especially as it was our first big forecasting success in that a brief description of the events we call 911 were released in July of 2001.

Well, now it appears that 2016 is the year that we have the 'irrelevant Fed' language manifesting. There are very large growth areas in our modelspace in both the data particulars and the patterns of their accretion that are all going to 'dumping the dollar'. Note that the language here is global. It is in every multibyte language that we scan. NOT a good sign. The rapid growth of the phrases related linguistically to 'dump the dollar' is shocking. This rate of growth is so large as to be dominating this set. Both the rate of growth of the language and the language itself are forecasting a very sudden change in the 'state of the dollar', at least in terms of who will take it and who will no longer...

Much of the word 'sudden' in the 'dollar' sets is going to an emotional shift. The idea is that people across the planet will be waking up to the idea that 'suddenly' the 'dollar may not be worth anything'. That is to say that the data is describing an emotional shift within the GlobalPop that will be 'deciding (to) abandon the dollar'. This 'decision' is actually more of a 'realization' at the individual level, and is the 'impetus' for the 'fleeing of the dollar chaos' as millions of individuals around the globe try to divest themselves of 'dollars' in a very short time. This is going to be described in the media as a 'storm of dollars' trying to 'return home'. Other wording will also mention the 'storm of dollars', and 'stormy condition for the USA dollar'.

The data sets are showing that the 'shopping collapse wall' is going to 'hit retailers' in the 'face' in early November, but by then, many will be 'over-committed' to 'holiday inventory'. This last is what is indicated to be the 'killing blow' for many 'small businesses' that had owners who believed in the mainstream media propaganda press.

Bitcoin is showing that it will be near, or recently having gone over \$1000 to the BTC by the middle of October. Other big changes for Bitcoin are within the language being expressed for 'conquering (officialdom)', and 'sweeping (like a) brush fire' through the 'minds' of GlobalPop. The 'minds' word is a bespoke reference that brings with it a much increased emotional intensity value. The data sets are describing the shift in a great many people's consciousness about bitcoin. The idea coming across is that emotional bonds will be forming as people who don't yet know BTC will be 'seeing' it as 'money'.

The data is forecasting that a 'dislocation of assets' is coming that will be one for the books. Indeed, in the data sets themselves, the words are showing up supported by such as 'historic', and 'epic'. These and other descriptor sets are providing details of the 'light (of) reality' being 'turned on' in our collective consciousness as a 'run against debt' begins. This 'run against debt' language is coincident with the 'hyperinflation' language and shows that 'debt' as an 'asset' will be 'disappearing' very rapidly. Then is nearly instantly gone.

It needs to be noted that the 'debt as asset disappearing' sets are very very tightly connected to many sets that are already manifesting. These 'debt as asset disappearing' sets show that real estate plunges, not everywhere at the same rate of descent, but everywhere the trend is down, steeply. Some of the headlines will shout 20% down, while others will try to avoid saying 59% down!

As the debt based assets die off with the underlying debt, the data is suggesting that markets in all places, and in all ways, change. Some new markets will take up the positions and activity of older ones almost instantly, such as in the 'real money' of gold, silver, and bitcoin. Others such as paper debt based real estate contracts will become 'dry husky' and 'sustained' only on other 'digital debt assets'.

The world will change as real markets spread throughout the former dollar dominated world. These changes are so profound within the language emotional sums for duration and intensity \*(our two biggest categories) that the implication is that we will not recognize 2016 when viewed from as little distance away as 2019!

As the 'hyperinflation' language gets rolling the data sets are forecasting that 'interest' is going to go through the roof. The data sets are showing that headlines in the 'financial press' are going to be 'shouting about' the 'double digits' in interest rates before the end of the year. The emotional track of the 'double digit' rates are showing up first in the last part of September as they start rising in 'fits' and 'starts'. Note that this is the linguistic track that has these levels of hyperinflation showing for later in

2016. This track begins in late September. The linguistic structures show a growth of 'breakdown' language from the 3<sup>rd</sup> week in September onward that brings in the 'hyperinflation' language at the end of October, with very large growth from the end of the first week in November.

The double digits is NOT talking about a mere 'ten percent'. We are showing that data is growing in supporting positions for some countries touting their interest rates at 'over 25%'. The idea is that the 'hyperinflation' is going to 'shock' and 'rock' the world such that the 'currency authorities' will be 'dramatic' in their 'freak out' as 'daily inflation' moves over 9%.

Much of the 9% language is centered on Bitcoin. The numbers are showing that gold and silver will be rising faster at that point, throughout GlobalPop, as the 'panic to flee paper' moves through the 'fringe' and into the 'early adopters'.

Attending the hyperinflation party across the planet will be all the stocks and other paper debt markets as the currency printing goes digitally ballistic bringing about all time record highs in not only 'stocks, bonds' and other 'paper derivatives', but this will include, of all things, 'taxes'. Yes, 'taxes'. Apparently in some countries the tax rolls are more dependent on paper debt markets that land taxes and these areas will see huge increase in tax receipts....all coming in the form of rapidly dying fiat currencies. But while it lasts, it will be deemed to be 'glorious' in the mainstream brain-dead propaganda press.

What will not be so glorious are the reactions to all this hyperinflation in the mining and resource 'shares'. There are sets going to the 'exuberance' and 'revelry' that will be 'roiling the blood' of 'mining shares purchasers' over Fall and early Winter of 2016. From late Summer, the mining shares are showing as 'leading the pack' in the paper stock markets. The mining companies are going to love it, temporarily. They will be the 'darlings', and the 'fairest', and 'finest' at the party, but, then the data takes an ominous turn...to mining shares still leading upward, but on top of a hyperinflationary froth. So the year ends with huge gains in notional and nominal returns on mining shares, but just as modelspace is progressed into 2017, the data has the floor drop out on the dollar purchasing power, and markets, those left in the western world, reaching hysterics in their daily moves of increasingly worthless digits.

As modelspace is progressed through the rest of 2016 and into January of 2017, the sets supporting the Markets entity begin forming very large ropes of cross links over to ThePowersThatBe area. Many 'social order earthquake' level things are being forecast. Most of the deep political changes within USAPop that are indicated to come from the financial system crash in late 2016 are showing as looping back around to reinforce the Spring Crash, 2017. (just a note that while it is being referred to as a Spring crash, the data is not showing much if any Spring weather at the time of the big blow-out).

As modelspace is progressed through September 2016 through the October surprise troubles and into the November 'Irrelevant Fed Days', the data sets are describing the 'Big Blow Out' that will be manifesting in Spring. Apparently the reason that it is showing up in this Fall has to do with the 'reactions' within the 'financial system' in late November and December, while they will have seemingly calmed down the roiling in the 'financial world', are indicated to be actually setting us up for the Big Blow Out that the data sets are showing as most likely in the very high levels of emotional turmoil for late February through July of 2017.

The data is going into a limited number of very large sets inside the Markets entity. Within these sets the new growth includes the 'shock' of hyperinflation that will hit 'western world' in a very short period. The data is forecasting that the hyperinflation will 'fall out' into the 'public markets (shopping, food,

gasoline, heating fuels, et al) with a 'vengeance' such that even the most 'satisfied' of the remnants of the middle class are going to be 'in the streets'. Problem for them just starts with the feeling of taking to the streets in outrage, as the weather will not cooperate, many areas are going to be very quiescent, building up steam as it were.

Now that we know that the 'missing gold' meme is the removal of the GLD options....rather than the discovery of a 'space where gold used to be', there are still the problems of the cross links over to both the 'nazi gold hoard', as well as the other cross link over to the 'lunar gold', or 'gold moon' sets. Well, maybe over this next month those will be revealed, saving fingers having to bash on keys.

## **SpaceGoatFarts**

While there have been hints of 'time laboratories accidents' for a number of years, and then in 2015 the data sets started pointing to a 'summer event', likely in Europe, in which 'cafe patrons' would be 'time hosed', resulting in some serious level of distress to the people involved. In 2016, there were a number of new growth areas in the meme, and then a decided emotional shift to immediacy data sets that seemed to indicate that reports of the time accident would be manifesting this year. New data has appeared in new areas in those sets. Further, there have been a number of 'real world' incidents relating to CERN's LHC and claims that it is 'affecting time'.

To recap, it should be noted that the forecasts of the 'cafe patrons' being 'temporally disturbed' language is indeed appearing. It would appear that my idea of the 'scope' of the incident was way too small. The data forecast language with very specific emotional parameters, I screwed up in the interpretation as the language has, and is, manifesting as a major sub set of the Mandela Effect meme. Within this meme there are claims that Nelson Mandela was dead in prison in the late 1970s and now is not. Please see my 'timetalks' discussion about how this came about. However, the 'uncorrected history/false memory mistake' within the Mandela effect notwithstanding, there are indeed, accurate, and evidence backed reports of time being 'off kilter', or 'strange' or 'changed'. As with much of the woo-woo world (think UFO's), there are vast amounts of nut-job reports, strange and unverifiable stories, mistaken impressions, and a few cases where actual evidence exists. We are there now. There are sub sets of the general Mandela effect such that, if investigated, you will find physical evidence that does point to history not being what it once was, or rather, history now, not necessarily being history in the future. Stated another way just to muddy the temporal looping, it would seem that there exists physical evidence that some changes have been made to our current understanding of what has happened in the past.

So just to be clear. There is NO evidence that any 'thing' has been moved through time, forward or past. But there are clear clues that there are divergent memorial path lines within our understanding of history and that we do have physical evidence to support this idea.

As an example without going into the details, there are reports of the car in which JFK was assassinated being a 4 seat versus a 6 seat car. Note that the conspirators had the car destroyed, the day of the assassination, before even sending JFK's body back to DC. Again, there now exists photographic evidence for both, or rather, for either, actually being the case in history. Is it a condition of 'bad reporting that has crept into the historical record? No support for that position, and plenty of support for

the idea that the images are each historically 'accurate'.

There are many other such examples, and it appears that this will become a 'growing trend' as our data sets are forecasting yet more 'time glitches' or 'temporal accidents', or even 'perceptual temporal crinkles'!

Time, what a bitch, eh?

There are several sets going to the idea of 'telepathy' and other 'mental state changes' will be 'manifesting' over these next months such that 'commentary' will be appearing about 'strange collective mental illness episodes' seemingly random in which crowds or parts of crowds will suddenly 'perceive the world differently' and 'experience' their relationship to 'physical laws' in a different way. These different ways are being described as 'psychic episodes' that will include 'hearing thoughts', and 'feeling' as though 'in two spots (on earth)' at the same time. As may be expected, the crowds that experience these effects will be demonstrating that they were totally unprepared for such. They are described as going into a collective 'freak-out' that will draw lots and lots of media.

There are a number of new sets growing in our model that are forecasting that the DIY Biology (gene tooling) is going to 'escape' from someone's garage, and from that point on, humans start sharing the planet with our rather bizarre thoughts come back to us as creatures, plants, animals, and WTF?

We have descriptions of all manner of strange juxtaposition of sets that bring up the idea of 'silk worms' that do not produce silk, yet will be producing very useful 'industrial fibers'. Further there are going to be variants that will be 'huge', and 'produce industrial base fluids'...from 'waste products'. There are a great many other sets with even stranger overlapping descriptors that indicate humans are about to start down a really different path. These sets are describing people creating colonies of bacteria that are specially designed to produce certain products, that then are used by other bacteria to make whole 'bio-film factories' that will, for example, be able to be 'injected into oil patch/collection point' and have 'gasoline' come out. Others will 'eat cement', while others 'eat rust', and produce 'recycled iron' as a result.

Yet more strangeness is showing as coming from more developed animals as 'news' of some ambitious experiments leaks out of laboratories that indicate that 'giant sea creatures' are being developed to 'harvest electricity' from the ocean environment. These are showing up as 'seed factories' that will be 'launched', and will 'find' the material in the ocean to 'build themselves out' into 'energy harvesting machines'. Probably will not manifest quite as uncontrolled as it sounds.

The data sets are showing that a 'time crime' will be 'visible' in the media by the end of 2016. We can note some of the detail sets that are going to the 'financial gain' motive, and the 'delaying (of the time)' that participated in the 'gaining the loot'.

As a natural consequence of the rise of the new biosphere members here on earth in the form of the new species of insects, animals and ???, there are many sets in the SpaceGoatFarts entity cross linked over to the GlobalPop entity that suggest that some humans will be reacting badly to these changes, and will set about in an active 'war against alien invaders'. This is apparently going to be a large enough meme that groups will be involved and will set about 'saving earth'. However there are going to be consequences when their idea of reality runs into contention with that of others reality. This meme is showing as having legs into the future, and causing lots of problems.

A 'crack it' and 'refine it' on site device is coming to the oil industry. The interesting part is that the side effects will be desktop sized oil refineries for old waste oil at your local oil store...these devices will be replaced with the spread of the DIYBiofilm approach to materials science, but for a number of years, primarily in the western, former dollar empire, hemisphere, the 'desktop refineries' will be a major industry. A side effect of these devices will be the waste heat that they will be known (even labeled) for throwing off as they crack the oils. In the latter part of the 2030s as the Sheet (of glacial Ice (yes, you capitalize something that Big)) slowly creeps onto the northern hemisphere, we are going to really appreciate the heat.

Data is forecasting that new materials sciences that are related will develop, at least conceptually to the point of some form of demonstration over this next year. The first of these technologies is a form of 'freezing' at a 'near molecular level'. But not 'cold freezing', but rather, a 'slowing of vibratory intent'. This 'slowing' process is described in such a way as to seem to be a form of slicing minute fragments off the primary pulse of the matterium such that when this is applied to 'stuff', the 'surfaces' of the stuff will 'age slower' in the sense of being much more resistant to UV and chemicals and other forms of dynamic entropic degradation.

The second of these related technologies is a form of a 'consciousness amulet'. This is not a charm, nor a decoration, but of course humans will quickly make the device into both. The device is being described in language that, at first glance, makes it seem like a 'psychic mood ring', but on getting into the details, it ends up being more of a 'psychic impression sponge'. This device becomes a very good tool for humans as it matures into something close to a 'recorder' for feelings. It is NOT 3d movies or something like that... no imagery, no sounds, no visions, just the 'feeling'. Now note the data is showing that this is going to be a 'female' only device, as males will mostly ignore it as it will be too subtle for their use. Also note that when these come out they will be a 'pass-around' form of entertainment where the files will be recorded and distributed via person-to-person networks. Then the data has some women being so 'powerful' as recorders that they develop followings JUST as the tech improves and we learn to magnify and edit these 'feelies'. The whole thing goes mega-global-commercial with vast spin off's, new celebrities, cult followings, and becomes a very mature entertainment industry within a shockingly short period of time that shows these have global presence after mid 2030's.

The data sets are forecasting that the word 'porous' will be occupying a bunch more of our mind-time over these next few years as various new forms of 'porous' materials are discovered that will be used in all manner of the 'new electrics' devices. Some of these uses will include a material that is not really paint, nor really a solid until applied. Is not put on with a paint brush, but does come in colors, and is 'electrically dynamic'. This stuff is being described in words that make it seem as though a 'conductor' of electricity, but perhaps a better descriptor would be 'smart, paint-able/print-able, wiring'. This stuff is showing as being a huge boost in the production of other stuff such as super-smart cars, and computers so thin as to be mainframes within a thickness of a sheet of paper.

Many other sets within the new electrics area also directly hold or are cross linked over to wording about 'electrically dynamic' devices and materials. This is a new usage of the wording and likely it will be re-labeled by the people that invent it, but at the moment this is the best that my lexicon can provide. So looking at it further we find that the 'dynamic' sets contain language similar to what may be used to describe 'life-form'. In this instance we have many sets that are taking that description and skewing it over towards a 'self-repairing, homeostasis seeking matrix' for the 'support of delivery (of) information

and power'. These 'dynamic electrical devices' are further described as being expansive in the sense of multifunctional, but the really core part of the description makes it seem as though these devices will 'take a charge' and then 'enhance it (make more power)' over time by 'kinetic activities' such that we can have 'self-powering (once sufficiently charged) devices'. Not really 'free energy' as there are huge energy costs in the creation of the devices, and they do degrade, and eventually break down, and their charges can be drained or damaged, but hey, take what we can get in our robot slaves, eh?

## ***Conclusion: Thus does Change emerge in the world...***

The Powers That Be (TPTB) have decided that humanity is NOT going into 'mad max' world. Rather they have chosen what we are calling 'sci-fi world' (SFW) here at HPH.

We can think of SFW as being paper debt fascism taken to global level by a global elite supported by willing (and mostly unaware) technocrats and technologies with the intent of using the massive plenitude that paper debt allows to push themselves at the head of humanity into space and time in all directions. This SFW is their goal. Problem for them will be that getting us from here to there involves crossing the large chasm that is between this now, and their goal.

Their plan had been to push the mass of humanity so hard, driving us forward with such force at all levels that even though lots of us were to perish falling into the chasm, the remainder could walk into the brave new world order of TPTB on the crushed remains of those who had perished.

Their plan would have worked perfectly, excepting for one minor detail.

Universe favors humans.

So their plan starts going wonky, all pear shaped, turning into platypus shit-piles floating in the water right in front of their eyes. They react. All good plans are adjustable. They adjust. They adapt. No good. Each alteration bring out its own ripples of resulting problems compounding the ones already manifest. So they react some more. And yet, still failure creeps in on little mouse feet that very soon are self-powering into big elephant feet. It is the 'out of control spiral that all organizations fear where every action to correct an action becomes its own new problem creation stream. From there, things get worse. With no Max Smart to save the day by his effective bumbling into JUST the perfect solution for the half hour episode. Instead, they watch helplessly and hopelessly as their own actions propel the changes that they dread.

Ours is to wonder why, as we watch their fading empire die.

Ours is to question, why?

Onward, onward, in to the valley of death rode the .001% in their SUV's.

Why?

Universe favors humans....i mean, really, look at us, would you have given us a bat's chance in hell if

not for universal favor and the grander human destiny? Neither would I, but universe favors humanity, and the powers of the old empire stand in the way, as they always do (you'd think they would learn!), and thus one of those nasty 'brooms of history' is appearing to clear the path for our next Big Adventure in Universe!

## About Predictive Linguistics and our methods

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

As an example, the word 'prophecy' may be read up by our software at a sports oriented forum. In that case, perhaps, due to the emotional sums around the context, and the emotional values of the word itself within the lexicon, it would be put into the contextual 'bin' within the database as a 'detail word'. Note that the context of the use of the word in the sports forum is lost in the process and is of no use to us in these circumstances. What occurs is that the word is picked up as being atypical in its context, therefore of high potential 'leakage of future' value. The way this works is that most sports forum language about future events would be statistically more likely to use words such as 'bet' as in 'I bet this XXX will be outcome', or 'I predict', or 'I think that XXX will happen'. So it is the context plus emotional values plus rarity of use within the context that flags words for inclusion in the detail level of the data base. Further, it is worth noting that most detail level words are encountered in our processing mere days before their appearance. Within the IM data primarily, and then within ST data next. But a preponderance are discovered within the IM time period. Perhaps an artifact of our processing, if so, one not explored due to lack of time (cosmic joke noted).

Words are linked by their array values back to the lexicon using our set theory model (see below), and the language used within the interpretation (detail words excepted) derives from the lexicon and its links to the changing nature of contexts as they are represented within our model.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **ALTA report** is an interpretation of the **asymmetric trends** that are occurring even this instant as

millions of humans are typing billions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

In our discussions, the interpretation is provided in a nested, set theory (fuzzy logic) pattern.

### **Definitions:**

**Aspects/Attributes are:** collections of data that are within our broader linguistic structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

**Entities are:** the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

**Lexicon is:** at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

composed of: **emotional qualifiers** which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

**Spyders are:** Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

**List of entities** explored in this report:

### **GlobalPop**

The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

### **USAPop** (and any other nation state/territorial reference)

All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

### **Markets**

The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

### **Terra**

The Terra entity is the master set for all structures that relate to the planet, and the physical environment of planet earth. This master set frequently and increasingly has

extensive cross links to the SpaceGoatFarts entity.

### **SpaceGoatFarts**

This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

### **Data Types**

**IM = Immediacy** data with forecasting effectiveness from 3 days to the end of the third week. Error range is 4 weeks.

**ST = Shorter Term** data with forecasting effectiveness from the 4<sup>th</sup> week out through and inclusive the end of the 3<sup>rd</sup> month (from date of interpretation). Error range = 4 months.

**LT = Longer Term** data with forecasting effectiveness from the end of the 3<sup>rd</sup> month out through and inclusive of the end of the 19<sup>th</sup> month. Error range = 19 months.

### **Terms employed:**

**Cross links** – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

**Linguistic structure** – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

**Meta Data Layer** – in modelspace, when a meme appears directly held in numerous sets, at the same level of support, it is labeled as a 'meta data layer'. These 'layers' can be thought of as a common linguistic structure that forms with differing supporting sets in the various entities. For clarity, a meme in Terra entity would not have the same supporting sets as that same meme in the GlobalPop entity, but both would be part of the larger meta data layer that the meme reveals.

**Modelspace** – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

**MOM** – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

**Set** – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

**Temporal Echo** – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

**TM = Temporal Marker**, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.
