Crash Map - March, 2016

covering 2016 - 2032

Introduction

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

As an example, the word 'prophecy' may be read up by our software at a sports oriented forum. In that case, perhaps, due to the emotional sums around the context, and the emotional values of the word itself within the lexicon, it would be put into the contextual 'bin' within the database as a 'detail word'. Note that the context of the use of the word in the sports forum is lost in the process and is of no use to us in these circumstances. What occurs is that the word is picked up as being atypical in its context, therefore of high potential 'leakage of future' value. The way this works is that most sports forum language about future events would be statistically more likely to use words such as 'bet' as in 'I bet this XXX will be outcome', or 'I predict', or 'I think that XXX will happen'. So it is the context plus emotional values plus rarity of use within the context that flags words for inclusion in the detail level of the data base. Further, it is worth noting that most detail level words are encountered in our processing mere days before their appearance. Within the IM data primarily, and then within ST data next. But a preponderance are discovered within the IM time period. Perhaps an artifact of our processing, if so, one not explored due to lack of time (cosmic joke noted).

Words are linked by their array values back to the lexicon using our set theory model (see below), and the language used within the interpretation (detail words excepted) derives from the lexicon and its links to the changing nature of contexts as they are represented within our model.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **ALTA report** is an interpretation of the **asymmetric trends** that are occurring even this instant as millions of humans are typing billions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

In our discussions, the interpretation is provided in a nested, set theory (fuzzy logic) pattern.

Definitions:

Aspects/Attributes are: collections of data that are within our broader linguistic structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

Entities are: the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

Lexicon is: at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

composed of: ***emotional qualifiers*** which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

Spyders are: Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

List of entities explored in this report:

GlobalPop

The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

USAPop (and any other nation state/territorial reference)

All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

Markets

The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

Terra

The Terra entity is the master set for all structures that relate to the planet, and the

physical environment of planet earth. This master set frequently and increasingly has extensive cross links to the SpaceGoatFarts entity.

SpaceGoatFarts

This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

Data Types

IM = Immediacy data with forecasting effectiveness from 3 days to the end of the third week. Error range is 4 weeks.

ST = Shorter Term data with forecasting effectiveness from the 4th week out through and inclusive the end of the 3rd month (from date of interpretation). Error range = 4 months.

LT = Longer Term data with forecasting effectiveness from the end of the 3rd month out through and inclusive of the end of the 19th month. Error range = 19 months.

Terms employed:

Cross links – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

Linguistic structure – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

Meta Data Layer – in modelspace, when a meme appears directly held in numerous sets, at the same level of support, it is labeled as a 'meta data layer'. These 'layers' can be thought of as a common linguistic structure that forms with differing supporting sets in the various entities. For clarity, a meme in Terra entity would not have the same supporting sets as that same meme in the GlobalPop entity, but both would be part of the larger meta data layer that the meme reveals.

Modelspace – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

MOM – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

Set – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

Temporal Echo – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

TM = Temporal Marker, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.

Data and Interpretation

Meta Data

In our work here at halfpasthuman, we use the term 'meta' in its meaning of 'beyond', or 'the next level up from...', and as such our meta data discussion is focused on the 'larger meanings' expressed in the patterns of the data as it accrues, rather than the data itself. In this instance the data meaning came actually 'crashing' out at us from the word frequency of 'crash' and its many variants arising in the data. Now note, we do not sweep up and use conscious discussions from the internet, only the variation in language from the established pattern type within that domain of knowledge (ie. Words normally not found in that form of discussion, such as 'battleship' showing up in a gardening forum on zinnias and not referring to a label or name).

So, given the repeated references to 'crash' and 'crashing systems' within the data, it naturally flowed to produce this 'Crash Map' for 2016 in which our data sets are directing attention to specific demonstrations from universe of the 'crash' idea as a necessary step on the path to what-comes-next.

Certain to come next, at least as a main component, is, as the data is forecasting, the extensive use of the word 'rationing'. Expect to see various forms of the word work its way into daily use over this year, especially within the 'dollar empire'. As this 'dollar based empire crashes', the 'rationing' is showing as being applied to 'silver coins', and 'gold allocations', and 'medicines', and 'electricity', and hundreds of 'food items', as well as 'strategic industrial products'. The data is indicating that most of the 'rationing' language will become 'north america' (including canada and mexico) and 'europe zone' focused over late 2016 and into 2017.

Terra

The Terra entity is indicating that once again there will be 'weather dichotomy' throughout 2016. The 'hot and deadly summer' in parts of the northern hemisphere will be used as a 'rallying cry' by the 'warmists' aka 'global warming religion adherents', but it will be juxtaposed against 'abnormal and extraordinary cold places' in the middle of 'blazing hot summer' affecting other areas.

The West Coast of north America is showing as being within the 'abnormally hot' zone for most of 2016 and 2017, until the 'earthquake' period in mid 2017. Coincident to the 'earthquakes', the 'heat zone' will 'break' on the West Coast. The data sets are showing that the 'hot summer' all along the 'west coast' (even into Alaska and the Arctic) will be both 'setting records' and 'killing people and wildlife'.

In spite of the 'take it to heart' attitude of the 'warmists', the 'heat zone' is showing as 'temporary', and an actual 'prelude' to a 'decade' of the 'coldest winters' seen for centuries. However, in 2016, the 'heat' is indicated to be 'brutal' and 'scorching' to the extent that much of the 'mainstream media' over 'summer' will be 'spending time speculating about the weather'. The data sets are showing that while all of north

America will be having an 'extraordinary hot summer', the 'intense heat zones' that will be 'killing people and wildlife' will be in 'restricted patterns' that will involve parts of the 'west coast' and then areas as far east as Texas and Louisiana.

In several sets are new linguistic structures for 'airplane crashes' (or aborted take-off's) that will be due to 'heat problems'. Other 'heat' related sets show that 'airplanes' are 'grounded' due to 'heat problems' (on roads) 'that will cause the 'fueling system' to 'crash' and be 'unable' to 'meet responsibilities'.

While it will be the 'heat index' numbers that will be 'continuously used and displayed' on the media for the 'west coast', it will be the 'hospitalization rates' that will be gripping the attention of the rest of the continent and world as 'hospitals' and 'cooling centers' become 'first line (of) defense' in the 'hot and deadly summer (of 2016)'. The new data sets are suggesting that videos of 'crowded hospitals' will be a 'recurring image' on the 'msm news' over 2016 as the 'strains' on the USA Pop and Canada Pop are exposed in the 'crashing breakdown' of the 'healthcare "system"' in its first ever, 'real test' of its 'capabilities'.

Other 'breakdowns' within 'infrastructure systems' will be something of a recurring theme in this (and maybe future reports) as the data is indicating that 'strange (make that 'new') conditions' of 'climate' will be 'causing breakdowns' in human 'infrastructure' at many levels across much of the planet. While this has and is an ongoing process of 'man versus nature' at least at the level of entropy, the data sets are showing that various types of 'man versus nature' systems, long thought to be 'successful' will be 'crashing' over 2016 (and into the early 2020's). These systems are showing as being 'battered' by 'radiation' including 'high levels' of very intense 'ultra violet' (and 'retained infrared') such that 'reported failures' will escalate to the point that the new mainstream media buzzword is 'crash'. Note that they will repeatedly try to associate the 'ongoing systemic crashes' to the 'global warming' and 'carbon credit scams'.

Mining and material transports are showing as being 'visibly', and 'increasingly affected' by 'expansion of the planet'. This is indicated to show up as 'mine sheer' and 'pipeline sheer' in which parts of the earth decide to 'separate' and in the process, 'mines collapse', and 'mine tunnels sheer (close)', and 'pipelines sheer'. In the case of the 'material transports' such as 'pipelines' the 'damage' will lead to a number of 'local ecologic disasters' as 'pipelines fail (and) continue (to) drain'. This is also showing as affecting 'above ground feeder systems' that will include 'long run conveyor belt systems' which will be 'twisted' and 'turned' by 'earth movements' such that 'video' of 'broken system spewing (material)' will begin to be posted globally.

New data sets at the detail level suggest that 'video' of 'roads rupturing' (caught in the act) will be posted in 2016. While the evidence for expanding earth will not be reaching mainstream media, at least not in our data sets, what is showing is that the mainstream media will be 'flooded' with more and more examples of 'active planet (beneath our feet)' such that more will naturally make it into the mainstream consciousness globally. This is showing as producing several interesting social effects including some that are indicated to 'flip over' the 'flat earth' meme. These will be self evident when they manifest so won't be further discussed here until that time. The 'roads rupturing' language sets also include a number of sets going to 'car crashes' which will be caused by 'road damage' which is due to expansion

effects and not 'weather' nor 'neglect' as may be seen being cited in upcoming reports of the 'odd number (high) of car crashes' in 2016 (especially in Summer).

GlobalPop

The GlobalPop entity is forecasting that the 'speed' of the 'financial collapse' will 'shock' the 'global population'. This 'speed' is going to be so 'shocking' and 'so mind-numbingly fast' that it will form a part of the 'discussion' that comes 'boiling up' as 'system after system' go 'parabolic', and in some cases, the data is forecasting the damage to be 'irreversible' only seconds 'after the effect/event (algorithms get screwed by circuitous data loops)', and yet minutes before humans even 'become aware' that 'their company/future/market/government' just 'ate its own tail'.

The data is indicating that 'circular crashes' will become something of a wide meme as the 'inter-related-ness of everything' becomes 'evident by (its) (sudden) absence'. These new sets have details going to the idea that the 'sham/illusion' of the 'financial world' will become 'mere smoke' seen to 'blow away' in a 'stiff wind'. The 'stiff wind' sets are linking many sets together, from various entities, but no causal relationships are necessarily implied. Rather modelspace is painting a picture of a process that can be described as 'self feeding' as many 'interrelated computer systems' become 'cross contaminated' by 'bad data/data corruption'. There is NO suggestion within the data that this is a deliberate act or a nefarious plot. Again, there is not a human agent involved in what the data sets are forecasting. Rather they are suggesting that the many 'systemic interlinks' will 'go awry' as 'bad data build-up' creates a 'new form' of 'data mining collapse'. As many of the governmental control systems are algorithm dependent, along with much of the totality of the financial infrastructure, the 'inter-twined data pollution' issue is one that will be 'wrecking' and 'destroying' of 'systemic integrity'.

This effect is being forecast to be limited to the 'western digital systems' in the main, though there will be some direct, though limited impact on ChinaPop. Most of the impacts globally will stem from the reactions and the developing global depression which is NOT being caused by the 'systemic crash' ahead, but rather is its causal agent set in motion long ago in either 1971 (US off gold pay out for oil standard), or 1913 (US sold into Federal reserve debt slavery).

The 'systemic, intertwined crash' is indicated to be a 'capstone event' on the long playing 'pyramid building' of 'decay and corruption' at the heart of the American Empire. It is not its cause, but it will be (in the future) associated as the 'fireworks' which 'launches' the 'global (ship) of (big) Depression'.

The data sets are still showing that the 'voluntary (response to developing depression conditions) migration wave' will be toward 'south america' even as the 'economies' of the continent 'roll over' into 'underwater debt - barely afloat' remnants of former western-imposed 'financial systems'. In spite of the 'crash' of the 'western banking control system', or perhaps because of it, the data is forecasting that 'south america' will become a 'magnet for migration' of the 'technocrats' of Europe and North America.

The data sets within GlobalPop are extensively linked internally to the very large sub set of the USAPop. These links are centered on the 'response' and 'reactions' of the 'global populace' to the 'crashing' of the 'Federal Reserve dollar' and all the edifices it supports including tyrants and tyranny.

The 'federal reserve dollar' was also a key support for the 'just in time distribution system'. The new growth in this area is not reassuring. The new language accruing is very broad in its scope which indicates rising emotional turmoil of a long lasting nature, and the 'natural human response'. Many of the forecast 'natural human response behaviors' are not 'healthy' choices to make in these times, so be aware that forecasts in these pages are meant to be a guide to risk avoidance.

The data sets are showing that our 'social contract is broken' language from early 2004 has reached a 'threshold' that, once crossed in 2016 as the 'emotional and physical pressures escalate', will bring about very violent reactions from humans globally.

Though the data is forecasting a lengthy period of many years of 'global depression' and 'crashing markets', with much 'activity' to occupy and entertain all and sundry, the forecast is for the 'out of control state (governments/officialdom at all levels)' to be the most 'discussed subject for 2016 to come from this first year of 'officially acknowledged global depression'. The 'dreaded D word' will be en vogue by late Summer, and will be the top trending subject for a long time thereafter. The forecasts are for the 'reaction (by) government(s)' to 'suddenly being broke' as being the 'top subject' for 'social discussion' by the end of the year. This is pertinent as there will be a 'cacophony' of 'tens of millions' of 'logged incidents' of 'bad behavior' by 'freaked out governments' over 2016. What is more lasting is that the data is forecasting that a 'new (channel/method/means)' of 'people control over government bad behavior' will be seen 'emerging' from the 'reporting process'.

On the subject of 'social media' it needs to be noted that 'governments' all around the planet will be 'attempting to control' the 'social media' as their 'plans/strategies/tactics' for 'coping with global economic depression' will be 'failing', and 'constantly reported' on the social media. The data is forecasting that this will be one area of 'continuing contention' to float around the planet this year. In detail layers we do show many instances where the 'social media' will be used to 'organize (popular) responses (to civil problems)' that will then be 'labeled' as 'illegal' by the 'officialdom' as it tries to cope with the 'developing loss of power'.

In recurring themes that spread across the 'dollar dominated' part of the world, the data is showing that the 'loss of rule of law' becomes 'so commonly discussed' as to 'break down' the 'last vestiges of respect' for the 'workers (in the courts/law system)'. The data sets are forecasting situations of 'mobs chasing judges (and lawyers)' who will be 'fleeing' as they had 'represented' the 'corporations (and or government/officialdom)' in a way that 'deeply impacts local situations'. What is being described as over taking the 'american/anglo financial empire' is the 'loss of (conditioned) mental authority' of the 'legal system' and all its 'agents'. The data is specifically referencing incidents that will arise in such numbers that even 'TV (aka hollywood mind control machine)' will be 'forced to react' with 'counter situational programming' that will 'vainly' try to 'project judges (lawyers et al)' as 'good guys'. Part of their problem (TVLand) will be that the data is forecasting a 'daily flood' of 'people versus the establishment' at such levels as to 'swamp' any 'propaganda attempt'. While focused on the American-Anglo Empire, the data shows that such, or similar situations will be affecting large areas of Europe and South America (especially Brazil, though there a 'cadre of judges' is showing as 'bringing trust (of the people)' to their 'process').

In other areas of support for the 'breakdown of the social contract' we find new detail sets forecasting 'raids' on 'government installations' where 'foods (and other stores)' are held by 'local populations' who will be 'disguising themselves' as 'terrorists (or other 'enemies')' in a direct 'emulation' of how ThePowersThatBe conduct 'false flags'. The data shows that some of these 'raids' are going to be 'spectacular' as 'populations' will be 'liberating food (by the ton)' from 'officialdom warehouses', and in other cases, 'absconding' with 'vital records' as a 'side effect' of the 'raid' which then will be 'posted on line' causing 'huge damage' to the 'political establishment' (within that country (EU most likely)). Some of the 'other raids' will include 'raids' on 'large religious/church compounds' by 'governments' for a wide variety of reasons from 'wealth seizure' to 'hunting fugitives'. In this last case, the data suggests that the 'government' involved will be so out of control, and out of touch that it will be 'bombing wrecked/abandoned cargo ships (see Markets)' attempting to 'destroy (the) raiders' (who will be presumed to be among the people living on the 'wrecks').

New (and more positively focused) sets in the GlobalPop entity are going to the idea of 'loc-prod movement' (locally produced everything you possibly can) becoming a 'rising response' (especially within the hard hit 'former american dollar empire') within the GlobalPop to the 'rapidly developing global depression'. The data sets are forecasting that not only will the 'locally produced' include 'all possible food resources', but will also include the idea of 'repair, re-purpose, re-use' taken to new levels of 'ingenuity'. The 'global transference' of knowledge via the internet will lead to the rise of hundreds of new personalities among those young people 'leading the way out', as well as thousands of attempts at 'new ways (of) self organizing'. Note most of these will fail.

The data sets are gaining new growth for the 'blossoming' of the 'new renaissance' which is described as 'smoldering beneath (a lack of money)'. The idea is that the juxtaposition of the 'crash of currencies (power structures)' and the 'collision of cultures' and the 'base of technology' is going to create 'new social orders' as humanity works its way out from under the huge pile of dysfunction that always is 'central planning' (in this case, central bankster planning).

Within the GlobalPop entity, no sub set has a greater, more imminent 'response' and 'reaction' linguistic structure developing than that of ItalyPop.

ItalyPop

Data sets for the Italian populace show that they will be the fortunate ones at the very point of the 'breakdown of the global financial central banking state'. These sets are showing that in 2016, ItalyPop will be hit by 'financial ruin' as 'derivatives' melt and 'take away pensions' and 'life' for 'millions'. Further, other problems will emerge to 'pressure' the situation more as 'volcanoes' and 'earthquakes' as well as 'storms' and 'water pollution' manifest over Winter through to mid Summer (northern hemisphere). Of course, 'refugee problems' will be ramping up as may be expected, but what the data is forecasting is that an 'unexpected wave' of 'refugees (being pushed south)' will also contribute to the 'emerging human movement bottleneck' in northern Italy.

The extensively cross linked sets of a 'banking (system) crash' in Italy are terminating in 'Federal

reserve' sub sets where the primary values are suggesting that an 'intertwined derivatives' will create a 'banking (no win) stalemate' on 'which should pay which for which (contract)'. This is further amplified as a problem for the ItalyPop as both Spanish and Portuguese 'banks' will be revealed to be 'deeply troubled' by the 'same issues' as the 'mingling derivatives'.

The results of the 'derivatives crises' upcoming is forecast to be a 'systemic failure' in 'european markets' that will be both 'based' and 'reflected back into' the Italian 'banking system'. This is indicated to have impacts on Italian 'food' and 'life costs' very rapidly. Further, a 'collapse' of 'global (derivatives involved) pension systems' will 'surface' in Italy in 2016 (according to the data) that will catch the 'government pants down, peeing on itself'. This is not going to be easily resolved and the data sets are forecasting that from the 'pensione scomparso (disappearing pensions)' moment, the ItalyPop will be 'actively' in a 'depression' that will persist the next '9/nine' years.

As forecast so long ago (ALTA in 2006/7?), the data sets are growing in the 'food riots' spill over into 'vatican archives buildings' and 'hidden secrets' are 'revealed' as the 'mob loots' the 'stored treasures'. This will be a very large temporal marker indeed, and every indication within the data accretion patterns are pointing toward later in 2016.

The 'food riots' within ItalyPop are likely going to be called something else initially, and that is most likely some label associated with 'pensions' and/or 'corruption'. In the propaganda media, the actual cause will only be discussed locally where the 'shock' of 'incoming hyperinflation' will not be able to be 'denied'. Note that the data sets has a number of new personalities emerging from this new 'popular front movement' that will 'grow (from the grasses on the dunes)' and begin to 'assert popular opinion' onto the 'italian political landscape'. These new personalities are forecast to include some very 'technology savvy people' who are indicated to 'go (globally) viral' with a 'dissection' of the 'mainstream media control techniques' in a 'near real time' fashion. From the data sets, the impression emerges of a 'mirroring' of the 'mainstream media' by these 'enterprising young italians (though several are very old, and are the 'steering committee')' then a 'contrast and compare' to 'actual street events'. The data sets are showing that the 'italian (street) kids' will be 'copied globally' for their 'template (of) innovation'.

Other areas of 'innovation' springing from the ItalyPop response to the 'sudden currency crisis' include longer term sets going toward the idea of 'shared farms' and 'community gardening efforts' that will, over the course of the next several years, be emulated as much as may be possible in many other areas of the northern hemisphere as the same 'crashing supply system' problems (and worse) manifest. In something of an echo of the CubaPop response to the cessation of the Soviet Union funding, the data is indicating that the Italian education system, led by several southern Italian 'renegade professors' will 'open (itself)' to a 'grand social experiment' of 'an engineered response to crisis'. This all is shaping up in the data as pointing toward a major 'new urban agriculture' that will 'emerge' as a 'cooperative effort' due to the very 'dire' conditions affecting ItalyPop over these next 4/four years. The data sets are showing that totally 'new types' of 'aquaculture' and 'bio-mimicry (in systems design)' will emerge from the 'Italian experience (of the Depression)'.

Also, it is interesting to note that 2/two social trends will be changing ItalyPop in both its internal

perception of itself, and its actual relationship to the rest of Europe. For reasons which include the 'early blossoming' of the 'Renaissance', ItalyPop is not showing the same tendency for the 'young technocrats' to 'emigrate'. In fact, the data is showing that 'transient populations' flowing through ItalyPop are going to actually 'meld' in a greater manner than in more northern areas, and a 'social change' in the 'nature/character' of ItalyPop will emerge (over these next 10+ years) as 'new leaders (forced up by the response to derivatives crashing currencies)' take over Italian politics. Second to the 'new blood' in the ItalyPop, the data sets are showing that the large social trend for a 'southern perspective' is going to change the 'internal Italian image'. The data sets seem to be suggesting that Italy will go through a 're-viewing' of itself, and will be re-branding (internally as well as globally) as 'the gateway to the southern hemisphere (and africa)' over these next years. This view is also shown as being forced upon the ItalyPop by the flows of the refugee/migrant populations through the country.

ChinaPop

The data sets are showing that the forecast 'capital control police actions' in China are going to 'grow' and 'substantially' over this next year. The previously forecast 'seizure of foreign deeded property' by the 'chinese state apparatus' has now had new growth in its supporting sets with much of that being from immediacy value types indicating a near term appearance of the 'escalations' by the 'state' in its 'search for (stolen) revenue'.

New supporting sets within the 'capital controls police' are now also indicating that 'many, perhaps even thousands' of 'new schemes' will be 'unraveling' as the 'chinese economy contracts'. As a natural part of 'depression economics', 'fraud schemes' are 'revealed' as the 'funds flows' dry up. The recent exposure of the national Ponzi scheme in China is but the latest in what will become a 'flood' of 'crime revelations' by mid Summer. The data sets are showing that the 'problems (with unregulated finance)' will become so 'acute' that the 'chinese leadership' will be trying to 'cope with daily riots' on a 'scale not before seen'.

Many of the new sets contain references to a 'billion dollar scam' that will be 'surfacing' in the near future/ As this new 'fraud plan' is 'uncovered', several 'rifts' are forecast to emerge in the 'leadership' over just 'exactly how' to deal with the 'new delicate situation', which is forecast to 'involve high level (celebrity) foreigners'. The 'delicate nature' of the 'situation' due to the 'who' involved will unfortunately leave a window of time in which the 'victims' will become very 'vocal' about their 'own research'. The 'double name problem' is forecast as putting the 'leadership' into a 'bind' that will have a great number of 'very prominent people' in the unique position of 'having to wait (on someone else)'.

The data sets are also indicating that 'rioting' and other 'acts of displeasure' being 'exhibited by the people' over the many problems with the economy and the many 'new frauds' being 'exposed' will be 'interrupted' by a very large 'earthquake' described as 'bringing down (a public) arena' in 'after shocks' that, according to the data, will be 'very fortunate' in spite of how this may sound now.

Many of the 'days of unrest' that will be 'sweeping across (regions) within china' over Summer (northern hemisphere) 2016 can be directly tied to either 'fraud' or 'stupidity' at 'high levels' within

'Corporate China'. These 'episodes' of 'public displeasure' will be so numerous as to cause the 'central authorities' to 'crack down' on the 'fraud (of) corporate officers' that 'deprives workers' of their pay.

The data sets are showing a 'paranoia' that overtakes 'all thinking' on the part of the 'chinese central authorities' as they 'freak out' as the number of instances of 'social unrest' starts climbing fast from May onward. The data is forecasting that 'giant efforts' will be 'made' by the 'chinese central authorities' to 'calm (the) population' as the 'global financial infrastructure' is 'finally coming apart'. As with their 'american customers', the 'chinese producers' will be 'stunned' by how 'swift' and 'complete' the 'financial systems crash' will appear.

The 'sudden devastation' of 'global wealth (in paper investments/debt)' is indicated to cause very large shifts in the 'attention' that the 'central authorities' will be placing on 'daily life' in China, and especially in Hong Kong which will be viewed, on the mainland, as being the 'hole' through which 'china bleeds'. As the year progresses, the data sets are forecasting a 'crack down' and a 'noticeable tightening' of the 'social freedoms'. The 'central leadership displays' about 'personal responsibilities' is showing as 'not going well' with ChinaPop as the 'young people' are going to 'feel unfairly treated' as their 'activities' will be more 'curtailed' and 'surveillance filled' than their parents.

USAPop

The data sets are forecasting that the 'USA population' is going to 'go through hell' over these next '4/four years'. The 'passage (into) hell' begins in March and April as '2/two months' of 'currencies wobble' are showing as 'initiating (vast) pent-up social energy releases'. These 'social energy releases' are showing as being 'reactions' to a 'sudden' and 'severe' impact on 'prices' and 'availability' of almost 'all goods'.

The 'crashing' of the 'global financial system' is indicated to 'change USAPop overnight'. In some cases, many will be 'partying' due to the 'perceived liberation (from) debt (lots of student debt slaves as an example)', while in other cases, there will be 'suicides', both 'willing' and 'unwilling/unwitting' as the 'financial system wastage' almost instantly begins 'revealing massive frauds' that will 'reach up high (into political/corporate organizations)'. This causes 'partying' of another sort as the 'enemies' of the 'compromised politicians' will be 'thrilled'....until they too are 'caught out' by 'funding/finance problems'.

The 'finance problems' are to be 'national', and 'wide spread', but will not be 'equal' in all parts of the 'national union'. Some areas such as 'guam' and 'hawaii' are going to experience 'life-style changes' that will include 'political re-organization', that will be focused on 'liberty (from national associations)'. These sets are also forecasting that the 'food infrastructure' of 'hawaii' will be 'devastated' insofar as the 'imports' are concerned. Both 'hyper- inflating prices' and 'product availability' will set 'the islands' firmly onto the path of 'grow-your-own' and 'rebuild it yourself'. Alaska is indicated to have 'severe economic problems' just as the 'earth expansion effects' step up to the next level of manifestation.

The continental USA has numerous new sets growing in support of the 'diaspora' of the 'population' as both 'earth expansion effects (earthquakes, methane, water)' will 'pile on' to the 'unfolding economic

chaos' as 'distribution system failures' will further 'pressurize' the situation nationally. These many effects are showing as also 'pushing up (on political parties)' as their 'demographic bases (congressional districts)' become either 'bereft (of voters)' or 'overwhelmed' by 'refugees' to the point that 'local political systems breakdown'. The 'refugees' language in these sets refer to 'near state neighbors' who will be 'forced out' by 'unfavorable circumstances' of 'earth expansion' or 'nuclear radiation' or other 'man made disasters'. Note that this last is indicating that several new, and very wide spread cases of 'water poisoning' will be making headlines soon in new areas of the country, one of which will have had the 'potential' to have 'spread the contamination nationwide'.

As the 'banking system' comes 'unglued', the 'population' is showing as 'reacting badly' and being 'video recorded as they are acting badly'. The details have 'death matches' that will be 'on video' showing 'americans fighting over' and 'with' ATM machines as 'banks are closing'. The data sets here are not suggesting a national 'bank holiday' so much as they are referring to 'mid tier banks' that will 'succumb' to 'near instant insolvency'. This is showing as being so 'prevalent' within some 'states' that 'nearly all (non major) banks' are 'wiped out state-wide'.

The longer term sets are showing that by early 2017, the 'new rules' will apply when 'purchasing' from 'overseas' or 'other than dollar countries'. These 'new rules' will be of 2/two types; the 'rules for purchasing outside USA' by the 'officialdom', and the 'pragmatic rules' of what will really happen. In both cases the net result for the 'end use buyer' is going to be 'paying up front', 'waiting for up to 4/four months', 'hoping that the price does not go up too much in the time it takes to ship', and 'hoping that government/officialdom does not declare a new tariff retroactively applied while in shipment'.

The 'hyperinflation' set held by the USAPop entity shows that the first encounter with 'rapidly rising (domestic = in this instance meaning all things to do with 'home') prices' will be initially felt along the 'border regions' in April. While the 'officialdom' response that 'confirms' the 'hyperinflation' is not forecast to appear until July, the data sets grow for 'cross border hyperinflation' to be discussed before mid April. In this context, the 'cross border' seems to be initially focused on 'ports of entry', then the context shifts toward 'state to state borders'. These sets are showing large 'convoys' of 'frightened shoppers' who will 'band together' for 'cross state shopping expeditions' as the 'prices (locally)' will be 'getting out of control'. Other sets within this structure are showing that 'availability' will also be a motivating factor as 'imports wither (to nothing)' in a period so short as to be 'shocking'.

The 'political fracturing' that is forecast to appear across the 'political control system' for the USAPop in 2016 as the 'financial debt system' is 'teetering' is also showing as a 'road block' or 'obstruction' to the 'global climate change' agenda. The new data accretion patterns are showing that the 'loss of core stability' within the 'guiding ideology' comes 'unglued'. These sets are showing that the 'funding stream' for the 'climate change agenda propaganda' is going to hit the same 'hyperinflation wall' that the 'populace' is going to experience. But in the case of the 'climate change agenda', the data is pointing to a 'bankruptcy' that will in turn, 'curtail' a 'major (propaganda) publishing effort'. Part of the problem set for the 'climate change controllers' will be the 'unleashing' of a large group of 'whistle blowers' as the 'former employees' of 'professional trolls and shills' will start up their 'own campaign' once their 'checks stop'. These sets are showing that a very strange sort of 'propaganda war' will develop as the '(former) workers' take on 'upper management' in a 'social battle' that will have 'professional politicians' and 'CFR members' publicly being seen 'spitting mad' over the 'releases (secrets revealed)' of 'hidden

information'. Further, these sets are describing an on-going (over several months) 'warfare' on 'social networks' between the 'cast-off trolls/shills' and their 'former employers'. In several instances the data is showing that 'large (corporate) social networks' will be so 'dominated' by the 'real time war (of words)' that the 'upper management' will be 'forced' to 'shut (the hosts) down'. The idea will be a 'temporary breather'. But when back on-line, the 'warfare' will once again be 'so riveting' as to 'force yet more constraints (upon speech)' by the 'management'. The strategy of 'censorship' on the 'hosts' is showing as being 'futile' as the 'battles' will simply be 'shifted' to 'yet another outlet'. In some cases, the 'warfare' will draw so many 'followers' that whole new 'network hosts' will appear 'JUST (single purpose)' to be the 'battle field'. Problem with this is that the 'government' will then be 'stepping in' to 'try' to control the 'freedom outbreak'. Note that the data shows that the 'psychiatry practitioners' will be 'used by government' to 'declare (the debate/on-line war)' as 'socially unhealthy' as they are 'shutting down various sites'. Of course, many new sites that will be 'off-shore' will also be set up and then the data shows that for a very brief period (before other crises intrude), the 'government' attempts to 'filter international internet access/use'. This is showing as 'failing' within minutes, but being so 'crushing' a 'burden' on government itself as to have the 'lines re-open' within 12/twelve hours.

A number of new sets have cross links over to the 'extreme heat' sub sets of the Terra entity. Within these cross linked sets the primary supporting sub sets are going to the idea of 'infrastructure failure' in 2016 and its impacts on the population. The 'infrastructure' definition in this case is broad as it includes both the physical resources, and the abstractions of 'finance and funding'. In these sets we find forecasts of 'hospital system failures' that will require 'federal government intervention', and in other cases 'local take over (of the facilities)' as 'out of state hospital owners vacate' due to 'developing conditions' related to both the 'extremes of weather/climate', and the 'breakdown' of the 'credit purchasing system'.

The 'breakdown' and 'collapse' of the 'health care and hospitalization system' is indicated to have spill over effects in both 'local' and 'national' politics. In the case of the 'local' impacts, the data is forecasting that in some areas the 'abandonment/collapse' of the 'local hospital' will cause 'break-away actions' on the part of 'local residents' who will be shown 'nationally' as they 'seize' the 'local resources' being 'destroyed by out-of-state corporations'. In several areas in the data there are descriptions of 'strange stand-offs' between 'armed state police' and 'armed local police'. In at least one instance the data sets have 'mutiny' attached to the 'state police' in their 'response' to 'deteriorating local conditions'. In this instance the supporting sets show a 'weather crisis', and the 'urgent needs (of local, infirm) populations' will be the 'driving force' to cause the 'state officialdom' to 'mutiny' against 'federal mandates' as the 'risk to life and health' will be 'exceeding' what the 'local population' can bear.

More mundane forms of 'crash' will be seen in 2016 as the 'extremes' of 'climate/weather' will be shown as the 'cause' for the 'breakdown' of 'long stretches' of 'roadway'. In these sets the descriptors indicate that the 'heat' will have so 'softened' the 'road surfaces' as to cause 'officialdom' to 'forbid passage' due to 'long lasting damage' to the 'road' itself. They, the local 'officialdom' will apparently 'discover' the 'problem' after the 'stranding' of 'drivers' as their 'vehicles melt into the road way surface'. The supporting sets are filled with 'tires popping' language, though it must be noted that this seems to be more of a generalized effect as the geographic references are wide and dispersed throughout the South West USA.

Yet more instances of the 'crash' language at the mundane level show as actual 'car crashes' which are being described as 'atypical' and 'getting national attention' as the 'weather' produces 'sun blindness' and other 'odd effects' which cause 'multiple vehicle crashes', and 'bizarre single vehicle crashes' all across the American south from Florida (with at least a small instance also showing up in Cuba of all places) to California. In many of these 'costly crashes' the media will at least get the idea that it was the 'sun' as opposed to 'climate' that was the 'causal agent'. Many of the detail sets show such temporal markers as 'chickens (scattered across) the freeway', and 'trucks (overturned, loads spilled out)', and 'cars (dangling) off bridges, people frantic'. This last is yet another instance of 'rescue language', and has details going to some very brave 'local citizens' who will be 'video recorded' as they 'scale down at impossible angles' in order to 'put ropes on' and 'successfully rescue' some 'children/parents' trapped in a 'swinging, dangling van'. Some of these 'crashing cars' sets are seemingly indicating that many 'desperate people' will be 'trying anything (including insurance fraud)' to 'get out (from under financial pressures)'.

In some of the supporting sets we find that 'sun damage' to 'camera lens' will also be reported en masse starting in 2016, likely in late summer. In these 'blind (digital) eyes' sets there are sub sets going to 'court cases' and other 'legal matters' across the South East of USA being impacted as a number of 'dash cam recordings' are going to show up as 'spoiled' due to 'solar effects'. In others instances of what is a wide meme that will be affecting humans for a number of years, the 'sun blinds digital eyes' sub sets are showing that 'mainstream media' will also be 'severely affected' as their 'visual offerings' will be 'deteriorating' along with their 'intensity to cover (the sun damaged camera stories)'. The data is indicating that the 'sun damage' to 'cameras' of all kinds will include 'street monitoring cameras' in a number of countries beyond the USA, but in the USA Pop we do show more 'reported security concerns' being 'aired publicly' by 'officialdom' as they 'scramble' to 'respond to the threats' to their 'digital monitoring infrastructure'.

The 'infrastructure failure' sub sets show that 'weather (including SE storms)' will be 'devastating' to the 'physical infrastructure' of 'electrical systems', and 'road ways', and 'canals' in both Spring and Fall in 2016. Very 'major storm systems' will be impacting the 'east coast and 'interior south east' of the USA over 2016, especially in Fall, in ways that will produce 'images' of 'waste lands' left behind by the 'horrific winds' and 'over whelming storm surge'.

Besides the pummeling that the population will be taking on the 'global warming issue' over 2016, the data sets are showing that a program will be put into place to begin to make the populace afraid of 'china in space'. The data is forecasting a subtle, and likely very long lasting, linguistic effort being made to start bringing 'china' and 'space' and 'fear' together in the limited consciousness of the American couch-animals for 'future use'. The hints within these new sets are that a concerted effort has begun to 'mold' the 'awareness' of the 'chinese threat' from 'space'. We should be able to ascertain that this is definitively in play (later in 2016) when the language shifts over to 'what are "they" up to, up there?' or words to that effect, especially if heard from any top tier politicians or their stooges. While not a 'crash' program per se, the underlying base of high 'urgency', and high 'intensity' language associated with these sets makes this forecast area a big hmmm??? as to 'why' this much (in our immediate future) effort? And why now? It may well be, as these first data sets seem to be hinting, that the USA officialdom will be using the 'chinese in space threat' to 'take the edge' off their 'many' and

'mounting failures' occurring within the USAPop. At that point in modelspace where the 'chinese space threat' shows, we also find a background within the USAPop of so many 'crashing systems' as to be indicative of 'unfolding chaos' and 'loss of officialdom control' (at least at the larger, national level).

Part of the 'crashing systems (here in USAPop)' include new linguistic structures showing that 'new water wars' are going to emerge in 'california', and 'nevada' and other south west states as the 'arid index (places suffering deep drought)' grows to new all time highs. The data sets are indicating that actual 'fights' and 'gun battles' will 'erupt' in some parts of 'california' as 'neighbors' take the 'water restrictions' and the 'enforcement' to the streets with 'weapons'. In some of the sets, there are also descriptors for 'battles' between 'neighborhoods' and the 'police' and 'government/officialdom' over the 'use of water' that will be deemed 'excessive' and 'illegal'. In several of the sets are indications for 'long term legal battles' as well as 'intense pressures' on 'state (and local) government/officialdom' to 'provide water'.

Other sets that are affective of California in particular include several new lexical structures indicating 'spreading' of both the 'concern/worry' as well as the 'real frightening problems' of the methane release. New sets are suggesting that a series of otherwise 'mild earthquakes' in the area will be associated with 'yet more (methane) release' as the 'bite the bad air' meme takes a 'firmer grip' on the area. The data sets are also suggesting that the first 'acknowledged' in the mainstream media 'migrations of people' out of the 'affected areas' will be showing in 2016. These are indicated to 'escalate' to the level of msm coverage in depth (due to some recent event at the time) just as the 'hyperinflation' process becomes 'active'. This would seem to suggest that perhaps mid June or later would be about the time of the next series of 'escalations' in the 'bad air biting' meme. As a part of these sets we find that cross links show that the 'deadly heat' discussed in the Terra entity will also be participating in the 'bad air bites' as some people will actually be 'gassed to death' in their 'sleep' due to 'heat wave' and 'inversion layer atmospherics'.

The perceived 'sudden' nature of the 'global derivatives crash' and its impacts on the 'federal reserve' and the 'economy of the USAPop' are forecast to cause 'rioting', and other 'revolutionary acts' in 'cities' all across the USA. This is forecast within the data sets for later in 2016 JUST as the 'fracturing' of the 'political system' also is indicated to reach a 'visible breaking point'. The combination is forecast to create the conditions for 'cessation' of the 'funding (of local and state) politicians' as the 'national parties' come under 'attack' such that 'local supporters' will be 'refusing to give donations'.

The 'donations' will be 'drying up' at the same time as the 'cessation (crash)' of the 'just in time distribution system'. The 'population reaction' to the 'empty shelves' are showing as being 'totally unexpected' by 'officialdom' and by the 'political parties'. While the data would seem to suggest that 'officialdom' was 'prepared' for 'riots', many of the 'other revolutionary acts' will 'take (the) established power structure' completely 'by surprise'.

New set growth of both IM and ST data in the 'fights for food' sets so long forecast (from ALTA in 2003 →) are now showing that the 'food riots' are forecast by modelspace growth to begin in 'Spring (as early as late March)' in some areas and to become something of a 'floating event' across the national 'scene' over all of Summer with escalations toward 'national (days of) action' in early Fall, with

modelspace indicating perhaps as early as September.

Much of the new growth would seem to be suggesting that it will be 'summer riots' and 'thirsty, hungry, hot, sweaty mobs' who will be 'causing' the 'breakdown' of the 'policy enforcement infrastructure (aka 'police')'. These 'hungry mobs' have been showing in data since late 2003, with sets from 2006 indicating that in 2/two instances of 'food riots', the 'spill overs' will be into 'military intelligence compounds' as the 'mobs' will be 'tearing down' the 'back fences' of 'military installations' under the group-think of 'food' behind the 'security fences'. Basically the data sets are describing a riot in an 'urban area' in a city near enough to Washington DC to have a sizable 'defense sub contractor' population. In the detail sets are descriptions of 'mobs', that will 'happen' onto the 'bank fence' and perceive it to be a 'food warehouse compound'. As they will be at the back of the 'facilities', the data sets are showing that the 'security forces' are 'taken unawares' by 'rampaging mobs' and 'swept away' in the 'human wave'. Then the 'arms' of the 'mob' will 'break into' a 'small building' only to discover it to be the 'top' or 'access' to a 'treasure trove' (so they think) of 'food', and that is where the data suggests that the 'fat hits the fire' as 'deep level security forces' are being forecast to 'open fire' on the 'down pouring mob' and thus starts 'American Revolution 2' (more or less).

The LT values are clearly indicating that a multiple generation impact will result from the 'liberated documents' which will 'survive the looting' and the 'deadly skirmish' with the 'armed security forces'.

There are huge ropes of cross links from these sets within the USAPop and the SpaceGoatFarts entity. Both as originating, and terminating sets. The implication from the data growth patterns alone is that a 'major, life changing event' is pending. This is also confirmed by the emotional sums within USAPop which are higher than those we first used to forecast the 9/11 attacks in June of 2001.

Many 'individual lives' are also forecast as changing as a direct result of the 'government (officialdom) response' to the 'dollar wobble' in early Spring (northern hemisphere) 2016. The data sets are showing that such a 'flood' of 'applicants' for 'every conceivable form' of 'US federal government assistance' is going to produce 'breakdown conditions' across a wide range of 'federal agencies'. These include such as 'FHA', and 'VA', and any agency at the federal level which is involved in 'monthly support' for any reason. The data sets are showing wide spread 'breakdowns' of the 'payments distribution systems' just as the 'goods distribution system' is also 'crumbling' and 'lurching' just before 'crashing'.

The data is also forecasting that the various 'state agencies' which are 'front pieces' for 'federal largess' will also be 'overwhelmed' by the 'sheer number' of 'applications'. These include 'disability programs', and all manner of 'health and human services' forms of 'programs'. The driving issues showing in the data are the 'crashing economy' forcing yet more people out of the workforce, at the same time that the 'computer systems' of the 'government' becomes strained 'to the limit' of its 'human handlers'.

Other problems are showing as 'besetting' the 'crumbling government' as a series of 'scandals', mostly about 'stupidity' and 'gross incompetence' will emerge from within the upcoming 'dollar wobble' and 'crisis dance'. Specifically there are sets showing that a large number, perhaps tens of thousands of 'foreclosures' are going to be 'prosecuted' by 'banks' who are 'agents of the 'federal reserve'. The issue showing is not with the foreclosures, as indeed, apparently no payments will have been found to have

been made for some significant period, but the punch-line to this universe-joke, is that the data is forecasting the 'federal reserve bank' to be 'foreclosing on itself'. The idea is that the 'chain of ownership' for 'property' is now so totally screwed up that it will take months for the 'federal reserve bank' (or its proxy) to realize it is 'foreclosing on its own properties'!

Many other 'signs of collapse (crashing government)' forecast to manifest over late Winter and through Spring of 2016 include the 'failure' of 'food inspections' such that many 'weeks' of mainstream media airtime will be 'totally food contamination stories'. Further problems will surface (actually) in 'submarines' which will be 'beset' by 'electronics problems' directly related to 'corruption (within) the inspection system involved'. Further issues for the USAPop 'ship going' population will involve very 'extreme cases' of 'food borne illness' that will require 'air (from sea) rescue' which will be on video and part (later on) of the 'incessant coverage' of the 'food crisis'.

The long forecast appearance of the 'tribes' of 'building demolition (looting) travelers' is apparently also closer as the new sets growing in support of these sets are showing up in the immediacy data. These new data sets are forecasting that the early temporal markers for this meme will be seen as a 'mall' will be 'sold for demolition', (and apparently demolished), by 'parties' who did not 'own it'. This 'scam' is showing as being a major part of the 'defense language' which will appear when a 'group of demolition contractor employees' will be 'arrested' after something of a 'brawl' with 'local police' in a 'near rural area'. It will turn out that the 'mall' was 'long abandoned' and basically 'sold for scrap' in a 'more or less legitimate' deal in which the 'contractors' will be 'also victims'.

The 'blatant lies' of the Federal Reserve and its individual 'spokespeople' are showing up as being 'topics of discussion towards prosecutions'. The data is just referring to the 'talk' about the possibility of 'criminal suits', not the actual events. In the new sets we have a number of linguistic structures that contain language about 'federal (reserve) officers' who will be facing a 'strange choice' that may be the option of 'trial by jury', or 'trial by mobs'. This latter is showing due to other sets that show 'attacks' on the 'well known faces' of the 'unfolding depression' when they 'show in public'. These sets include specific references to 'mobs swarming cars', and 'police (escort motorcycles)' being 'pushed over' as 'mobs swarm across the roads' to 'vent anger' on these 'public faces of greed'. Other aspect/attribute sets show that 'shit (small brown bags of feces)' will be used as a 'public weapon' upon these '(more well known) faces' in 'restaurants' and at 'public speaking events'. These latter will include a number of 'political events/rallies'. In many of these cases, 'video' will be later available as the 'cause' of 'shit flinging' will itself become a 'well imitated act'. Of course there will be attempts to make 'shit flinging' a crime, but all of these are indicated to either be 'laughed down', or 'struck down' due to 'conflicts' with other laws.

As the 'public anger' grows during the 'dollar crash' following over 2/two months of 'dollar wobble', the 'federal reserve' is described within the new data sets as becoming both 'hated' and 'reactionary'. This latter set is characterized by repeated aspect/attribute sets going to the idea that the 'federal reserve (employees)' become 'violent' and 'aggressive'. These sets have supporting sets that suggest that many videos will be posted of 'oppressive' and 'dehumanizing' tactics being employed by 'federal reserve police' as they 'over react' to the 'continual (and growing) threat levels' against their 'employer'. The data sets are suggesting that the 'stress' and 'bad attitude' of the 'federal reserve police' will be so

extreme as to prompt a 'battle' with 'other police' who will be 'mistaken as raiders'. At least the data says that this will be the 'proffered explanation' to the public for why the 'federal reserve police' were 'on video' and seen 'fighting with uniformed officers in the streets'.

Other 'fights' are going to emerge from the 'crashing dollar' and its prompting of the 'fracturing of the political system'. In new sets we have forecasts of instances where 'maker fairs' will be 'discovered (to have been) infiltrated' by 'agents (of the federal government)'. The idea at the top level of these structures, is that the 'federales' will be getting a 'big dose of fear' over 'how quickly', and 'how widely' the 'spread of technology' has grown. The data suggests that 'enforcement agents' will be 'sniffing around' in the 'maker communities' seeking to 'uncover bad behavior' that 'may threaten (the elites)'. These sets are also extensively internally cross linked over to other sets showing how other parts of the 'federal government' will decide that it is 'appropriate' to 'pump money (into) self-educating hobbyists' as the are 'mostly all kids', and this 'represents the cutting edge of the future'. Just as in the case of the 'self-defeating foreclosures', the 'maker fair busts' will turn out to be 'one branch' of 'government arresting another' and all for 'imaginary crimes'.

The 'crashing dollar' and its 'slap upside the head' to the USAPop (those who do not read these reports) is showing as producing a number of very beneficial results. These effects will be both 'embryonic', and 'growing' over 2016, so likely we will not see much 'visibility' in any broadcast media, but the data sets are suggesting that the 'fright/fear/scare' that comes with the 'crashing dollar', and the 'cratering (ability to live on) debt/credit' does cause the 're-emergence' of both the 'american work ethic', and the 'yankee trader' mentalities. Note you will likely have to hunt for this in the 'chaos' of 'social disintegration (apparent)', however the data is forecasting that by 2020, both trends will have 'become robust' and 'maturing' as the 'american (as a sub set of the global) renaissance' begins to get its 'legs under it'.

Of course it makes sense that the 'horrors' of the 'crashing dollar' and the 'crushing (of the central bank system)' will be the 'primary reported' meme, but there are many indications that the 'growth' within USAPop, and the 'significant changes' to the 'national identity' will be all 'underground' while the 'power structures' are 'falling' like a 'rain of bricks' on the 'social political landscape'.

The sets within USAPop that have been forecasting the 'brown-outs' are still gaining new growth and seem to be indicating that 'electrical services rationing' will be a part of the 'background pressures' as the planet moves into Fall (northern hemisphere). This would seem to relate more to 'finances' than actual 'fuel shortages', however the result will be a 'redistribution' scheme proffered by the 'officialdom' which, once again, is showing as causing far more 'lack' than 'surplus'. Basically the 'redistribution plan' is a blatant 'prop' for several 'very rich areas' and 'large commercial operations' rather than an effort to 'fairly allocate' the 'scarce resource' as will be 'touted' by the 'politicians' who will offer the plan. It shows as being a 'non starter' as 'events' will be 'racing ahead' of the 'ability of officialdom to react'. But the 'redistribution plan' will be a 'central pillar' in a 'propaganda campaign' by the 'elites' who will be 'caught off guard' by the 'viral backlash' on social media. Yet again another instance of where the 'elites' have 'lost the information war'.

The 'breakdown' of the 'electrical distribution' system at a national level is to be affected not only by 'lack of financial' and 'actual resources' but also is to be impacted very severely by the upcoming 'earth

expansion episodes' and the subsequent impact on 'terrain', and 'climate', both of which will 'induce' new 'population movements' which will also affect 'electrical service demand'.

The data sets within USAPop that are cross linked over to the Terra entity are indicating major land mass changes over these next 10/ten years, with 2017 being a 'near term peak'. These changes are forecast to influence the 'diaspora', as well as to 'reshape living patterns'. In some of the sets, whole 'populations (towns/suburbs)' are shown being 'dislocated' in 'abrupt (middle of the night)' shifts as the 'earth beneath their feet' will 'actually sink away'. Other areas are showing that 'buildings (fall over)' and 'roadways disappear (underwater more or less permanently)'. Many other 'earth expansion caused problems' will be showing up in 'new areas', most notably, the 'central US (river valleys)' as the 'under plate pressures' will 'change (over several months)' in 2016 (most likely visible in late Summer, most likely most visible around the Mississippi River, the lower one third).

New growth in the 'popping' of the 'stock market bubble' sets is increasing at a very rapid pace as the 'money velocity' and 'credit creation' both 'crash' to 'never before seen levels' as the 'derivatives' system start 'coming apart' as the 'systemic movement (is) downward'. These sets have support that shows that the 'dealership (cars) lines (of credit)' are 'collapsing' to 'levels never before seen'. These sets are showing that the 'rate of bankruptcies (within auto dealerships)' will 'increase' to nearly '99%' over these next 10/ten years.

The 'destruction' of the 'credit system' and the 'inability' and 'unwillingness (of the public)' to 'take on new debt' is showing up as being the 'initiator' of a 'crash' in the 'student loan system'. As these 'student loan system banks' are 'going under (with no rescue)', the data is showing that the 'universities' and 'state colleges' and 'private educational institutions' all begin a 'chain collapse'. These 'education system crashes' ripple through the various 'states' the 'state governments' will be 'pressed' to 'step in' and 'make the system whole'. This is the 'nail in the coffin' as far as temporal markers and the 'crash' of the 'school systems' across the USA. The 'knock on' effects of the 'crashing banking system (and its pulling the plug on student loan)' include 'student riots', and all of the forecast effects from the last few years of the ALTA reports.

The 'riots' language also include many sets that go toward the idea of 'seventy-five (to) one-hundred riots' here in USA over 2016 (likely post Summer) as the 'economic conditions' become 'dire' and the reactions of the 'governments/officialdom' involved become 'vicious'. The data paints a picture of 'default' at a level that is simply not-yet-defined as it will come-to-mean in the future of 2017 onward. The data sets are showing that the 'vicious response' of the 'officialdom' to the 'peoples' responses to the economic degradation is showing as being a 'shock' to the 'view of the system (by the people)'.

The data sets are showing that the 'blow back' to the 'destruction' of the 'economic system' is going to include a 'make-a-way' movement in which the 'population (of) gardeners/farmers/builders/makers' will be 'taking (new) places' in the 'social structures'. The data sets are showing the 'development (spontaneously)' of 'new educational systems' as "those who know (how to)" become 'sought after teachers' for the 'under educated generations' who will be 'suddenly (forced)' on their 'own resources'...which they will find 'greatly lacking'. The data sets are showing that 'radical, urban, homesteaders' will become 'instant celebrities' and 'social power figures' appearing across 'cityscapes'.

In some of these sets the data is showing a 'reversal of roles' in which 'local powers (urban farmers)' are 'sought out (by politicians)' who will be 'seeking power (where ever they may find it)'. These sets are also showing that a 'new college' structure of 'real knowledge bases' is going to 'replace' the 'officialdom academic system' which will turn out to have been 'only propped up' by 'corrupt banks'.

CanadaPop

Well, the data sets are showing that the Canadian 'housing bubble pop', both 'long awaited', and 'long delayed' is going to 'crash into' the 'political aspirations' of the 'establishment' over late Spring. A number of new sets are forecasting a 'reported crash' of the 'housing prices' as what had been a 'touted' and 'hopeful listing season' is also indicated to 'crash' into the reality of the 'deepening global depression'. In spite of much mainstream media attention, the 'prime housing markets' in Canada are indicated to be 'lacking shine' and 'failing to impress'. The 'illusion' of the 'endlessly growing (upward) property values' is also shown as being 'destroyed' by 'price contractions' affecting a number of 'major (within Canada) housing markets'.

The data is forecasting the 'canadian officialdom' to 'react badly' to the 'falling property values', and the very soon resulting crash in 'tax receipts' and 'property transfer fees' will show why there was such 'expressed concern'. The relative 'prices' of 'canadian houses' are showing as 'falling' in spite of the 'increasing hyperinflation' of the 'canadian dollar'. The 'tax crash' of 2016 for the 'canadian officialdom' is forecast to precipitate a 'tax revolt' either late this year or early next year as the 'frantic governmental officials' will be 'up nights' going over 'old records' trying to 'get every dollar possible'. The data sets are showing 'protesters' will be 'revolting over treble tax'.

AustraliaPop

The data sets for the down under population is showing that a 'knife' has been taken to their 'housing bubble'. The data is forecasting a 'run-away balloon effect', and not a 'gentle let down'. These sets are also indicating that the 'carnage' of the 'Oz housing crash' is going to 'lay waste' to the 'state bonds'. This in turn is forecast, by late Spring (southern hemisphere) 2016, to have ramifications within the 'political system', as well as the 'ability (to sell) state (and sovereign) bonds'. Of all of the 'housing bubbles' in the western world, the Australian 'housing bubble' is indicated to 'deflate' at the 'steepest rate'.

SaudiPop

Also showing as 'falling' is both the 'economic' and 'political' fortunes of the 'house of saud'. The data sets are indicating that the 'military misadventures' will be 'catching up to' the 'elders' of the 'house of saud' as a series of 'mistaken understandings' will lead to 'shocking military failures (defeats)'.

The data is showing that language around the idea of 'everything (just) stuck together', and 'the next thing we knew, (the building) was crumbling' will be coming out of the 'surprise attack' on the 'soft

underbelly' of the 'saudi regime'. The data sets are showing a 'rout' that will have a 'last minute evacuation' of 'smoking cities' as the 'elite flee' with 'what ever they may carry away'.

Markets

Both the immediacy and shorter term data sets are showing that a 'rush upward' in the 'dollar price' for Bitcoin will be a part of the forecast March through April 'financial system dysfunction crash'. There are data sets with a bespoke 'one thousand and forty five dollars' as the purchase price for Bitcoin before the 'hyperinflation' word gains its serious growth in mid July.

Much of the 'hyperinflation' language is also tied to sets indicating that 'msm propaganda' will be 'wailing at china' for the 'crashing' of the 'precious metals “markets”' in the 'west'. These data sets are showing that 'bankruptcy' at levels not previously 'understood' will be 'pouring out' as the various 'commodities “markets”' that are based on 'paper abstractions'. As these 'new bankruptcies' hit the 'paper wall (of debt)', the data is forecasting that the 'grasp' of the 'true extent' of the 'rot (corruption)' is going to be 'itself (a story)' that 'feeds pricing volatility'. These 'corruption bankruptcies' are also showing as 'taking (out) national politicians' as their 'personal funding (vanishes)'. Other sets cross linked over to the USAPop are showing that at least 2/two 'former politicians' will be 'abruptly leaving the country' for 'extended trips overseas' just as the USAPop is getting 'interested in their finances'.

As part of the 'hyperinflation' lexical structure in the Markets entity, the new data accretion shows that the 'silver to gold' ratio will be breaking '25 to 1'. These sets accrual patterns are indicating that the move in the ratio will be starting in March and will cross the 25 to 1 point before the 'hyperinflation' becomes 'official' in July of 2016.

New data growth in sets for the 'dollar decay' are showing that March and April will be 'impacting' on both the 'perception' and the 'value' of the 'Federal Reserve Note (aka dollar)'. The 'dollar' as a 'relative value' is forecast by the new sets to (by the time we reach the end of March) already be in 'the shakes' or 'oscillations' in which 'daily values' of the 'dollar' in terms of other 'paper currencies' will be 'shifting' in very wide 'swings'. The data is showing that in some areas of the planet, there will have been (by end of March) some countries where their 'currencies' will have been swinging over 50% in 'relative value' to the 'dollar' on a 'daily basis'.

As the new data has accrued to the 'us dollar/federal reserve note' sets, it is impossible to miss the very large number of references to the 'cross over day'. This is being shown as the day when the 'price of gold' in 'dollars' will 'surpass' the 'price of the Dow'. That the data for this descriptor is appearing within the shorter term value sets is a very good indicator for it to also manifest in the broader range of the short term data. By this it is meant that the first few shorter term values for a linguistic structure have meaning as it points to a temporal shift to more near future for the manifestation of the cited linguistics. So, while still early days in the global meltdown, it is worth noting that we are getting the confirmatory shift of values from longer term into shorter term sets within some very key financial and political linguistic structures.

Recent additional data has come in to the 'island nation' that will 'adopt bitcoin'. These new sets are forming a bifurcating set for 'a sovereign state' that will 'adopt bitcoin' in a 'desperate (and successful) attempt' to 'get out of deflation/hyperinflation'. This 'break' in the 'fiat club' is showing as being 'a successful currency experiment' as early as May, 2017.

Other indicators for 2016 show that the 'crash (of) fiat currencies' progresses from the first 'wobbles' in March and April through to the 'emergence of hyperinflation' in July. The 'hyperinflation' is showing as a direct result of the 'complete (and) total cratering' of the 'energy market (earlier in March)' that will precipitate the 'largest ever (private) bond default(s)'. These 'defaults' are seen within the data from early February in increasing flow until about mid March when the 'rate of failure' reaches 'epidemic' and 'system threatening' levels. It is at this point that the data is showing the 'desperate' and 'emergency' words will be repeatedly heard in articles about the 'Federal reserve SYSTEM' itself.

These repeated instances of 'crash' showing up in the sets in support of the 'dollar' are ALL focusing on the 'derivatives' and the 'cross (risk) party failures' that will be 'erupting (from) SE Asia'. Many of these sets are also directly held within the many other fiat currencies sets. All of these 'derivatives' sets are also showing as being the 'bare belly', or 'exposed flesh' of the 'banking system'.

Not only the 'banking system' will be 'in play' over late Feb through the middle of May, but also the 'global insurance industry' which is apparently also 'balls deep' in 'derivatives meltdown'.

Although mostly based in the USA Pop entity, the 'price controls' sub set also has a large set within the Markets entity, and is indicated by the data sets to first appear as a 'markets disturbance' which will be 'derivatives related' and then results in 'governmental imposition' of 'price controls'. While an attempt to 'shoehorn' the 'hyperinflation' away from 'foods' and 'necessary medical supplies' the data sets are explicitly providing forecasts that these areas of daily life will indeed be hit very hard by the hyperinflation.

As the hyperinflation is just taking off over Summer (northern hemisphere), the data is showing that 'heat damage' and 'sun damage' to 'surveillance cameras' (including expensive military (and police) infrared (heat viewing) 'assets') will be severe enough to start a chain of problems from 'funding' of the 'required upgrade' to the 'street cams' installed over these last 20+ years, to the actual 'camera lens' and 'digital (light processing) circuits' at a physical level as they are reacting to 'unforeseen (levels) of solar radiation'. {ed note: more of our 'unknown energies from space' long held in the data} As the data sets show the 'crashing' of the 'street monitoring systems' around the planet due to 'solar damage', there are also a number of supporting sets both directly held and via cross links to other actual 'crashes' of vehicles that will NOT be recorded and this will in its turn cause a 'crash' in the ability of local 'road way jurisdictions' to cope with 'claims' against them for 'lack of evidence' and other associated legal ramifications.

Other supporting sets for 'digital surveillance infrastructure crash' include new and heavy growth in sets describing 'governments' going to 'great lengths' to 'persuade' their 'populations' to 'support' the 'emergency funding requests' for the 'upgrade' or 'replacement' of the 'old surveillance system'. Of

course it is all in the public good. Wink, wink, nod, nod.

New growth is continuing in the sets for 'dollar dumping' by 'foreign holders' all through the first months of 2016. As may be expected, this is showing as causing a 'crash' in the 'dollar (purchasing) value'. The data sets are now growing for a 'threshold cross' in which the 'dollar dumping' will have 'direct impacts' on the 'national economy' and not be restricted to the 'financial overlay' to 'real activities'. The data sets are showing that this part of the over all 'systemic crash' will be at its earliest visibility in late March, so my interpretation is for these sets also to be forecasting a chaotic period in which not only the 'derivatives' and their 'underlying (debt) assets' are 'coming apart', but at that same time, the 'federal reserve note (aka 'us dollar')' will start to 'crater'.

As the 'dollar dumping' reaches its forecast point of 'direct impact' on the 'base economy' of the USAPop in the first few days of Spring (northern hemisphere), the data sets are indicating that the USAPop will 'experience' something that will be 'totally unexpected'. It would appear that the data is forecasting that the 'unexpected will occur' due to 'how' the 'dollars (are) repatriated'. In this case, the data sets are showing that the 'federal reserve' will 'digest' the 'incoming dollars' in such a manner as to 'render them harmless (no impact)'. Or so they think. The accretion pattern indicates that the 'disappearing dollars' at the 'international level' will have an 'unforeseen consequence' of 'removing velocity' as well as the 'reduction (of) dollars' that are 'circulating' within the 'USAPop economy'. So the data sets are showing that the 'disappearing dollars' actually will contribute to the 'crash' of the 'production/service economy' in the USAPop as 'dollar circulation rates' fall to 'all time lows' (relative to the size of the population).

The 'run away (from the dollar)' will be the 'proximate cause' for the 'initiation' of the 'hyperinflation'. The data is showing that the 'sudden (and increasing) slowdown' in the 'rate of business' within the USAPop will produce a situation in which the 'Federal Reserve' as an 'institution' is very 'suddenly' under the 'total focus' of the USAPop in a very 'threatening manner'. These data sets are NOT showing any 'politicians' being part of the 'piercing (gaze)' being placed on the Federal Reserve. In this case (as in all others) the politicians will be 'following' the 'leaders' who are being forecast to 'rise up' from within the 'angry mobs' that are 'gathering around' the 'shivering (bare naked) legs' of the 'federal reserve'. Other related sets are showing that many parts of the 'federal government' (at the civil service level) will be in the 'background' of the 'growing fury' over the 'financial system implosion'.

The data sets are also indicating that 'international protests' will emerge in 'support' of the USAPop and the 'street actions' and other forms of 'national protests' that will be 'grass roots organized' against the 'federal reserve' and its 'crony capitalism'.

At the international level, the data sets are showing that much of the 'protest' comes from the 'failure to pay' on the many forms of 'derivatives' that will be 'dying daily'. The data is showing that the 'failure' to 'deliver' on everything from 'insurance (swaps)' to 'gold deliveries' within the 'western (banking) system' is so severe as to truly warrant the use of the word 'crash'.

In the new sets are growing trend pointers for 'brutal' levels of 'failures' in the 'derivatives' such that whole 'towns' and 'regions' around the planet will 'wake up' to find themselves 'encountering

bankruptcy' in some major facet of their 'daily lives'. These are indicated to include the 'shutdown (failure)' of 'water' and 'sewer' plants/systems, as well as 'banks', and 'telecoms' and 'bakeries', and many other 'vital services' .

In some of the 'international' sets related to the 'derivatives failures' are new sets for 'credit failure' that will 'choke off' the 'funding' for many of the 'small towns (villages)' which are 'trapped' in a 'top down funding method'. These sets are pointing to 'city (municipal) workers' who will 'be without salary' as the 'credit system' hits a 'deep ditch' and 'crashes'.

New sets in the 'transportation (of goods)' is indicating that the 'breakdown' of the 'global trade system' is going to produce 'scuttled ships' all along the 'coasts' and 'near ports' as the 'cost of continuing (to own)' the 'vessels' will reach a 'critical mass'. These sets have longer term values indicating that some 'wrecks' and 'abandonment situations' will produce 'housing sites' where up to 5/five generations will live. Other sets are showing that 'scuttled cargo vessels' will be 'drifting problems' for 'local coastal dwellers' who also will be 'without funds (or means)' to 'clear the obstacles' due to the same 'frozen credit system' that caused the 'trade collapse' that sent the 'ships' off to 'become wrecks' and 'hazards'.

The 'rapid' and 'visible disintegration' of the 'international dollar infrastructure' (including World bank et al), is showing as 'accelerating' across all 'fronts' in the 'currencies wars' to the point that the global 'competitors' to the 'IMF, WF, BIS, et al' will be 'in charge of international settlements' by the end of 2016. Not that this easy statement is meant to imply a smooth transition. In fact the data sets are painting a picture of a 'big', 'foul smelling', 'pile of trash', as being accurate descriptors for the 'breakdown of the financial settlements systems' globally as the 'federal reserve dollar' goes into 'wobble' mode.

The 'dollar wobble' will also cause a 'goods crisis' in very odd manners. One of these is forecast to be 'corrupted data' in which 'data mining' is affected by 'increasing corruption' due to 'model (projected) data' getting into the 'input feed'. This is further detailed in several sets that show that while 'real economic activity is slowing down' across the globe, the 'algorithms' that 'monitor' and 'control' many parts of the 'global inventory process' are not going to be aware that the 'new incoming data' is 'outside' of the 'designed constraints'. This is showing as creating 'bizarre' and 'sudden' forms of 'product inventory misses'. These will include some instances of 'way too much inventory', and in some other instances, highly visible in the mainstream media, the data has 'acute shortages' of 'vital items' will be 'main stories' across the 'markets globally'. These sets are indicating that what we are seeing the near term future will be the 'spread' of the 'global toiletries shortages'. Many of these 'shortages' will be 'humorously portrayed' in the mainstream media. Our new data shows that the mainstream media will be slightly less 'amused' when their own 'shortages' and 'product contamination crises' cause 'production problems', and 'employee ill health'.

The processing of the data in the last few days has seen a new trend developing within the 'housing' markets, at a pretty much global level. These sets are showing that a 'flood' of 'houses and property' will hit the 'for sale markets' over these next 2/two months, THEN the 'housing bubble' really pops globally, and that 'flood' of 'new listings' turns into the 'worst nightmare' ever for 'house sales'. The data is forecasting so 'dire' a 'market' that even 'hardened real estate agents' will be 'weeping' over their

'problems' of 'too many properties' and 'NO buyers'. The data sets are showing that the 'end of fiat currencies' will bring a '99 % reduction' in 'volume' over these next 4/four years.

As modelspace is progressed through Summer (northern hemisphere), the data sets are indicating that the 'state and local governments' of all the major 'national sovereign unions' will be 'desperate' for 'cash/funding' for their 'employees', and 'operating costs'. As a result, the data suggests that 'state and local governments at all levels' will be 'raping (the people) through taxation'. The data sets are showing that 'taxes' in jurisdictions such as 'high value florida real estate' will be raised so high as to 'eclipse' the 'costs of selling' the properties. For clarity, the 'taxes' are not going to be more than the property is worth, but they will be very much more than all the other costs of selling combined (by several orders of magnitude). The data sets are forecasting that in some 'jurisdictions' the 'discrepancy' between 'taxation amounts' and 'nominal "market" value' will be so high as to have the 'local population' in 'active tax revolt' including 'withholding payments en masse' by the end of 2016. In the cases forecast in Florida (and New York City, and other areas in Southern California), the data shows language as in 'punishing', and 'brutal' being applied to 'tax levels'. There are detail layers showing that some 'luxury apartments (views and all)' will be 'abandoned' (many already empty most of the year) as their 'foreign owners' will be 'refusing to pay (the taxes)'. The data suggests we will be seeing 'squatters' in high rise 'abandoned apartments'. These new 'occupiers' and their 'activities' will not sit well with the 'paying residents', and 'bad behavior' will result that will make it out to video.

As a 'side effect' of the 'abandonment' of 'multiple million dollar residences', a 'case' of a 'serial killer' and 'sexual deviant' is indicated to be 'solved' as 'possessions' are 'taken (from) an abandoned luxury apartment' that will 'lead authorities' to the 'end of the chase'. The data sets are indicating that video and pictures of a 'staggeringly luxurious apartment' will be part of the visibility of this event. Please note that the press coverage of this event is a temporal marker for 2016. Associated with these sets is the prominence of the words 'deviant' and 'degenerate'.

Other 'side effects' of the bizarre 'popping' of the 'global housing market' will include the 'recovery and return' of some 'real treasures' that had been 'stolen' in China, both from the 'state' and 'private collectors'. However we note that when the 'recovery' takes place, the 'private collectors' will all be 'generously donating' their 'former possessions' to the 'state collections'. The data also is focusing in on the 'very young, smart and aggressive' Chinese 'detective' who will be getting at least some 'western press coverage' as it appears that the 'recovery' will take place in a 'western house (bought with stolen/hidden funds)'. This detective is also indicated to have a 'major career', that will lead to his 're-appearance' within the 'western media' in a much more 'substantial role' some years (maybe 8 ?) later as a 'negotiator' with 'new western powers'.

Still more problems relating to the 'housing bubble destruction' globally will be the 'crashing' of the 'tax base' and the 'illusion of prosperity' in many of the 'luxury (resort) areas'. This, in turn, is showing as producing effects that range from 'near instant (property price) crashes' (which are linked over to 'stolen wealth' being 'recovered'), to 'destruction' both 'planned' and 'criminal (arson)' of 'luxury (abandoned buildings)'.

The 'tax drain (drastically falling tax revenues)' are showing as being 'globally affective', and being

'motivating' factors in some really bizarre schemes by the 'broke governments'. The goal for the 'governmental agencies' will have come down to 'funding or disbanding' as so many of the 'traditional sources' of 'government funding' (over these last 60 years) will 'dry up' and 'drop off' with the 'central bank response' that appears over June and then ramps up to 'near daily injections' of 'more paper' by mid July.

Modelspace does not contain only Markets data this processing cycle, however the forecast impact of the 'dollar wobble into hyperinflation' has kicked all of our emotional quantifiers to the top of their scale indicating that very large emotional as well as actual changes are going to be sweeping through humanity as the 'paper (currencies) abstraction' is 'burnt off'. This language appears to be a key element to what we all face. First the repeated references to how fast the 'force (of the) currencies tsunami' is seen 'ramming through' into 'daily life', and then secondly the many references to 'flame-out', and 'going (up in smoke)', and 'smokey illusions (blowing away)', and others of similar nature all pointing to a very 'swift' shift into the 'new reality' of the 'dying dollar empire'.

The sets are forecasting huge global effects that will alter life-as-we-knew-it forever, and will change the (presumed) course for 'states, tribes, and nations' for 'generations'.

Many of the long term data forecasts from last decade are now converging in modelspace as new growth is moving one set into another and all of them forward as the shorter term and immediacy values appear.

The picture being presented for 2016, especially within the 'dying dollar zone' presents language for extremes of reactions with the 'powers that be' leading the world in becoming 'extremely paranoid'. Other aspects showing are pointing toward the 'radiation sickness' appearing in the 'mainstream media' by way of the 'surprising number' of 'celebrities' who will be 'in ill health'. Note that the mainstream propaganda pressitutes will NOT be making any connections, but the data does show that several sources within the alternative media will be 'tracking and recording' the 'strange sickness patterns' within the 'celebrity cadres'. A to be 'hotly denied (by all in the industry)' connection between 'air travel' and 'death by all causes' will show up that will also bring 'sleepless nights' as the data forecasts 'waning' interest in 'risking air travel' due to 'increasing radiation exposure'. As may be expected, NOT the kind of 'news' that 'corporations (air travel and tourism)' want out there. The data sets are showing that combined with 'crashing economies (currencies)', the 'tourism business' globally falls into 'deep depression'. Other impacts on tourism are showing to include 'wars', 'food rationing', 'civil unrest (in local populations)', 'earth changes', 'failing infrastructure', such that the data sets are forecasting a 'radical change' in the 'global tourism patterns' over these next 10 years that will include 'multiple generations' of impacts on tourism (in some areas). Some of these impacts are showing as 'positive' as many 'local populations' will start to 'return (to near home)' for 'vacations'. Other sets are indicating that 'recreational activities' will also 'blossom' as 'global tourism fades'. There are very extensive cross links from these linguistic structures over to the 'crashing housing markets'.

Other positive focused 'reactions' to the 'global depression/crash' include longer term data sets that are showing a 'resurgence' in 'all things local' including 'local boating (as transport) industries'. These sets are also showing that our 'new tribes' will be emerging from the 'global depression' as 'people react' to

the 'swift (death) of currencies'.

The data sets for both 'silver' and 'gold' continue to gain new values for 'shortages'. These 'shortages' are also showing new supporting sets for 'crashing (dealer system)' within the 'western markets'. The 'crash' language in these sets contain details that go to the idea of 'open auctions' for 'gold' in which 'asian interests' will 'dominate' by way of a 'dollar flood', and end up 'taking all the metals'. The data continues to show that 'time (of) no offer' is coming during the process of the 'dollar wobble' which leads up to the 'hyperinflation' of mid Summer (northern hemisphere).

Within the Markets entity, and as may be expected, the linguistic structures are dominated by the 'banking' sets. Within these sets we find that they are dominated by 'rot' and 'failure'. In some of the sets (most notably those with Italy or Scotland geographic references), we find that 'cross defaults' are going to be the 'curtailing problem'. The data sets are forecasting that a 'mexican connection' to the 'scottish bank' will result in some 'very smelly, rotting haggis'. These sets are reinforcing the idea that a 'derivatives meltdown' will be 'boiling through' to the 'surface' as the 'mexican money' in 'scottish bank' is seen to 'go bad'. Further sets are suggesting that yet another round of 'dead banksters (suicided fellows (and women))' is about to 'erupt' throughout the 'financial world' as 'rot creates gangrene/death' in the '(funds) blood stream'.

There are a number of sets gaining new growth for 'kidnappings' of 'celebrities' (though primarily in the financial arena). Many of these will simply 'fade' from the 'prestigious mainstream media' without any 'reconciliation'. This is in its turn going to be setting us up for something of a WOW story in late 2016 as the 'disappeared' are 'returned' by way of a 'spectacular assault and rescue' of these 'kidnapped people'. The linguistic structures contain language that has 'violent attacks' on 'banks' also happening at the same time as at least one of the 'celebrity kidnappings'.

A curious observation has to be that the data contains numerous references to Malta, the island, and its 'inhabitants' in ways which are suggesting that somehow this 'tiny enclave' will be 'at the epicenter' of the (soon to manifest) up-coming forecast events. These sets are also cross linked to the 'banking system failure' and the 'crashing (of the) paper currencies'.

The data sets are showing a 'contents' between the 'failure' of 'derivatives' which are 'eating the flesh' of the 'large banks' and the 'small deaths' of the 'many businesses' which are actually the 'real economy'. The data sets are indicating a 'plague' of 'business failures' at the 'small to medium' sized operations. These new sets are growing in support of the 'mass layoffs' that will be 'sweeping' through the 'Western economies' as the 'currencies' become 'locked (into)' a period of 'very volatile relations'. The 'volatility' is showing as 'producing huge fortunes' as well as 'bankrupting huge fortunes' as the year unfolds.

The data sets are still growing around the idea of 'national (days of) disruptions in the USA' that first are supported by the 'banks failing' which produces 'weeks of distribution disruptions (globally)', and then later in 2016, the 'american people' are showing as the cause of the 'national (days of) disruptions in the USA'. These sets are also showing (as may be expected) that 'global markets' are 'disrupted' as a direct result of 'financial (and then social) chaos' in the USA.

The data sets growing now are forecasting that the 'global markets' are going to be 'shattered' by the 'social chaos' in USA. The details are showing 'marches' of 'hundreds of thousands' through Manhattan with 'major damage' to the 'buildings (along the way)'. Further sets are pointing to 'street battles' between 'marchers' and 'law enforcement'. The data sets are showing that the 'street battles' are a 'growing phenomenon' after the 'national (days) of protests/disruptions' later in the year. These also are indicated to be 'negative' on (what remains) of 'financial markets'.

SpaceGoatFarts

Much more language about 'time travel' becoming a 'discussed (in near real terms)' item by the mainstream media presstitutes. The data is also indicating that the 'time accidents' forecast in previous ALTA reports are likely to have happened by the end of 2016 such that in early 2017 a 'scare' about a 'run away time accident' that will be viewed as 'threatening' in some manner over a 'wide region'. There are many new supporting sets for this 'run away time accident' which indicate it is NOT any that have been forecast by our reports. Rather the data would suggest that some level of our 'time accidents eat cafe crowd at lunch' scenario happens, then public becomes slowly aware by the many oddities that 'something (related to) time technology' and an 'accident' HAD occurred. So they/we become aware of this as a 'past incident'. Then in the course of early 2017 something new with many of the same base linguistics will 'surface suddenly' and the 'time accident' language shows up very rapidly, with high emotive sums, and in quantity all of which indicate that a big story at the presstitute media level will be in our faces in early 2017. And it will involve a 'threat' to a 'large region (of the planet)'. The data sets are suggesting that the 'threat' will be 'perceived' as 'real and present danger' such that 'migrations' and 'containment areas' are going to be within the language that shows up early next year.

SpaceGoatFarts entity is showing that the meta data layer of 'secrets revealed' is coming to the foreground of public attention over 2016 and growing thereafter. The data sets are suggesting that 'serious thought' by TPTB will be given to the idea of 'disclosure of alien presence' as an 'antidote' to the 'spreading economic downward spiral'. Other sets are suggesting that perhaps 'governments' and 'officialdom' will 'not be in charge' of the 'contact' meme as it 'comes into daily thought' over 2016. The data sets for "UFO's" have growth in sets that suggest that a 'new form (of UFO)' will be 'visible' over 2016 and thereafter. The descriptor sets have some language about a 'near organic form' that will 'hover about' and 'be seen to be observing (human activities)'. That the 'new form of UFO' has shown up now is indicated to be a 'point of fear' that will be 'leaked out' from some 'public statements' by 'officialdom'.

Longer term data is filling a number of sets that have the next four years being the time when the 'ET connection' comes out to 'daily', 'mainstream', 'common consensus' language. These sets are not directly related to the 'new UFO form' sets, but do have parallel growth rates as modelspace is moved forward over 2016. There are many cross links from the 'UFO' and 'ET' sets over to the 'economic destruction' sets that are showing that as the 'economic infrastructure degrades' many of the 'walls of security' will be 'left unfunded' and as a result 'shit happens'.

Conclusion: we're there, now.

Of course it makes sense that the 'horrors' of the 'crash' and the 'decades of struggle' here in USAPop would produce counterbalancing memes at all levels where the 'elite' had 'suckered society' or 'frozen development' or 'hid discoveries'. These counterbalancing social memes and movements are the positive part of a very dismal picture of these next few decades of life, here, on Terra.

The next 10/ten years are showing up in modelspace as being the 'decade of hard struggle' as not only the 'economic system' but the whole of the 'social contract' will have to be 'reconstructed from scratch'.

Lots of really really hard work.

One thing of the many admirable qualities of the taoist influenced mind is its ability to accept, and then get on past it. The taoist key discovery about life, universe and everything, is that 'the only thing humans can control, is their personal attitude'.

So, we are there, now. Time, to screw your attitude on tight, and get busy.

'nuff said.
